Department of Justice

ADJUSTMENT-TO-BASE ITEMS

The adjustment-to-base items listed in the estimates for various appropriations involve nondiscretionary expenses of the Department. These costs result primarily from statutes, Executive orders, and other Presidential directives that have Government wide application; in a number of cases resources are also requested to pay for the price increases of basic commodities and services. The items in these categories are reflected in the justification materials as "Increases" or "Decreases" in the justification of "Adjustments to base" portion of the each budget along with other nonrecurring items. The cost of the increases less the amounts identified as "Decreases" represent the net change to maintain the Department's 1998 level of operations. These computations, together with transfers, savings from management initiatives and adjustments in permanent positions, determine the base for 1998.

A. Adjustment-to-Base items required by statute, Executive Order, or other Presidential directive include costs that the Department must pay to implement Government-wide regulations and policies. These items are listed below with a brief statement relating to the statutory or other authority and any legal citation.

1. 1998 pay raises. This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy. The amount requested represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits.
2. Annualization of 1997 pay raises. This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. The amount requested represents the pay amounts for the first quarter of the year plus appropriate benefits.
3. Annualization of additional positions approved in 1997. This provides for the annualization of additional positions provided in 1997 Congressional Action. This request includes nonrecurring costs for one-time items associated with the increased positions.

4. Accident compensation (Federal Employees' Contributions Act -- Workers' Compensation). Public Law 89-554 provides that an employee who is injured in the performance of duty is to be furnished medical services and other benefits, and that these expenses, when authorized or approved by the Secretary of Labor, are to be paid by the Employees' Compensation fund (5 U.S.C. 8133). The Secretary is to furnish to each agency the payments made from the Fund applicable to each agency and such agency is to include in its annual budget estimates a request for an appropriation equal to such costs; when such sums become available, they are to be deposited to the credit of the Employee's Compensation Fund (5 U.S.C. 8147(b)). The request for 1998 reflects the actual billing based on costs incurred during 1996.

5. General Services Administration (GSA) Rent. Public Law 92-313, Public Building Amendments Act of 1972, authorizes and directs the Administrator of the General Services Administration (GSA) to charge for the use of space furnished. Additional space for new positions and other purposes is contained within each of the program requests. GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The increases vary based on the buildings that each organization is actually occupying.

B. Funds are required for other adjustment-to-base items not specifically mandated by statute, Executive Order, or other Presidential directive. These increases are necessary to maintain program at the previously requested or currently authorized level of operation. Some are particularly sensitive to price changes and all are mandatory to the extent that they involve cost increases that must be paid and their denial would adversely affect the health and welfare standards already established for prisoners, create pay inequities in the compensation of various categories of government employees, or significantly affect the level of activity provided by a program. In some instances, the increase requested consists of a mixture of costs increased by statute, Executive Order, or other government-wide regulations, as well as costs relating to market price changes, e.g., paper, fuel, and toll rate changes. The categories are itemized below.

1. Within-grade increases. This request provides for the expected increases in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The amount includes pay and benefits.

2. Foreign allowances. Standard regulations that apply to Government civilians in foreign areas state that certain allowances may be paid to personnel serving in civilian status overseas. These include: quarters allowance, post allowance, post differential and educational allowance. Amounts of these allowances, which are determined by the Department of State based on location, will increase by an average of 1.7 percent increase over the budgeted amount for 1996.

3. Medical Hospital Service costs. The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 5.3 percent based on the Consumer Price Index and is being applied against medical services for care of persons in the custody of the Department.

4. Mileage allowance rate increase. The mileage allowance rate has increased from 30 cents to 31 cents per mile. An increase is requested in 1998 to cover this rate adjustment.

5. Correspondence Management System. An increase is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.

6. Investigation/Reinvestigation. Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in an any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.

7. ICASS Increase for Staffing. Under the ICASS an annual charge will be made by the DOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, Department of State has provided an increased cost estimate for this organization in 1998.

8. Spectrum Frequency Management. Public Law 104-134 authorizes the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable frequency management, this funding is necessary to continued operations.

9. Northern Mariana Islands. Prior to 1998, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding is requested to maintain current efforts in CNMI.

10. General pricing level adjustments. This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

11. Other. These adjustments include: the Administrative Salary Increase, Jail Day Rate Increase, INTERPOL Dues and Security Guard Services.

C. Adjustments to base are made for non-policy decreases in both nonrecurring items and other items.

1. One-time transfer for High Intensity Drug Trafficking Areas (HIDTA) amount. The Office of National Drug Control Policy provided funding for HIDTA transfers in 1997. For 1998, these transfer amounts have not been determined and are not yet reflected in the components budget requests.

DEPARTMENT OF JUSTICE
1998 APPROPRIATION LANGUAGE CHANGES

The information provided below describes substantive changes from the Department of Justice Appropriations Act, 1997. Non-substantive changes such as new funding requests, changes in the number of motor vehicles, or changes in references to fiscal years are not included.

General Administration. Language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs. In addition, language providing anti-terrorism funding in 1997 to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Counterterrorism Fund. Language providing funding for restoration of offices and facilities damaged as a result of the bombing of the Alfred P. Murrah Building in Oklahoma City is proposed for deletion. Should additional funding be required for this purpose, the remaining language provides sufficient authority. In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Office of the Inspector General (OIG). Language is proposed to allow the Attorney General to transfer up to one-tenth of one percent of grant funds provided to the Department of Justice from the Violent Crime Reduction Trust Fund to the OIG for the audit or review of these grant programs as provided in section 130005 of the Violent Crime Control and Law Enforcement Act of 1994 (P.L. 103-322).

Administrative Review and Appeals. Language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Salaries and Expenses, General Legal Activities. Language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs. In addition, the authority to accept gifts to host the International Criminal Police Organization's American Regional Conference is proposed for extension through fiscal year 1998. Finally, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Salaries and Expenses, United States Attorneys. Language is proposed to expand the reference to intergovernmental agreements to ensure that cooperative agreements are included.

Language relating to debt collection functions has been simplified; however, no change in the functions performed is intended.

The provision allowing funding for the International Brotherhood of Teamsters to remain available until expended is proposed for deletion. The need for this provision will have expired in 1998.

The limitation on personnel resources for the U.S. Attorneys is proposed for deletion.

Language is proposed to request that \$6,000,000 for office moves, expansions and renovations remains available for two fiscal years to allow needed funding to remain available in the event of any construction slippages. This requirement is largely the result of new courthouses currently being constructed throughout the country.

Language is proposed that would make not to exceed \$8,000,000 for a D.C. Superior Court information systems strategy and not to exceed \$2,500,000 for the operation of the National Advocacy Center available until expended. These provisions ensure that funding remains available for these two purposes in the event of any procurement or activation delays.

Finally, language providing anti terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Violent Crime Reduction Programs (VCRP), United States Attorneys. Language is proposed to delete reference to specific funding for each of the various programs authorized in the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

Salaries and Expenses, United States Marshals Service (USMS) Language is proposed to add the phrase "not to exceed" to the provision relating to funding for the Justice Prisoner and Alien Transportation System is available until expended. This clarification is needed because the Department of the Treasury otherwise assumes that the "not to exceed" phrase applies only to the first amount in the provision.

Language is proposed to provide that not to exceed \$2,300,000 for construction costs in prisoner detention areas remains available until expended. This provision will preserve these funds in the event of any construction slippages.

Language is also proposed making the provision that allows the USMS to collect reimbursements for the transport of State and local prisoners permanent.

Finally, language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs.

Federal Prisoner Detention. Language, prohibiting the use of Federal Prisoner Detention funds for expenses related to the Cooperative Agreement Program, is proposed for deletion. This provision was enacted in 1997 for any appropriations thereafter.

Assets Forfeiture Fund. Language is proposed that removes subparagraph C dealing with the payments of awards. This proposed change implements section 114 of the Department of Justice Appropriations Act, 1997 (P.L. 104-208), which removed subparagraph C from the list of uses to be specified in annual appropriations acts.

Radiation Exposure Compensation Trust Fund (RECTF), Administrative Expenses. Language is proposed providing the 1999 requirement for the defense-related functions, in accordance with the biennial budgeting requirements for such functions.

Payment to RECTF. Language is proposed providing the 1999 requirement for the defense related functions, in accordance with the biennial budgeting requirements for such functions.

Interagency Crime and Drug Enforcement. The requested amount reflects the transfer to the Department of the Treasury and the Department of Transportation of the amounts for the 1998 operations of OCDE programs in those agencies. Enactment of this language would have the effect of superseding the language found in the Anti Drug Abuse Act of 1988 (P.L. 100-690, Title I, Subtitle B, section 1055(a)).

Federal Bureau of Investigation (FBI), Salaries and Expenses. Language is proposed clarifying the uses of funds made available until expended for fingerprint identification services and adding a provision to make not to exceed \$14,000,000 for research and development related to investigative activities available until expended. Deletion of the phrase "payments to" is proposed in order to make it clear that normal payments, such as those for State and local task forces, are not included in this limitation.

Language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs. In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

A provision is proposed limiting grants or subsidies to States and localities for ballistics imaging equipment in order to eliminate duplication of such grants or subsidies.

Finally, language is proposed providing the 1999 requirement for the defense-related functions of the FBI, in accordance with the biennial budgeting requirements for such functions.

FBI Telephone Carrier Compliance Fund (TCCF). Language is proposed deleting the phrase referring to section 110 of the Department of Justice Appropriations Act, 1997 (P.L. 104-208). Section 110 permanently amended the Communications Assistance for Law Enforcement Act; thus the reference is no longer needed.

In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Finally, language is proposed providing the 1999 requirement for the defense-related functions of the TCCF, in accordance with the biennial budgeting requirements for such functions.

VCRP, Federal Bureau of Investigation. Language is proposed deleting the provision related to the Brady Handgun Violence Prevention Act. No additional funding for this purpose is requested in 1998.

Drug Enforcement Administration. Language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs. In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

VCRP, Drug Enforcement Administration. Language is proposed providing limits on the number of passenger motor vehicles that may be purchased without regard to the annual general purchase price limitation.

Immigration and Naturalization Service (INS), Salaries and Expenses Language is proposed allowing for the care and housing of Federal detainees held in the joint INS and USMS Buffalo Detention Facility.

Language is proposed to allow not to exceed \$5,000,000 to fund or reimburse other Federal agencies for the care, maintenance and repatriation of smuggled illegal aliens.

A provision is proposed that permits the Attorney General to reallocate funds to the INS training program from other INS programs in order to pay costs associated with immigration officer basic training. Associated with this provision is the proposed deletion of language that provided up to \$10,000,000 for basic officer training.

Language is proposed that would allow the INS commissioner to pay more than \$30,000 to any INS employee for annual overtime costs on a calendar year basis if the commissioner determines that failure to do so would harm enforcement or service activities.

Three provisions are proposed for deletion: the first limits funds for San Clemente and Temecula checkpoints unless the checkpoints are being operated on a continuous 24-hour basis; the second is no longer required because the Land Border Fee Pilot Project has been extended through fiscal year 1999; and the third is no longer required because all balances from the Community Relations Service for the Cuban Haitian Entrant Program have been transferred to INS.

Language is proposed deleting the provisions limiting the operations of the Offices of Legislative and Public Affairs. In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

VCRR, Immigration and Naturalization Service. Language is proposed to delete reference to specific funding for each of the various programs authorized in the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

Federal Prison System, Salaries and Expenses (FPS, S&E). Provisions requiring the inclusion of the National Institute of Corrections (NIC) in the FPS, S&E budget and directing the transfer of NIC balances to the FPS, S&E are proposed for deletion. These provisions are no longer required because the language referred to "hereafter", and these actions have been implemented.

Buildings and Facilities. Language is proposed to delete reference to renovation and construction of USMS prisoner-holding facilities. This funding is now requested in the USMS appropriation.

Office of Justice Programs (OJP). Language is proposed to add \$25,000,000 for the National Sexual Offender Registry. In addition, language providing anti-terrorism funding in 1997, to respond to several terrorist incidents, under the emergency requirement of the Balanced Budget and Emergency Deficit Control Act, is proposed for deletion.

Community Oriented Policing Services: Language is proposed to provide specific amounts for each education, training and service program proposed to be funded. Language is also proposed for the new Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program, which will provide grants to prosecutorial offices to target gangs, gang violence and other violent juvenile crime.

VCRP, State and Local Law Enforcement Assistance: Language is proposed to delete funding for the Local Law Enforcement Block Grants. No funding is requested for this program in 1998.

Language is proposed to provide both formula and discretionary grant funding for the Edward Byrne Memorial State and Local Law Enforcement Assistance program. Language is proposed to include within the formula grant \$30,000,000 exclusively for State drug testing. All funds for the Byrne grant program are requested from the Violent Crime Reduction Trust Fund in 1998.

Two provisions, dealing with the availability of Violent Offender Incarceration and Truth in Sentencing Incentive grants are proposed for deletion. One of these provisions made funding available to California for incarceration of criminal aliens. The other provision was made permanent by language providing no funds to States for 1999 and thereafter unless drug testing programs have been implemented.

Language that provided \$200,000 for a National Baseline Study on Campus Sexual Assault is proposed to be deleted. This funding was provided for a one-time study in 1997 and is no longer needed in 1998.

Language is proposed to include \$50,000,000 for the Violent Youth Court Program pursuant to section 210802 of the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

Language is proposed to include \$8,000,000 for Assistance to Delinquent and At-Risk Youth pursuant to section 30702 of the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

Language is proposed to include \$1,000,000 for treatment of tuberculosis among inmates of correctional institutions pursuant to section 32201(c)(3) of the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

Language is proposed to provide \$500,000 for the Presidential Summit on Crime and the National Commission on Crime Prevention pursuant to section 270009 of the Violent Crime Control and Law Enforcement Act of 1994 (Pub. Law 103-322).

A provision, allowing the merger of balances for the programs now funded from this appropriation, is proposed to be deleted. This merger of balances has been implemented, and the provision is no longer needed.

A provision requiring a net increase in the number of non-administrative public safety officers that result from the use of these funds is proposed for deletion.

OJP, State and Local Law Enforcement Assistance: Language is proposed to be eliminated since all program funds are requested under the VCRP in 1998.

OJP, Juvenile Justice Programs: Language referring to title V of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, is proposed for deletion. Language is proposed that would provide \$75,000,000 for a new program, the Anti-Tuancy, School Violence and Crime Intervention Program, which is requested in the place of the title V programs.

A provision that provided funds for programs that assure accountability based sanctions for delinquent actions is proposed for deletion.

Public Safety Officer Benefits: A provision is proposed to provide \$2,000,000 for the Federal Law Enforcement Assistance Program, as authorized by section 1212 of the Anti-Drug Abuse Act of 1988 (P.L. 100-690). In addition, several language changes are proposed in order to incorporate this new program. These changes are intended to make no substantive changes.

GENERAL PROVISIONS - DEPARTMENT OF JUSTICE

The following sections are proposed for 1998. Sections 101 through 107 are substantively unchanged from the 1997 enacted provisions.

Section 101, states that a total of not to exceed \$45,000 from funds appropriated to the Department of Justice in this title shall be available to the Attorney General for official reception and representation expenses in accordance with distributions, procedures, and regulations established by the Attorney General. is unchanged from the 1997 provision.

Section 102 continues the authorizations contained in Public Law 96-132, "The Department of Justice Appropriation Authorization Act, Fiscal Year 1980" until the termination date of this Act or until the effective date of a Department of Justice Appropriation Authorization Act, whichever is earlier. This section also is unchanged.

Section 103, (section 104 of the 1997 Act) which is unchanged, states that none of the funds appropriated under this title shall be used to require any person to perform, or facilitate in any way, the performance of an abortion.

Section 104 (section 105 of the 1997 Act) states that nothing in the preceding section shall remove the obligation of the Director of the Bureau of Prisons to provide escort services necessary for a female inmate to receive such service outside the Federal facility, and that nothing in this section in any way diminishes the effect of section 103 intended to address the philosophical beliefs of individual employees of the Bureau of Prisons.

Section 105 (section 106 of the 1997 Act) states that not to exceed \$10,000,000 of the funds appropriated to the Department of Justice in this Act shall be available for publicly-advertised, extraordinary rewards, which are not subject to the limitations found in 18 U.S.C. 3059 and 3072. Any rewards of \$100,000 or more, up to a maximum of \$2,000,000 must be personally approved by the President or the Attorney General. This section also is unchanged.

Section 106 (section 107 of the 1997 Act) states that not to exceed 5 percent of any appropriation made available for the current fiscal year for the Department of Justice in this Act, including those derived from the Violent Crime Reduction Trust Fund, may be transferred between such

appropriations, but no appropriation, except as otherwise specified, shall be increased by more than 10 percent by such transfers. Any transfers pursuant to this section must be treated as a reprogramming of funds under section 605 of this Act. This section also is unchanged.

Section 107 (section 108 of the 1997 Act) amends 28 U.S.C. 524(c)(8) by striking "1996" and inserting "1997 and thereafter." This updates the availability of Assets Forfeiture Fund Super Surpluses for distribution by the Attorney General.

Section 108 amends section 151 of the Foreign Relations Authorization Act by inserting "the Federal Bureau of Investigation" after "Drug Enforcement Administration." This will provide special allowances for FBI agents in hazardous duty locations outside the United States.

Section 109 extends the authorization for payments under the Communications Assistance for Law Enforcement Act through 2000. This authorization otherwise expires in 1998.

Section 110 amends the Victims of Crime Act (VOCA) of 1984. This provision repeals Section 1402(d)(1) of VOCA and authorizes the use of unexpended Crime Victims Fund dollars previously available to the Administrative Office of the United States Courts for Federal system improvements to be used for Crime Victims Fund purposes.

Section 111 amends the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 to make the limitation on overtime payments to INS employees consistent with that found in the Department of Justice Appropriations Act, 1997 (P.L. 104-208).

Section 112 amends the Immigration and Nationality Act of 1952, as amended, by including cruise ship passengers, previously exempt from inspection fees, to be assessed such fees; strikes the authorization stating that section 245(i) receipts will be deposited into the Immigration Detention Account; amends the authorization of the Breached Bond/Detention Fund (Fund) to give the Attorney General control of receipts in the Fund account; and requires depositing receipts collected under the provisions of section 245(i) to now be deposited into the Breached Bond/Detention Fund.

Section 113 repeals the sunset provision pertaining to section 245(i) of the Immigration and Nationality Act of 1952, as amended. The provisions of this section currently apply through September 30, 1997.

Section 114 gives the authority to the Attorney General to declare an immigration emergency. This authority was previously reserved to the President.

The following sections are proposed for deletion and do not appear in the 1998 request. The section numbers are those in the 1987 Appropriations Act. Most of these sections amend the underlying statute or are permanent authorities and, thus, do not need to be continued.

Section 103 prohibits the use of Department of Justice funds to pay for an abortion. The Administration plans to work with Congress to address this issue.

Section 109 permanently amended various sections of title 28, United States Code changing the U.S. Trustee's fee structure and funding. Therefore, this section is no longer required.

Section 110 permanently amended the Communications Assistance for Law Enforcement Act (P.L. 103-414). Further changes are not needed.

Section 111 provided the sense of the Congress that the Drug Enforcement Administration should take the necessary actions to end the illegal importation of Rohypnol, a drug frequently distributed with the intent to facilitate sexual assault and rape.

Section 112 permanently amended the Victims of Crime Act of 1984 to permit the use of resources for the assistance of victims of the bombing of the Alfred P. Murrah Federal Building in Oklahoma City to facilitate the observation and or participation of such victims in trial proceedings arising from the bombing.

Section 113 permanently amended P.L. 104-132 to require reporting and a special study on the use of various detection devices and techniques in order to prevent and solve acts of terrorism.

Section 114 permanently amended 28 U.S.C. 524 (c)(1) to delete rewards from the list of expenses to be paid from the Assets Forfeiture Fund appropriation. Rewards will now be paid from Assets Forfeiture Fund management expenses.

Section 115 allows the reimbursement of Federal, State and local taxes to employees who are traveling on temporary duty on behalf of the United States for 1997 and thereafter.

Section 116 permanently amends 28 U.S.C. 524 to allow the acceptance of gifts, devises and bequests of any property for the purposes of aiding or facilitating the work of the Department of Justice

Section 117 permanently amends 28 U.S.C. 524 to allow the Attorney General to warrant clear title to purchasers of forfeited property. It also allows for a one-time transfer in 1997.

Section 118 permanently amends 28 U.S.C. 594 dealing with the requirements of the independent counsel.

Section 119 enacted permanent legislation, the Age Discrimination in Employment Amendments of 1996.

Section 120 permanently amended the Violent Crime Control and Law Enforcement Act of 1994

Section 121 enacted permanent legislation, the Child Pornography Prevention Act of 1996.

General Administration
Salaries and Expenses
Summary Statement
Fiscal Year 1998

The General Administration appropriation is requesting a total of \$79,959,000, 649 positions, and 670 workyears in 1998. This request represents an increase of \$86,000, 16 positions, and 16 workyears from the 1997 appropriation enacted.

The primary mission of the General Administration appropriation is to support the Attorney General and Department of Justice senior policy level officials in managing Department resources and developing policies for legal, law enforcement, and criminal justice activities. Providing administrative support services to the legal divisions and policy guidance to all Department organizations is also part of the primary mission of this appropriation. The missions of this appropriation are accomplished through the decision unit activities of Program Direction and Policy Coordination. The major 1998 initiatives and resource requests for these activities are summarized below.

Program Direction and Policy Coordination

This budget activity includes resources for the offices that support the following programs: Department Leadership, Executive Support, Intelligence Policy and Professional Responsibility, and the Justice Management Division.

The Department Leadership program consists of the Offices of the Attorney General, the Deputy Attorney General, and the Associate Attorney General. These offices are responsible for developing policies regarding the administration of justice in the United States; representing the United States before foreign governments and international organizations; and advising the President, the Vice President, the Congress, and the heads of Executive departments and agencies. The Department Leadership request reflects a program increase of \$1,633,000, 14 positions, and 14 workyears for the restoration of the Office of the Associate Attorney General. Congressional action provided no resources specifically for the Associate's Office in 1997.

The Executive Support program consists of the Office of Policy Development, the Office of Public Affairs, the Office of Legislative Affairs, and the Office of Intergovernmental Affairs. The Office for Information and Privacy is funded on a reimbursable basis. The Executive Support program has several missions. These include conducting legal and policy analysis in support of Department initiatives; providing policy guidance to the Department's senior officials; representing the Department before Congress; and advising legislative goals by presenting its positions clearly and well to the Office of Management and Budget and Congress. Informing Department personnel, the media, and the public of Department activities; advising the Attorney General and other Department officials in their dealings with the media and Congress; acting as a liaison with Federal, State, local, and international governments and law enforcement officials; and acting as a liaison among other officials, professional groups, and the White House Office of Intergovernmental Affairs. The Executive Support request reflects a program increase of \$19,000 to provide the Office of Public Affairs funding to support its authorized FTE level.

The Intelligence Policy and Professional Responsibility Program consists of the Office of Intelligence Policy and Review and the Office of Professional Responsibility (OPR). This program is responsible for the coordination, development, and implementation of Departmental policy on intelligence and national security matters. The responsibility for strengthening the integrity of and maintaining public confidence in the Department of Justice, as well as fostering a commitment to ethical principles among all Department employees, also falls within the realm of this decision unit. A program increase of two positions, two FTE, and \$426,000 is requested which will enable OPR to more rapidly investigate allegations of attorney misconduct.

The Justice Management Division is responsible for ensuring that the management initiatives of the President, the Attorney General, and the Department are implemented soundly and responsibly. The JMD provides administrative support and policy guidance to Department organizations efficiently and effectively. The JMD provides organizations with policy guidance and/or direct support in the areas of personnel, equal employment opportunity, training, procurement, management, budget, financial policy, facilities planning, and security.

Proposed Changes in Appropriation Language

The 1998 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

<p>for expenses necessary for the administration of the Department of Justice, (879,873,000) ; of which not to exceed \$3,317,000 is for the facilities Program 2000, to remain available until expended [Provided, that not to exceed 43 permanent positions and 44 full-time equivalent workyears and</p>	\$79,959,000
---	--------------

\$7,477,000 shall be expended for the Department Leadership Program, exclusive of augmentation that occurred in these offices in fiscal year 1996; provided further, that not to exceed 41 permanent positions and 48 full-time equivalent workyears and \$4,600,000 shall be expended for the Offices of Legislative Affairs and Public Affairs: Provided further, that the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or non-reimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis.)

(For an additional amount, for enhancements for the Office of Intelligence Policy and Review and security measures, \$3,600,000; of which \$2,170,000 is for security enhancements: Provided, that the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balance Budget and Emergency Deficit Control Act of 1985, as amended.) (Department of Justice Appropriations Act, 1997)

Justification of Adjustments to Base
(Dollars in Thousands)

Transfers To and From Other Accounts:

1. Drug Testing Initiative
Base funding for the drug testing initiative for persons arrested and convicted of Federal offenses moved to the Office of Justice Programs (OJP) (4,700)

Increases

1. 1998 pay raise \$1,061

This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$1,061,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$835,000 for pay and \$226,000 for benefits)

2. Annualization of 1997 Pay Raise 348

This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent estimated to be effective January 1997. The amount requested \$148,000, represents the pay amounts for three quarters of the year (\$273,000 for compensation and \$75,000 for benefits)

3. Within-Grade Increase (WIGI) 974

This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$767,000 for pay and \$207,000 for benefits

4. Annualization of 4 Additional Positions Approved in 1997 2 150

This provides for the annualization of 4 additional positions provided in 1997 Congressional Action for security enhancements within the Department. This request includes nonrecurring costs for one-time items associated with the increased positions

	Approved 1997 Increases	Annualization Required
Annual salary rate of 4 approved positions	237,796	
less Lapse (50%)	(118,898)	118,898
Net Compensation	118,898	
Associated employee benefits	31,102	31,102
Total costs subject to annualization	150,000	150,000
		12

5	Accident Compensation	23
	This increase reflects the billing provided by the Department of Labor for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$21,000	
6	Travel Mileage Allowance Rate	5
	The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$5,000 is requested in 1998 to cover this rate adjustment	
7	Correspondence Management System	\$257
	An increase of \$257,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, which provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability, was funded from Working Capital Fund unobligated balances in the past. Since this source of funding is no longer available, another funding source is needed	
8	Investigations / Reinvestigations	3
	Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in an any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees	
9	General Pricing Level Adjustments	84
	This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.8 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities	
10	Spectrum Frequency Management	3
	Public Law 104-134 authorizes the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable frequency management, this funding is necessary to continued operations. Funding of \$3,000 is requested for General Administration	
	Total Increases	2 2,908
	Total Adjustments to Base	2 (1,792)

BASE PROGRAM DESCRIPTION:

The Department Leadership Program consists of the Office of the Attorney General, the Office of the Deputy Attorney General, and the office of the Associate Attorney General

The general goals and objectives of the Department Leadership Program are:

- To advise the President on Constitutional matters and legal issues involving the execution of the laws of the United States
- To formulate and implement policies and programs that advance the administration of justice in the United States
- To manage the Department of Justice
- To provide executive-level leadership in the continuing war on drugs, combating violent crimes, investigating and prosecuting fraud and other white collar crimes, diminishing prison overcrowding, protecting our Nation's borders, and enforcing environmental and civil rights laws
- To provide executive-level oversight and management of international law enforcement training and assistance, financial institutions, reform, recovery, and enforcement programs, and investigative policy
- To coordinate criminal justice matters with Federal, State, and local law enforcement and criminal justice agencies
- To investigate, process, and make recommendations to the President on candidates for judicial and Justice Department Presidential appointments
- To maintain and supervise the Attorney General's Honor Law Graduate and Attorney Employment program
- To prepare and disseminate an Annual Report to the Congress and the public regarding the programs and accomplishments of the Department of Justice

PROGRAM CHANGES

	Perm Pos	FTE	Amount
Restoration of the Associate's Office	14	14	\$1,633

A program enhancement of 14 positions, 14 FTE, and \$1,633,000 is requested for the restoration of the Office of the Associate Attorney General in 1998. The Department strongly opposed the Congressional action that eliminated this office in 1996. This office is essential to the effective operation of the Department, particularly in view of the dramatic increases in Crime Trust Fund programs, and associated resources, that have been provided to the Department. These additional program have dramatically increased the need for coordination and policy-level oversight. This office provides invaluable assistance to the effective delivery of Departmental services. For these reasons, restoration of this office is requested for 1998.

BASE PROGRAM DESCRIPTION:

The Executive Support program consists of the Offices of Policy Development (OPD), Public Affairs (OPA), Legislative Affairs (OLA), and Intergovernmental Affairs (IGA). These offices are responsible for serving as the liaison between the Department and Congress, coordinating Department and Administration policy initiatives in the areas of civil and criminal justice, and ensuring that the public and the news media are kept informed about the activities and policies of the Department, the Attorney General, and the Administration in the fields of law enforcement and legal affairs.

The general goals and objectives of the Executive Support Program are:

- To improve the Department's effectiveness in providing substantive and timely input on the Administration's law enforcement initiatives as well as other legislative proposals affecting Department responsibilities
- To improve the process of reviewing and clearing through the Department legislative proposals initiated by other agencies within the Administration
- To maintain an efficient and responsive legal/law liaison service operation
- To handle the processing of judicial and other nominations efficiently and responsively
- To provide support in advancing the Administration's overall legislative agenda
- To assure policy consistency and coordination of Departmental initiatives, briefing materials, and policy statements
- To disseminate timely, accurate information about the Department, the Attorney General and the Administration's law enforcement priorities, policies and activities to the news media and the general public
- To enhance and promote the enforcement goals of the Department through distribution of news releases, coordinating press conferences and telephone and video conferences announcing indictments, settlements, and statements on civil rights, environment, criminal, anti-trust, and other Department enforcement activities

To ensure that all applicable laws, regulations and policies involving the release of information to the public are followed so that material is not made public that might jeopardize investigations and prosecutions, violate rights of defendants or potential defendants or compromise national security interests

PROGRAM CHANGES

Perm Pos.	FTE	Amount
...	...	\$ 319

OPA to Fund Function at Current FTE Levels

OPA reflects a program change of \$319,000. OPA acknowledges that it has adequate positions and FTE, but is deficient in funding to support these levels. The amount requested is necessary to allow OPA to fully fund its function and mission at its current position and FTE levels. The Office of Public Affairs is the principal point of contact for the news media and the public. This office is responsible for ensuring that both the public and the news media are kept informed about the activities and policies of the Department, the Attorney General and the Administration in the fields of law enforcement and legal affairs. OPA prepares and issues news releases and press statements, coordinates press conferences, arranges interviews, responds to inquiries from the media and the public, and reviews and disseminates press clips and other information on media coverage to the Justice Department. This increase will allow OPA to ensure that all applicable laws, regulations and policies involving the release of information to the public continue to be followed so that material is not made public that might jeopardize investigations and prosecutions, violate rights of defendants or potential defendants or compromise national security interests. OPA must be able to react and respond at a moment's notice to events of the day, often stretching administrative resources to the limit.

Increase / Decrease		2	426

BASE PROGRAM DESCRIPTION:

The Intelligence Policy and Professional Responsibility Program consists of the Offices of Intelligence Policy and Review, and Professional Responsibility. These Offices are responsible for assisting the Attorney General and other senior Department and Executive Branch officials in ensuring that the national security-related activities of the United States are consistent with relevant law, and overseeing the investigation of allegations of criminal and ethical misconduct by the Department's attorneys, criminal investigators, or other law enforcement personnel.

The general goals and objectives of the Intelligence Policy and Professional Responsibility Program are:

- To provide legal advice concerning intelligence and national security matters to the Attorney General and to other Executive Branch officials
- To participate in the development of legal aspects of national security and intelligence policy
- To prepare FBI and other applications for intelligence searches and surveillance and approve other counterintelligence investigative activities
- To represent intelligence agencies as legal counsel before the United States Foreign Intelligence Surveillance Court.
- To participate in pre-trial litigation involving the Foreign Intelligence Surveillance Act in criminal prosecutions for espionage and international terrorism.
- To maintain liaison with the Senate Select Committee on Intelligence and the House Permanent Select Committee on Intelligence to ensure they are apprised of Departmental views on national security and intelligence policy and are appropriately informed regarding operational intelligence and counterintelligence activities
- To improve and refine the Department-wide reporting system in which allegations of criminal or administrative misconduct against Department employees are reported, investigated and monitored

To conduct, oversee, and coordinate all internal investigations of serious allegations concerning the conduct of Department personnel that may be in violation of law, Department regulations or orders, or applicable standards of conduct, and which affects the Department's ability to investigate, litigate, or prosecute

- Please note that the objectives of the Office of Professional Responsibility (OPR) are different from the Office of the Inspector General (OIG) in that OPR focuses on investigations concerning allegations of misconduct which affect the ability of the Department to investigate, litigate, or prosecute, while the OIG focuses its investigations on allegations of waste and abuse, and other matters which do not implicate the ability of the Department to investigate, litigate, or prosecute

PROGRAM CHANGES

	Perm Pos.	FTE	Amount
Increased Staffing for OPR	2	2	426

To enable OPR to wholly and successfully fulfil its mission, OPR has requested two positions, two FTE, and \$426,000 in funding for the hiring of a GS-15/10 attorney and an additional support staff person. The funding requested includes salary, benefits, travel, space, and other miscellaneous costs necessary to fund both new and existing staff. The increase to OPR will allow for continued, rapid investigations of attorney misconduct in the Department. A quicker OPR response to allegations of misconduct would serve as a much more effective deterrent to those prosecutors who would abuse their authority. Moreover, the allegations themselves bring the integrity of the judicial system into question regardless of their merit, and the public's confidence in the Department can be more swiftly restored if allegations do not appear to languish.

BASE PROGRAM DESCRIPTION:

The Justice Management Division provides advice to senior DOJ officials and develops departmental policies in the areas of management and administration, ensures compliance by DOJ components with departmental and other Federal policies and regulations, and provides a full range of management and administrative support services

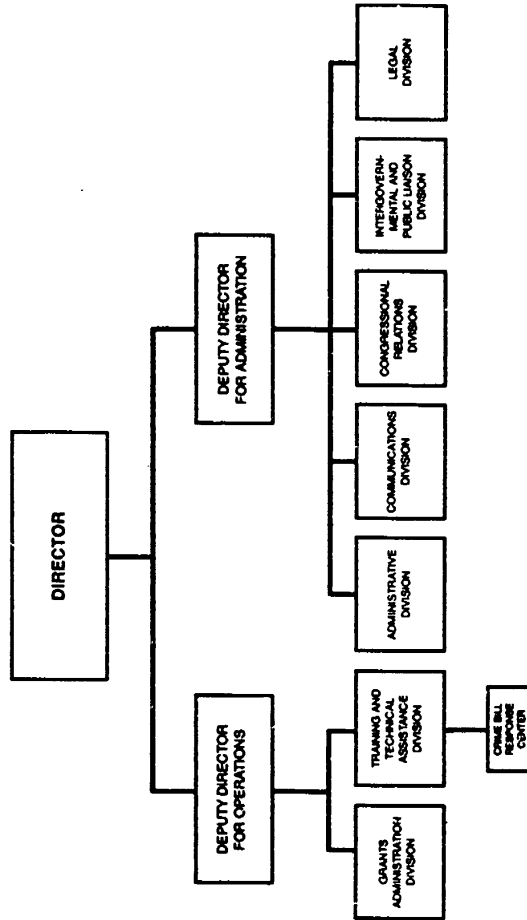

The general goals and objectives of the Justice Management Division are:

- To effectively establish Department policy, advise the Department leadership, and represent the Department on all matters pertaining to its organization, management, and administration
- To acquire quality, cost-effective automated systems and products that meet user needs and to manage and provide support for those systems
- To secure sufficient resources through budget and procurement processes and to ensure sound fiscal management of those resources
- To recruit, train, and retain a high quality workforce, provide safe, accessible, and environmentally sound work space, and promote workplace policies that contribute to employee effectiveness and satisfaction
- To increase the number of women and minority hires in key occupations and ensure the timely adjudication of EEO complaints

OFFICE OF COMMUNITY ORIENTED POLICING SERVICES

Approved by:  Date: 9/2/96
 JANET RENO
 Attorney General

**Community Oriented Policing Strikes
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

The Office of Community Oriented Policing Services (COPS) is requesting, for 1998, a total of \$1,545,000,000, 329 positions, and 286 workyears. This request represents an increase of \$125,000,000, 143 positions, and 112 workyears over the 1997 enacted level.

The Violent Crime Control and Law Enforcement Act of 1994 established a six year program to place 100,000 new police officers and sheriffs' deputies on the street to work with citizens to fight crime. The COPS program serves as a critical component of the Administration's strategy to fight violent crime by assisting in the promotion of community policing in areas burdened with problems of drug use and crime, and by supporting local efforts to reduce crime and violence and improve significantly the quality of life in neighborhoods and communities throughout the Nation.

The COPS program includes six budget activities: Public Safety and Community Policing Grants, Police Corps, Law Enforcement Scholarship Program, Police Recruitment Grants, Prosecutorial Initiatives, Targeting Gang Crime and Violent Juveniles, and Management and Administration. The primary initiatives and resource requests for these activities are summarized below.

The Public Safety and Community Policing Grants program provides resources to State, local, and Indian tribal governments to put additional cops on the beat to make our streets safe from crime and violence. This program also provides resources to local law enforcement agencies to design and implement innovative and comprehensive programs to target persistent public safety problems. COPS funds a nationwide program of training and technical assistance to support the implementation of community policing, and a research and evaluation agenda to identify successful community policing approaches to reducing drug-related and other violent crimes. A total of \$1,400,000,000 is requested for the Public Safety and Community Policing Grants program in 1998. This total includes \$1,371,865,000 for the Public Safety and Community Policing Grants program, and 309 positions, 276 workyears, and \$28,135,000 for Management and Administration support.

The Police Corps program will increase the number of police with advanced education and training, and provide educational assistance to students who possess a sincere interest in public service in the form of law enforcement. The program, which requires a four year service obligation by scholarship recipients, is expected to provide the necessary incentives to attract and retain young men and women to a career in law enforcement. A total of \$20,000,000 is requested for this program in 1998.

The Law Enforcement Scholarship Program would enable individuals to receive scholarship grants while employed as police officers. This program, like the previously successful Law Enforcement Education Program, would allow police to increase their educational opportunities, and is critical to enhancing State and local law enforcement recruitment, retention, and education. A total of \$20,000,000 is requested to establish and implement this program in 1998.

The Police Recruitment Grants program is designed to recruit and retain applicants to police departments. The program would provide recruiting services, which include tutorial programs to enable individuals to meet police force academic requirements and to pass entrance examinations; counseling for police

applicants who may encounter problems throughout the application process, and retention services to assist individuals to stay in the application process of a police department. A total of \$5,000,000 is requested to establish and implement this program in 1998.

The Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program is designed to provide grants directly to prosecutorial offices for at least 1,000 new initiatives to target gangs, gang violence, and other violent juvenile crime. When necessary for the implementation of this program, funds may be used to hire gang prosecutors, buy technology and equipment, and state of the art training. This program will help facilitate the cooperation and coordination of prosecutors and police with school officials, probation officers, youth and social service professionals, and community members in the effort to reduce the incidence of gang activity and violent juvenile crime, increase proactive identification of high risk youth, and speed the prosecution of violent juvenile offenders. The prosecutorial offices, through these partnerships, will identify high risk juveniles and law enforcement services, resources and referrals, and alternative activities in the interest of reducing gang-related and violent juvenile crime. A total of \$100,000,000 is requested to establish and implement this program in 1998. This total includes \$95,000,000 for the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program, and 20 positions, 10 workyears, and \$5,000,000 for Management and Administration support.

A total of 329 positions, 286 workyears, and \$33,135,000 is requested for Management and Administration to support these programs. This total includes 88 positions and 88 workyears to support grant accounting services performed by the Office of Justice Programs, Office of the Comptroller, for COPS grantees, and 20 positions, 10 workyears, and \$5,000,000 to implement the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program.

**Community-Oriented Policing Services
Salaries and Expenses**
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.]

Salaries and Expenses

For activities authorized by the Violent Crime Control and Law Enforcement Act of 1994, Public Law 103-322 (the 1994 Act), (including administrative costs) \$1,545,000,000. This amount is derived from the Violent Crime Control and Law Enforcement Act of 1994, Public Law 103-322, Section 101, which authorized that the Violent Crime Reduction Trust Fund, for Public Safety and Community Policing Grants pursuant to title I of the 1994 Act: Provided, That not to exceed [1997] permanent positions and 1753 full-time equivalent workers and \$39,800,000 shall be expended for program management and administration. [The amount for administrative costs shall be \$1,545,000,000.] Activities authorized by the 1994 Act, \$20,000,000 for the Police and Service Act, title I, section 201, 200113 of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), \$20,000,000, to remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund.

(P.L. 104-208; Violent Crime Control and Law Enforcement Act, 1994, 110 Stat. 3009; Department of Justice Appropriations Act, 1997.)

Explanation of changes

1. No substantive changes are proposed.

Program Performance Information
Government Performance and Results Act Requirements

Mission: The Office of Community Oriented Policing Services (COPS) is dedicated, through partnerships with communities, policing, and other public and private organizations, to the goal of improving significantly the quality of life in neighborhoods and communities throughout the Nation.

This goal will be accomplished by translating the concept of community policing into practice and action in order to reduce levels of violence, crime and disorder through the application of proven, effective programs and strategies. The needs of customers will be met through innovation and responsiveness. The workplace environment will encourage creativity, open communication, full participation, and problem solving.

Finally, these responsibilities will be carried out through a set of core values that reflect the commitment to the highest standard of excellence and integrity in public service. The values we will adhere to are: innovation; effectiveness; flexibility; principle oriented; and service-oriented.

Organizational Goals:

1. Increase America's cops on the beat by 100,000
2. Promote community policing by supporting innovative strategies that foster community partnerships and problem solving.
3. Reinforce partnerships and activities that will permanently sustain community policing.
4. Evaluate and demonstrate the effectiveness of community policing to improve the quality of life by reducing the levels of disorder, violence, and crime in our communities.

1998 Base	1,379,447
1998 Estimate	1,371,865
Increase/Decrease	(7,582)

BASE PROGRAM DESCRIPTION: The Public Safety and Community Policing Grants decision unit includes three critical program areas: COPS Hiring Program, COPS Innovative Programs, and COPS Training, Technical Assistance, and Evaluation.

BASE PROGRAM DESCRIPTION: COPS Hiring Programs. The general goal of COPS Hiring Programs is to design, implement, and support discretionary grant programs that provide 100,000 additional police officers and sheriff's deputies to communities throughout America. Under the authorizing statute, at least 85% of the funds available are to be applied to grants for the hiring, rehiring and redeployment of officers through procuring of related equipment and technology, civilian hiring, or the payment of overtime. For FY 1998, a total of \$1,338,064,000 (\$1.4 billion less amount allocated for Management and Administration and Training, Technical Assistance, and Evaluation) in base funding would support COPS Hiring Programs.

FY 1995 Goal: To provide funding to support the hiring of approximately 20,000 new officers to participate in community policing.

- As a primary activity, the Office of Community Oriented Policing Services provides competitive grants to states and localities to hire and rehire law enforcement officers. Officers hired under these grants are to participate in community policing to combat crime and improve the quality of life in the Nation's cities, towns and rural areas. At least 85% of the total grant program funds must be used for this purpose. Throughout the authorized life of this program, the COPS Office seeks to support the hiring of an additional 100,000 law enforcement officers, thereby increasing the number of cops on the beat by almost 17% over 1994 levels by the end of FY 2000. In FY 1994 the Department of Justice funded 2,020 officers under the

Police Hiring Supplement. In FY 1995, COPS funded a total of 23,871 additional police officers and sheriff's deputies by the end of the fiscal year. An estimated cumulative total of 25,891 additional officers were funded at the end of FY 1995.

- Five phases of funding achieved this goal. Each provided Federal funds not exceeding 75% of the total costs of the program or activity funded, unless waived. Hiring grants were made up to 75% of the salary and benefit costs of each officer over three years, not to exceed \$75,000 per officer. The five phases were

- 1) COPS Phase I (funding of 392 agencies from previous applications under the Police Hiring Supplement). COPS Phase I provided \$200 million in funding to 392 jurisdictions that had previously applied under the Police Hiring Supplement Program. Grants supported the hiring or rehiring of 2,700 law enforcement officers. Grantees, as announced in October 1994, have hired and deployed over 1,600 officers to date.
- 2) COPS AHEAD (Accelerated Hiring, Education, and Deployment) program for jurisdictions serving 50,000 or more in population. COPS AHEAD was announced in October 1994 to permit interested agencies to begin recruiting and hiring new officers prior to submission and approval of a formal grant application. Six hundred and thirty-two jurisdictions were given authorization on December 18, 1994 to hire up to 2.5% of their October 1 sworn force level. Over 500 of the agencies formally applied and received funding to continue their plans to deploy over 4,000 officers into community policing activities. Approximately \$294 million of FY 1995 program dollars was dedicated to funding the three-year COPS AHEAD grants.
- 3) COPS FAST (Funding Accelerated for Smaller Towns) program for jurisdictions fewer than 50,000 in population. COPS FAST was announced in November 1994 as a hiring grant program targeted at police agencies serving populations under 50,000. Over 7,000 one-page applications were received by the December 31, 1994 deadline. On February 8, 1995, 6,660 jurisdictions were selected to receive COPS FAST funding, supporting over 7,000 officers for \$410 million.
- 4) COPS MORE (Making Officer Redeployment Effective) program. COPS MORE was announced in December 1994 as a program designed to expand the time available for community policing by current law enforcement officers, rather than funding the hiring or rehiring of additional law enforcement officers. These grants were used to purchase equipment and technology, to procure support resources (including civilian personnel), and to pay overtime. The authorizing statute permits up to 20% of hiring grant funds to be used for these purposes in FY 1995 and FY 1996. Applicants were required to demonstrate how funds will result in actual increases in the number of officers deployed in community policing equal to, or greater than, the number of officers which would result from grants of the same amount for hiring new officers. Over 2,200 applications were reviewed. Grants were announced through 1995 and 1996.
- 5) COPS Universal Hiring program. The COPS Universal Hiring Program was announced in June 1995. This program is open to all policing agencies and to applicants seeking to start a new department. There are no population restrictions. It is anticipated that Universal Hiring will

be an ongoing program, with multiple application deadlines and funding rounds into future years. Current COPS grantees will be contacted separately as they will not be required to submit a full application again.

FY 1996-98 Goals: To support the continued hiring of police officers toward the goal of funding an additional 100,000 police officers by the end of FY 2000. In FY 1996, COPS funded a total of 23,776 additional police officers and sheriff's deputies by the end of the fiscal year. The COPS Office funded an estimated cumulative total of 49,667 additional officers by the end of FY 1996. The COPS Office will fund a cumulative total of approximately 64,000 additional police officers and sheriff's deputies by the end of FY 1997. The FY 1998 request level would fund an estimated 17,000 additional officers in FY 1998.

- The COPS Office will continue the Universal Hiring program as its primary hiring grant mechanism. The Universal Hiring program includes applications submitted by agencies or communities not currently COPS grantees, as well as current COPS grantees seeking additional resources. In the latter cases, the COPS Office will rely upon the previously submitted Community Policing Plans as application materials. The Universal Hiring program will provide Federal funds not exceeding 75% of the total costs of the program or activity funded, unless a waiver is approved. For hiring, grants are made for up to 75% of the salary and benefit costs of each officer over three years, not to exceed \$75,000 per officer. The COPS Office also plans to fund additional COPS MORE applications.

BASE PROGRAM DESCRIPTION: COPS Innovative Programs. The general goal of COPS Innovative Programs is to design and implement programs that support innovative strategies and encourage policing agencies and communities to address public safety issues through partnerships using problem-solving strategies. Under the authorizing statute, up to 15 % of the funds available may be applied to other grants in support of the purposes of the Public Safety Partnership and Community Policing Grants program.

Goal: Provide support to agencies which either are fully engaged in or transitioning to community policing to:

- engage in focused problem-oriented policing and work in partnership with community members,
- undergo major changes in the organization in support of community policing,
- develop community policing training, and
- serve as community policing centers or demonstration sites.

In FY 1995, the COPS Office implemented this goal through several grantmaking strategies. Grants were made for a period of one year, with a possibility for renewal.

- **Comprehensive Communities Program (CCP).** The CCP seeks to encourage the development and implementation of comprehensive crime control and crime prevention strategies by communities faced with high rates of violent and drug-related crime. The two principles of the CCP are: 1) that communities must take a leadership role in developing partnerships to combat crime and violence, and 2) that state and local jurisdictions must establish truly coordinated and multi-disciplinary approaches to address crime- and violence-related problems, as well as the conditions which foster them. Strategies may be developed by communities and private agencies, and efforts made that would encourage citizens to take an active role in addressing crime-related problems.

Sixteen jurisdictions were awarded CCP grants by the Bureau of Justice Assistance (BJA). Award amounts range from \$1.5 million to \$2.2 million. Subsequently, the COPS Office entered into a Memorandum of Understanding with BJA to fund the community policing component in the following 10 CCP sites: Boston, MA; Wichita, KS; Seattle, WA; Fort Worth, TX; East Bay, CA; Columbia, SC; Washington, D.C.; Wilmington, DE; Phoenix, AZ; and Omaha, NE.

- **Youth Firearms Initiative** Under this grant program, the COPS Office funded ten jurisdictions to reduce the use of firearms among juveniles through community policing strategies. Enforcement, prevention, and suppression tactics are being implemented by these ten sites.
- **Community Policing Demonstration Projects** This program area includes support for continuation of a series of Community Policing Demonstration projects originally developed by BJA. Fifteen law enforcement agencies across the country were selected by BJA as demonstration sites based upon their progress in implementing community oriented policing in their jurisdictions. The COPS Office is supporting these projects starting with their second year of funding. The lessons learned from these sites in the implementation and further development of community-oriented policing will provide timely and useful information to policy makers and practitioners nationwide who are considering initiating or further refining community policing in their own jurisdictions.
- **Community Policing Initiatives Focused on Empowerment Zones** The COPS Office in partnership with the Office of Juvenile Justice and Delinquency Prevention and the Community Relations Service, are working together to develop and field-test a youth-oriented community policing demonstration within urban Empowerment Zones. The goal of the program is to assist these jurisdictions in choosing from a menu of effective police-youth program strategies for implementation. COPS technical assistance and training resources, coordinated with COPS grant monies, can be used to create a package designed to help jurisdictions assess delinquency prevention and control needs, and either select strategies that have worked in similarly-situated jurisdictions to meet similar needs or design innovative approaches to meet local needs.
- **Community Policing to Combat Domestic Violence** This program, announced in September 1995, focuses on training, problem-solving, and changing police organizations to reduce domestic violence across the country.

In FY 1996, limited funding was made available to support the following

- **COPS Anti-Gang Initiative** Building on the Youth Firearms Initiative, the COPS Office will fund fifteen jurisdictions to establish and expand innovative policing efforts directed against criminal gangs.
- **Problem Solving Partnerships** This grant program would provide support for agencies to address a specific local problem using systematic problem-solving techniques. Agencies would be asked to identify a specific problem and to develop a strategy for resolving that problem. Problem-solving projects focusing on domestic violence, gangs, drugs, youth/juveniles, violence, firearms reduction efforts, schools, and public housing will be encouraged. Support would be provided for equipment and resources used to address that specific problem. The program will also emphasize the development of partnerships with community organizations.

- **NIJ-COPS Technology Initiative** Working in collaboration with the National Institute of Justice (NIJ), the COPS Office plans to fund research and development efforts to support the application of cutting-edge communications and other technology to make officers on the beat more effective and efficient.
- **Community Policing to Combat Domestic Violence** Due to the overwhelming response to this solicitation, additional FY 1996 funds were allocated to award grants.
- **A pilot project in Baltimore, Maryland** was funded to test the efficacy of a nonemergency telephone number for police communications.

Under the terms of the Department of Justice Appropriations Act, 1997, except to the extent that limited carryover funding is utilized for innovative programs pursuant to reprogramming provisions, no funding may be directed toward innovative programs. A reprogramming has been requested to fund the pending Problem Solving Partnerships applications submitted in FY 1996 and to support solicitations for proposals under an Advancing Community Policing initiative. This initiative will attempt to provide law enforcement organizations with the resources to facilitate organizational change and promote improved leadership, change organizational culture and behavior, modify organizational structures, enhance research and planning, and re-engineering. In addition, this solicitation will establish community policing centers.

BASIC PROGRAM DESCRIPTION COPS Training, Technical Assistance, and Evaluation. The general goal of COPS Training, Technical Assistance, and Evaluation is to design, implement and support programs that reinforce partnerships and activities in deliver training and technical assistance that will permanently sustain community policing by integrating community partnerships and problem-solving into regional, State, local, and Indian tribal police and community groups and activities, and to perform and promote evaluations of various community policing strategies to determine their effectiveness. Under the authorizing statute, up to 1% of the funds available may be used for technical assistance and evaluation, and other studies. For FY 1998, a total of \$41,383,000 (3% of the total base, less the amount allocated for Management and Administration) is being funding would be available for COPS Training, Technical Assistance, and Evaluation.

FY 1995 Goal Identify the training and technical assistance needs of COPS grantees and begin to address these needs by providing grant specific training and technical assistance. Initiate systematic evaluation activities and other studies in support of the grant funded activities.

- As part of the application and grant process, the COPS Office collected information which is being used to determine the training and technical assistance needs in a systematic way. Based on this information, COPS staff are providing limited technical assistance and working with various organizations to devise training material for use by current COPS grantees. In addition, preliminary technical assistance written comments are being provided to specific COPS AHA grantees.
- In FY 1995, the COPS Office entered into a Cooperative Agreement with the Community Policing Consortium (CPC). The CPC was established and funded by the Bureau of Justice Assistance, and is a joint effort of the International Association of Chiefs of Police, the Police Foundation, the Police Executive Research Forum, the National Sheriffs' Association, and the National Organization of Black Law Enforcement Executives. Under the FY 1995 Cooperative Agreement, the CPC will provide a baseline level of information about community policing through the dissemination of newsletters,

monographs, and access to referral and electronic information to all COPS grantees. Opportunities to attend State and regional training, and site-specific technical assistance, will be offered to smaller subsets of the population of COPS grantees.

- The COPS Office, through an interagency agreement with the Executive Office for United States Attorneys, provided funding for 63 district-level training and technical assistance projects, designed and administered by the Law Enforcement Coordinating Committees in those districts.
- Through a total of \$14.8 million in interagency agreements with the National Institute of Justice, a comprehensive national evaluation of the implementation and impact of the COPS program was initiated, along with a series of focused and local evaluation, research initiatives focused on the successful implementation of community policing, and innovative research partnerships between police agencies and local academic institutions.
- Under this program area, COPS staff concentrated on the development of training curriculum and the delivery of training at all levels within law enforcement agencies. This included training for recruits, in-service patrol officers, supervisors, mid-level managers, command staff, and the community. National assessments of training will be undertaken to determine the nature and scope of training with regard to community policing. Eventually, grants or contracts may be made to State and local training academies, universities, and law enforcement agencies for the modification of curricula to focus on community policing and for the delivery of such training. Adapted training curricula should be developed for urban police, county sheriffs, rural police, special groups (transit police, campus police, public housing, and others), Indian reservations, and State police.
- In addition, a total of \$15 million in reimbursement has been provided from the U.S. Department of Defense to implement the Troops to COPS program. The Troops to COPS program, developed in partnership with the U.S. Department of Defense, provides up to \$5,000 per officer for community policing training for those COPS-funded officers who are honorably discharged veterans. This program is designed to be an incentive for COPS grantees to use their hiring grant funds to hire honorably discharged veterans. In addition, it promotes specialized community policing training. A total of 261 grants to current COPS grantees were made to support the training of 512 qualifying veterans.

EX.L996-98 Goal: Continue to provide quality training and technical assistance to enable COPS grantees to successfully transition to and sustain community policing. Perform research and evaluations of community policing strategies.

- The COPS Office, through its Training and Technical Assistance staff and through grants and cooperative agreements to service providers, will seek to provide all COPS grantees with timely and appropriate assistance to achieve a successful transition to agency-wide community policing, and to sustain and support the community policing approaches over the long-term following conclusion of Federal support. It is likely that needs assessments and other feedback will lead to year-by-year shifts of the emphasis of training and technical assistance activities. For instance, the preponderance of FY 1995 assistance focused on the basics of community policing for agencies that had no previous exposure to the subject. In FY 1996-98, the emphasis will shift to more "advanced" subjects, such as managing organizational change and strategic planning. The COPS Office also will continue to focus on supporting the organizations and agencies located throughout the country that will provide this type of support over the long-term.
- Targeted training and technical assistance grants and cooperative agreements will continue to be implemented during FY 1997. These projects will focus on adaptation of training curricula, technological innovation in training delivery, and community partnership-building.

- Perform evaluations of community policing strategies. The COPS Office will conduct descriptive assessments of tactics, strategies, and structures that form the elements of community policing. These evaluations will use the following types of data:

- crimes reported to police, including violent offenses;
- information on victims of crime; and
- citizen surveys to determine the effects of community policing on perceptions of fear, improvements in the quality of life, and satisfaction with police services.

A wide variety of program elements will also be evaluated, such as various crime prevention efforts, anti-violence programs, public education strategies, and community development efforts--particularly as they related to community policing. Certain field tactics like foot and bike patrols and coordinated civil criminal enforcement need to be assessed.

- Promote evaluations of and research into community policing strategies. The National Institute of Justice will continue to oversee an independent national assessment of the COPS program, concentrating especially on the impact of the 85% of funds designated for putting more officers on the street. It will attempt to assess the total effect that the COPS program has had on the structure and delivery of police services across the nation.

NIJ also will sponsor a wide array of research activities to inform policymaking by the COPS Office, and to make available widely information about state-of-the-art approaches and strategies for community policing.

	(\$7,582)

Public Safety and Community Policing Grants

A program decrease of \$7,582,000 is requested for Public Safety and Community Policing Grants in FY 1998. The funding level for Public Safety and Community Policing Grants would total \$1,371,865,000 in FY 1998. The amount requested for Public Safety and Community Policing Grants (\$1,371,865,000), and for Management and Administration (\$28,135,000), would provide a total funding level of \$1,400,000,000. The total requested for Public Safety and Community Policing Grants in FY 1998, \$1,371,865,000 includes up to \$1,330,709,000 for COPS Hiring Grants, and \$41,156,000 for Training, Technical Assistance, and Evaluation.

BASE PROGRAM DESCRIPTION: The Police Corps program will increase the number of police with advanced education and training, and provide educational assistance to students who possess a sincere interest in public service in the form of law enforcement. The program, which requires a four year service obligation by scholarship recipients, is expected to provide the necessary incentives to attract and retain young men and women to a career in law enforcement. A total of \$20,000,000, the funding level authorized in the VCCA, is requested for the Police Corps program for FY 1998.

EY 1996-98 Goals:

- In FY 1996, pursuant to statute, establish the Office of the Police Corps and Law Enforcement Education
- Establish requirements for State plans for Police Corps participants; regulations to govern the competitive selection of participants; and programs of training for Police Corps participants
- Select participating states and award scholarships to qualifying participants

Law Enforcement Scholarship Program

Proposed Actions

As stated in the legislation, the COPS Office will initiate the Law Enforcement Scholarship program to allow individuals to receive scholarship grants while employed as police officers. This program, like the previously successful Law Enforcement Education Program, would allow police to increase their educational opportunities, and is critical to enhancing State and local law enforcement recruitment, retention, and education.

Goal

- The Office of the Police Corps and Law Enforcement Education, in consultation with the Assistant Secretary for Postsecondary Education, will issue rules to implement the State allotment procedures, establish application requirements, and disburse funds to participating States.

A total of \$20,000,000, the funding level authorized in the VCCA, is requested for the Law Enforcement Scholarship Program for FY 1998. These resources would be used to award scholarship grants to individuals who are employed as police officers. This funding level is necessary to enhance State and local law enforcement recruitment, retention, and education.

INITIATIVE

	Perm. FTEs	FTE	Amount
Police Recruitment Grants	\$5,000

PROPOSED ACTIONS

The Police Recruitment Grants program is designed to recruit and retain applicants to police departments. The program provides recruiting services, which include tutorial programs to enable individuals to meet police force academic requirements and to pass entrance examinations, counseling for police applicants who may encounter problems throughout the application process, and retention services to assist individuals to stay in the application process of a police department.

Goal

- The Office will establish application requirements, promulgate regulations setting forth grant criteria, and award grants to qualified community organizations to assist in meeting the costs of qualified programs which are designed to recruit and retain applicants to police departments.

A total of \$5,000,000, the funding level authorized in the VCCA, is requested for the Police Recruitment Grants program for FY 1998. These resources would be used to fully implement the program, and to provide recruiting, counseling, and retention services to police applicants. These services would assist applicants to meet police force academic requirements, pass entrance examinations, and stay in the application process of a police department.

Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles

Proposed Actions

The Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program is designed to provide grants directly to prosecutorial offices for at least 1,000 new initiatives to target gangs, gang violence, and other violent juvenile crime. When necessary for the implementation of this program, funds may be used to hire gang prosecutors, buy technology and equipment, and state of the art training.

Goal

- To facilitate the cooperation and coordination of prosecutors and police with school officials, probation officers, youth and social service professionals, and community members in the effort to reduce the incidence of gang activity and violent juvenile crime, increase proactive identification of high-risk youth, and speed the prosecution of violent juvenile offenders. The prosecutorial offices, through these partnerships, will identify high-risk juveniles and law enforcement services, resources and referrals, and alternative activities in the interest of reducing gang-related and violent juvenile crime.

A total of \$100,000,000 is requested for the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program for FY 1998. Of this total, \$95,000,000 would fund this grant program, and 20 positions, 10 work years, and \$5,000,000 would provide Management and Administration support. These resources would be used to fully implement the program, and help prosecutorial offices target gangs, gang violence, and other violent juvenile crime.

Increase/Decrease	143	100	12,582

BASIC PROGRAM DESCRIPTION: The Management and Administration (M&A) activity is responsible for providing management oversight and administrative support to the COPS Office, and ensuring that the goals of the Public Safety and Community Policing Grants program, Police Corps program, Law Enforcement Scholarship Program, Police Recruitment Grants program, and the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program are achieved. For FY 1998, a total of 186 positions, 186 workyears, and \$20,553,000 in base funding is available. This total includes 32 positions and 32 workyears under COPS' ceiling that are detailed to the Office of Justice Programs (OJP), Office of the Comptroller (OC), to support grant accounting services performed by OJP/OC for COPS grantees. In addition, an estimated \$2.5 million in base funding is available to provide OJP/OC, through interagency agreement, to support the 23 positions and 23 workyears under OJP/OC's ceiling that are devoted to providing grant accounting services to COPS grantees.

INITIATIVE

	Perm. Pos.	FTE	Amount
Management and Administration	143	100	\$12,582

COPS is requesting a program increase of 143 positions, 100 workyears, and \$12,582,000 for FY 1998. The increase includes 67 positions and 34 workyears to support grants administration and related administrative services, and training and technical assistance services provided to grantees, 56 positions and 56 workyears under COPS' ceiling to support grant accounting services performed by OJP/OC for COPS grantees, and 20 positions, 10 workyears, and \$5,000,000 for the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program.

In FY 1998, COPS is requesting a total of 329 positions, 286 workyears, and \$33,135,000 for management and administration. This total includes 221 positions and 188 workyears to support COPS programs, 88 positions and 88 workyears under COPS' ceiling to support grant accounting services performed by OJP/OC for COPS grantees, and 20 positions and 10 workyears to support the Prosecutorial Initiatives Targeting Gang Crime and Violent Juveniles program.

During FY 1996, the COPS Office and OJP worked collaboratively to address the timeliness of the grantmaking process, the status of monitoring activity, and to estimate FY 1997 staffing requirements to support the grant administration and accounting functions performed by each office. The COPS Office and OJP briefed the Attorney General, the Associate Attorney General, and the Justice Management Division on the results of this analysis, and the staffing levels needed to support both the COPS and OJP grantmaking process. For the FY 1998 request, OJP submitted their staffing requirements to COPS to be incorporated in the FY 1998 budget submission. The number of positions and workyears requested in FY 1998 is a result of extensive analyses of workload data on the discrete grant processing, award, payment and monitoring functions performed by COPS and OJP/OC, each with respect to their own operations.

Beginning in FY 1998, COPS and OJP/OC will be responsible for the administration, payment, and monitoring of over \$4 billion in prior year grant activity (closeout grant activities for \$1.3 billion in FY 1995, and grant monitoring activities for \$1.4 billion in FY 1996, and \$1.42 billion in FY 1997). This level of funding in discretionary grant programs requires a significant level of staffing to administer. One of the most critical aspects of the grant process is the monitoring function. Grant monitoring is critical to ensuring that the resources provided are spent as authorized and as reported by the grantee. Monitoring typically involves the labor intensive tasks of developing monitoring plans, conducting on-site reviews or visits to the grantees, maintaining grant files, preparing quarterly financial reports, coordinating non-compliance issues with appropriate officials, and serving as liaison for the evaluation aspects of the program.

By the end of FY 1996, an estimated total of 9,300 agencies were funded. The total number of agencies funded is expected to reach 11,800 by the end of FY 1997. Therefore, a meaningful monitoring program will require significant on-site reviews of the larger agencies with large amounts of funding. There will also be a need to conduct a sampling of smaller sites to ensure that the jurisdictions that are new to the Federal grant process are following established protocol. Because there are so many smaller jurisdictions, monitoring even a representative sample is resource intensive.

Beginning in FY 1997, the COPS Office and OJP will launch an aggressive monitoring program to begin reviewing grants made over the last 18 months. This monitoring program will be implemented during the first and second quarters of FY 1996. The COPS Office anticipates that the monitoring program will be operational by the third quarter of FY 1997. The additional workyears authorized in FY 1997 will be devoted primarily to implementing the monitoring program in FY 1997. The additional workyears requested in FY 1998 will be necessary to provide sufficient staffing levels to ensure that the monitoring program stays on track, as well as to perform ongoing grant processing, awarding, and payment activities.

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Work- Per year	Amount
Increases (Automatic, non-policy):		
1. 1996 pay raise		\$208
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1996 and is consistent with Administration policy included in the 1996 President's budget request. This increase includes locally pay adjustments as well as the general pay raise. The amount requested, \$208,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$160,000 for pay and \$48,000 for benefits = \$208,000).		
2. Annualization of 1997 pay raise		50
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locally pay adjustments as well as the general pay raise. The amount requested, \$50,000, represents the pay amounts for three quarters of the year (\$39,000 for compensation and \$11,000 for benefits).		
3. Within-grade increases		8
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder sales to reflect promotion policy for each organization. The request includes \$5,000 for pay and \$3,000 for benefits.		
4. Annualization of 12 additional positions approved in 1997	12	431
This provides for the annualization of 12 additional positions provided in 1997 Congressional Action for Management and Administration. This request includes nonrecurring costs for one-time items associated with the increased positions.		
5. General pricing level adjustments		56
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

**Counterterrorism Fund
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

For 1998, the Department seeks \$29,450,000 in no-year funding for the Attorney General's Counterterrorism Fund. The Counterterrorism Fund was established with \$14,200,000 in no-year funding by the 1995 Emergency Supplemental Act. The appropriation enacted for Fiscal Year 1997 included an additional \$15,250,000 in no-year funding for the Counterterrorism Fund.

The 1997 Department of Justice Appropriations Act authorizes the Fund's use for reimbursing Departmental components for costs incurred in support of countering, investigating, or prosecuting domestic and/or international terrorism, and to finance reward payments in connection with such activities. The Fund is further authorized for use in restoring the operational capacities of offices destroyed or damaged in domestic or international terrorism events. The funds requested for 1998 would be authorized for the same purposes.

The recent gains and world attention achieved by terrorist groups could prompt future terrorist events. In addition, because terrorism is often politically motivated, the rapid pace of current world politics could be another catalyst for terrorist attempts in 1998 and beyond. These are just two of several factors that could elevate terrorism response demands well above current estimates.

The personal loss and injury sustained in terrorist episodes like the Atlanta Centennial Park bombing, the Antrak derailment in Arizona, the Oklahoma City bombing, and the World Trade Center bombing warrant a heightened, more timely response to terrorism. Although Departmental components have some funding and personnel resources, the Department must ensure that it has the resources to respond to terrorism in a manner that will ensure the flexibility to ensure that unanticipated terrorist episodes are addressed in the most rapid and effective manner possible. Although it is impossible to predict the timing, frequency, and severity of terrorist threats/acts, the resource level requested will provide the Counterterrorism Fund with critical depth and flexibility to respond to future terrorist threats/acts.

Counterterrorism Fund
Salaries and Expenses
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For necessary expenses, as determined by the Attorney General, [\$9,450,000]* _____ \$29,450,000

to remain available until expended, to reimburse any Department of Justice organization for (1) the costs incurred in reestablishing the operational capability of an office or facility which has been damaged or destroyed as a result of [the bombing of the Alfred P. Murrah Federal Building in Oklahoma City or] any domestic or international terrorist incident, (2) the costs of providing support to counter, investigate or prosecute domestic or international terrorism, including payment of rewards in connection with these activities, and (3) the cost of conducting a terrorism threat assessment of Federal agencies and their facilities: Provided, That funds provided under this section shall be available only after the Attorney General notifies the Committees on Appropriations of the House of Representatives and the Senate in accordance with Section 605 of this Act.

[For an additional amount for necessary expenses, as determined by the Attorney General, \$20,000,000, to remain available until expended, to reimburse any Department of Justice organization for (1) the costs incurred in reestablishing the operational capability of an office or facility which has been damaged or destroyed as a result of any domestic or international terrorist incident, or (2) the costs of providing support to counter, investigate or prosecute domestic or international terrorism, including payment of rewards in connection with these activities: Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.] (Department of Justice Appropriation Act, 1997.)

Explanation of Changes:

1. The first change deletes specific reference to the Alfred P. Murrah Federal Building. Although not specifically cited in the proposed new language, any additional funds that may be necessary to reestablish the operational capability of the Murrah Building would still be available under the proposed new language.
2. The second change deletes FY 1997 emergency appropriation language.

	Perm. Pos.	FTE	Amount
Counterterrorism Fund			
1997 As Enacted	\$29,430
1998 Base	29,430
1998 Estimate	29,430
Increase/Decrease	0

BASE PROGRAM DESCRIPTION: The Counterterrorism Fund was established with \$34,200,000 in no-year funding by the 1995 Emergency Supplemental Act. The appropriation enacted for 1997 includes an additional \$29,450,000 in no-year funding for the Counterterrorism Fund. It is expected that already identified events, such as the Presidential inauguration and the Oklahoma City Bombing Trial, may consume a significant amount of the 1997 Counterterrorism Fund available balance. Other initiatives that may require funds from this account in 1997 include TWA Flight 800, the Atlanta Centennial Park Bombing, and the Unibomber.

The personal loss and injury sustained in terrorist episodes like the Atlanta Centennial Park bombing, the Amtrak derailment in Arizona, the Oklahoma City bombing, and the World Trade Center bombing warrant a heightened, more timely response to terrorism. Although Departmental components have base funding and enhancements requested for 1998 to help address this concern, these resources have neither the depth nor the flexibility to ensure that anticipated terrorist plots are addressed in the most rapid and effective manner possible. The Counterterrorism Fund is capable of having this necessary depth and flexibility.

Although many aspects of crime are difficult to anticipate and plan for, the widespread devastation resulting from terrorism compels that law enforcement be prepared to the highest possible level. Provision of the requested resources of \$29,450,000 will assist in the effort where future counterterrorism efforts meet public safety needs. In previous years, Counterterrorism Fund resources have been used for such things as:

- Costs related to the Oklahoma City bombing and trial preparation
- 1996 Summer Olympics in Atlanta
- 1996 Political Conventions
- Combatting Middle Eastern terrorism.

PROGRAM CHANGES: None.

INTRODUCTION

The Office of the Inspector General (OIG) was statutorily established in the Department of Justice (DOJ) on April 14, 1989. The OIG investigates alleged violations of criminal and civil laws, regulations, and ethical standards arising from the conduct of the Department's employees. The OIG provides leadership and assists management in promoting integrity, economy, efficiency, and effectiveness within the Department and in its financial, contractual, and grant relationships with others. Also by statute, the OIG reports to the Attorney General, Congress, and the public on a semiannual basis regarding its significant activities.

DOJ's responsibilities are wide-ranging. They include detecting, apprehending, prosecuting, and incarcerating criminal offenders; upholding the civil rights of all Americans; enforcing laws to protect the environment; ensuring healthy competition of business; safeguarding the consumer from fraudulent activity; carrying out the immigration laws of the United States; and representing the American people in all legal matters involving the United States Government. DOJ carries out its workload throughout the United States (in approximately 2,000 installations) and in nearly 100 overseas offices.

The OIG promotes efficient and effective management within DOJ and detects and deters wrongdoing in its programs and operations using the coordinated efforts of its investigative, audit, and inspection resources. Specifically, the OIG: (1) investigates violations of law and DOJ regulations for appropriate criminal prosecution, civil litigation, and administrative action for a department with more than 105,000 employees; (2) conducts reports on and follows up on financial and performance audits of DOJ programs, contracts, grants and agreements, which is expected to total \$18.6 billion in 1997; and (3) performs short-term inspections of DOJ programs that provide early warning to the Administration and Congress regarding potential or existing problems. These activities are crucial to DOJ's obligation to prudently manage its appropriations and to improve the efficiency of its activities.

CURRENT BUDGET AUTHORITY

The OIG currently operates with a total direct budget authority of \$31,985,060 comprised of an enacted appropriation of \$31,960,000 and 326 full-time permanent positions, and 388 workyears, and High Intensity Drug Trafficking Area (HIDTA) funding of \$25,060. In addition to direct appropriations, the OIG expects to receive \$6,250,000 to fund 65 workyears supported through reimbursable agreements with the INS and the United States Trustee. The OIG also receives additional reimbursements for the conduct of financial statement audits (IFSA) as required by the Chief Financial Officers (CFO) Act of 1990 and the Government Management Reform (GMR) Act of 1993. The majority of funding for CFO audits is considered "pass through" as the actual audits are performed by private Certified Public Accounting (CPA) firms and are funded from the DOJ's Working Capital Fund (WCF) and Assets Forfeiture Fund. OIG auditors oversee the CPA's work and follow up on corrective actions. During FY 1997, we anticipate receiving approximately \$6,740,000 for financial statement audit activities, including \$5,600,000 as "pass through" and \$1,140,000 and 11 FTE for oversight.

SUMMARY OF THE 1998 BUDGET REQUEST

The OIG's request for FY 1998 totals \$33,211,000, 326 permanent positions and 416 workyears, representing no change in positions, an increase of 28 workyears and a net increase of \$1,251,000 over the FY 1997 appropriated level. The principal element for the change is

- ♦ \$1,251,000 for mandatory increases, related to continuing FY 1997 current services, including FY 1998 pay raises.

This increase is offset by the following decrease

- ♦ -\$25,060 for non recurring HIDTA funding

We project reimbursements in 1998 of \$6,980,000 and 14 FTE related to our FSA work, including \$5,650,000 in "pass through" contract costs and \$1,330,000 and 14 FTE in oversight costs, \$5,000,000 and 50 FTE from INS Fee account oversight work, and \$1,250,000 and 15 FTE from the U.S. Trustees for requested audit work. Additionally, we anticipate the Attorney General transferring one-tenth of one percent from DOJ's VCRTF funding for oversight work of crime bill funding. We estimate this amount will support 25 FTE in FY 1998 and 40 FTE in FY 1999. As this transfer does not affect our base, we are treating the FTE as "reimbursable" for presentation purposes. Extensive justification for this transfer request appears later in this submission.

U.S. DEPARTMENT OF JUSTICE
OFFICE OF THE INSPECTOR GENERAL
WASHINGTON, D.C. 20535

Office of the Inspector General
Salaries and Expenses
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Office of The Inspector General

For necessary expenses of the Office of the Inspector General, [\$31,960,000], including not to exceed \$33,211,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of the Attorney General and for the acquisition, lease, maintenance, and operation of motor vehicles, without regard to the general purchase price limitation for the current fiscal year. Provided, that up to one-tenth of one percent of the Department of Justice's allocation from the Violent Crime Reduction Trust Fund grant programs may be transferred at the discretion of the Attorney General to this account for the audit or other services of such grant programs, as authorized by section 130005 of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322) (Department of Justice and Related Agencies Appropriations Act, 1997).

Explanation of Changes

The Department proposes that a small percentage of Violent Crime Reduction Trust Fund (VCRTF) program dollars be transferred to the OIG so that it can identify problems and help assure the Attorney General and the Congress that corrective action is taken to protect the integrity, efficiency and soundness of VCRTF programs.

Congressional Appropriation Actions. Congressional action approved \$15 M in mandatory increases and restoration of approximately one-half of FY 1996 cuts. Congressional action did not appropriate direct funding for FSA work, but it did direct that the OIG be reimbursed from DOJ's WCF retained earnings for its FSA efforts. Congressional action did not appropriate direct funding for INS fee related oversight work, but it did allow for the OIG to be reimbursed for up to \$5.0 M from INS fees for this effort.

LEGISLATIVE COMMITTEE

*** Does not include an amount to be transferred since the amount is dependent on total DOJ Violent Crime Reduction Trust funding and the discretion of the Attorney General. Therefore, the transfer will not affect the OIG base. We anticipate funding will support 25.40 FTE, and are showing 25 "reimbursable" FTE for presentation purposes only.

INS Fee Accounts - The OIG has significantly increased its consultation with INS during the development of its workplan to assure that INS receives tangible management assistance from the agreement, which supports audits, investigations, and inspections performed on the programs funded by INS fee accounts. Under present conditions, the OIG is limited to using these resources only for INS Fee Account programs.

Violent Crime Reduction Trust Fund - Audit or other services for oversight of the anticipated greater than \$17 B VCRTF programs.

U.S. Trustees - Audit services related to panel trustees to identify potential problem areas/weaknesses, examine annual financial reports on Chapters 12 & 13 Standing Trustees, and perform reviews of Chapter 7 panel trustees.

Financial Statement Audits - In accordance with the CFO and GMRA Acts, the OIG oversees the financial statement audits for all audited accounts within DOJ.

EXECUTIVE SUMMARY

MISSION

The OIG promotes efficient and effective management within DOJ and detects and deters wrongdoing in its programs and operations using the coordinated efforts of its investigative, audit, and inspection resources.

ORGANIZATIONAL GOALS

To fulfill its mission, the OIG has established three major goals:

1. Promote the efficiency and effectiveness of DOJ programs and operations
2. Detect and deter misconduct in programs and operations within or financed by DOJ
3. Build relationships with customers based on a shared commitment to improving program operations and effectiveness

MAJOR OBJECTIVES

The OIG reaches its goals by realizing the following objectives:

- ◆ Ensure that resources are used effectively to achieve qualitatively superior results in criminal and administrative investigations, as well as to ensure a continued focus on broad/high impact investigations.
- ◆ Conduct, report on, and follow up on performance audits and inspections of programs and operations within or financed by DOJ.
- ◆ Provide technical assistance and management advisory services to DOJ management to assist in improving program operations.
- ◆ Coordinate and cooperate with federal, state, and local government agencies, and non government entities, to promote efficiency and effectiveness and prevent and detect fraud, waste, and abuse in programs and operations within, or financed by, DOJ.

BASE PROGRAM DESCRIPTION

The OIG achieves its major objectives by carrying out specific functions assigned to several divisions. The OIG's programs are implemented by its Investigations, Audit, and Inspections Divisions and the Special Investigations and Review Unit (SIRU). Supporting these components is an Executive Direction and Control function that establishes and issues policy and program direction for the OIG through the immediate office of the Inspector General, General Counsel, and the Management and Planning Division. Specific responsibilities of the Executive Direction and Control function include policy development, legal counsel, legislative matters, planning, budget, finance, quality assurance and evaluation, personnel training, procurement, automated data processing, and general support services.

Specific functions performed in the OIG's base program include

- ◆ Investigate allegations against DOJ employees regarding violations of the laws and regulations pertaining to DOJ and refer, as appropriate, for criminal prosecution, civil litigation, and administrative action.
- ◆ Track and report on the status of all DOJ civil rights investigations involving INS personnel.
- ◆ Conduct an aggressive integrity information program to reduce employee misconduct and provide expanded fraud vulnerability briefings to more contracting personnel.
- ◆ Conduct report, and follow-up on financial audits of DOJ organizations, programs, contracts, grants and other agreements.
- ◆ Perform audits and inspections of high risk and material weakness areas identified by DOJ and OMB, and maintain flexibility needed to support DOJ's program priorities.
- ◆ Monitor DOJ's Information Resource Management (IRM) processes and capabilities through the Computer Security and Information Technology Audit Office.
- ◆ Conduct or oversee the performance of audits of DOJ financial statements in accordance with the CFO and Government Management Reform Acts.
- ◆ Examine DOJ components to ensure effective debt collection activities as well as identification and collection of user fees.
- ◆ Perform inspections and program-impact evaluations of DOJ programs and activities, and
- ◆ Evaluate existing and proposed legislation and regulations affecting the prevention and detection of fraud, waste, and abuse in DOJ programs and operations.

PROGRAM PERFORMANCE INFORMATION

ACCOMPLISHMENTS Following are significant OIG accomplishments during FY 1994, and highlights of significant current efforts

Investigations

- ◆ OIG Special Agents made 136 arrests and conducted investigations that resulted in the return of 121 affidavits and 129 convictions
- ◆ As a direct result of OIG investigations, DOJ received \$875,433 in the form of fines, restitution, and recoveries, seized \$1,559,124 and deposited \$22,867 in bribe money in the U.S. Treasury
- ◆ The OIG received and processed 6,233 complaints
- ◆ Agents closed 412 investigations and had 444 pending at the end of the fiscal year, referred 424 allegations to other justice components for appropriate action and are monitoring 721 referrals
- ◆ The Investigations Division provided 104 Integrity Awareness sessions to 2,912 justice employees
- ◆ An undercover investigation conducted by the OIG New York Field Office disclosed that over a 4 year period, five INS clerks illegally issued thousands of employment authorization cards and other benefits to illegal aliens. The clerks, all from one INS district office, conspired with document vendors who paid them bribes ranging from \$300 to \$1,000 per card. The clerks also provided the document vendors with sensitive computer printouts. The five INS employees and a document vendor were arrested on charges of bribery and conspiracy. When arrested, over \$164,000 in cash was seized from the document vendor. Serious internal control deficiencies were also identified by the OIG for corrective actions.
- ◆ The OIG initiated an investigation of three related drug trafficking organizations interested in identifying a corrupt U.S. immigration official to provide them with immigration documents and to facilitate the entry of hundreds of loads of cocaine into the United States. The OIG informed DEA and as a result Operations MOTORCROSS and BROKEN BORDER were initiated as Organized Crime Drug Enforcement Task Force cases in the Central and Southern Districts of California. An OIG agent posed as a corrupt supervisory immigration inspector and was paid \$12,400 in bribes for the issuance of four INS documents. Concurrently, DEA allowed controlled deliveries of cocaine to the drug traffickers, the drugs were later seized. Four drug traffickers who paid bribes to the undercover OIG agent were arrested by the OIG San Diego Field Office on charges of bribery of a public official. In addition, DEA arrested six other drug traffickers and seized \$3.7 million.

Audit

- ◆ Completed and issued 16 internal reports
- ◆ Oversaw and issued 7 Chief Financial Officers audit reports

- ◆ Completed and issued 35 contract, grant, and equitable sharing audit reports, and COPS preaward reviews.
- ◆ Performed and issued 207 bankruptcy audit reports
- ◆ Reviewed and issued 209 Single Audit Act audit reports covering 948 contracts and grants
- ◆ Issued 27 management information, technical assistance, investigative assistance memoranda, and notifications of irregularity. In addition, Audit made recommendations for
 - ◆ Funds Put to Better Use - \$18,564,369.
 - ◆ Questioned Costs - \$15,313,090.
 - ◆ Enhanced Revenues - \$290,160.
 - ◆ Management Improvements - 373.

Additionally,

- ◆ Audit issued two Status Reports on the INS Financial Management Corrective Action Plan. In the first report, issued in January 1996, Audit concluded INS had begun to make progress as of September 1995, towards implementing the corrective action plan. However, in the second report issued in September 1996, it was noted that INS had made very limited progress as of June 30, 1996 towards implementing the corrective action plan in a timely manner. Audit also expressed concern in the latter report about INS' ability to implement a new core financial system by October 1, 1997 and addressed the 25 actions that were behind schedule.
- ◆ An audit of the INS Border Patrol Management of Aviation Operations was completed during the reporting period. This audit was the fourth on DOJ component aviation operations and was part of the President's Council on Integrity and Efficiency's assessment of civilian aircraft in the Executive Branch. Additionally, the Audit Division provided comments to the GSA OIG, the lead agency, on the governmentwide draft report of Executive Branch Use of Aircraft.
- ◆ Audit increased its efforts in monitoring INS' major initiatives project which is to enhance their ADP operations. The total cost for these initiatives is projected to be almost \$1.7 billion and will affect nearly all aspects of INS management. Members of the Audit Division participated in quarterly briefings presented by INS management covering the automation initiatives in general as well as the quarterly briefings that cover the activities of the INS information technology partner contractor. Audit also assessed the automation initiatives associated with each operation or activity in our regular audits of INS operations and activities.

10/10/1996
10/10/1996
10/10/1996

- ◆ The USMS establishes agreements with local jails to acquire space for federal prisoners. For FY 1996, the USMS anticipated having almost 1,000 agreements nationwide at a cost of \$255 million. At the request of the USMS, Audit audited six agreements with local jails. These audits have resulted in questioned costs of \$9.8 million and over \$1.3 million in funds that could be better utilized. Audit also worked with USMS staff regarding these audits and the Intergovernmental Agreement program in general. The USMS is aggressively pursuing corrective actions and the recovery of unallowable costs.
- ◆ The Audit Division recently finished an audit of the BOP's Community Corrections Center (CCC) Program. Audit found CCCs to be a cost effective, safe alternative to incarceration. BOP effectively negotiated, awarded, and monitored the CCC contracts. However, CCC operations can be improved by requiring the Administrative Office of the U.S. Courts (AOUSC) to reimburse the BOP its \$14 million annual cost of supervising AOUSC referred cases.
- ◆ The Audit Division prepared for the upcoming Departmentwide Financial Statement audit by identifying reporting entities and contacting the financial managers of each bureau to explain the audit process and our expectations. Audit also provided a liaison function between Bureau financial managers and GAO auditors who were in the Department to start preliminary work for their FY 1997 governmentwide audit. As the Departmentwide Financial Statement audit is to be conducted by independent public accountants, contracting efforts continued throughout most of the year including preparing answers to offerors' questions. Technical Selection Panel review of proposals and best and final offers, and statements of work prepared for each of the reporting entities. Four contracts were awarded in mid-September 1996 and seven delivery orders were awarded by the end of the fiscal year. Assistance was also provided to JMD in preparing the reprogramming amounts necessary to pay for the audits.
- ◆ Audit continued its efforts in working with COPS officials to aid in their implementation of the Violent Crime Control and Law Enforcement Act of 1994. Audit completed five preaward reviews of selected grant applicants under the COPS FAST and COPS MORE programs. The objective of COPS is to fund the hiring of 100,000 additional police officers nationwide. Funding for the program for fiscal years 1995 and 1996 was approximately \$2.5 billion.
- ◆ The Department shares the proceeds of forfeited assets with state and local law enforcement agencies that participate in federal investigations resulting in forfeitures. These funds are to be used for law enforcement purposes. At the request of Department management, the Audit Division completed four audits of equitable sharing revenues questioning almost \$1.8 million. These audits were performed at the request of the Criminal Division.
- ◆ The Audit Division revised the general audit guide for the use of equitable sharing of cash and property with state and local law enforcement agencies. The guide will be used for all future equitable sharing audits and, in particular, for an internal audit of state and local use of equitable sharing funds.
- ◆ Of the overall audit numbers cited above, the Audit Division completed 17 audits of expenditures made under Departmental contracts and grants and reported over \$3.8 million in questioned costs.

Inspections

The Inspections Division issued 12 inspection reports and conducted or participated in several special inquiries. Inspectors work closely with Department managers to identify, develop, and implement innovative solutions to address problems identified in reports. Highlights of Inspections work include

CONFIDENTIAL
 OFFICE OF THE ATTORNEY GENERAL
 U.S. DEPARTMENT OF JUSTICE

- ◆ A review of the INS' deportation program. The report noted that INS' program to deport nondetained aliens was largely ineffective, only about 11 percent of nondetained aliens with final orders to deport left during FY 1994. In contrast, about 94 percent of the detained aliens were removed within an average of 16 days after issuance of the final orders.
- ◆ A review of the Department's policy and guidance issued on the American Express charge card program and the extent of use. Report findings showed Department employees are not using the American Express charge card to the maximum extent possible and, therefore, the Department does not benefit from as large a refund as it could from American Express through its rebate program. The report noted a small percentage of charge card misuse and found insufficient monitoring procedures to detect it.
- ◆ A review identifying serious defects in the way the INS deals with illegal aliens who are the beneficiaries of document fraud. Review findings indicated that INS investigators usually did not attempt to locate aliens identified as participants in fraud schemes due to higher investigative priorities such as criminal aliens and employer sanctions, deportation proceedings against these aliens, were not initiated, and INS did not delete, correct, or flag entries to its Central Index System to reflect aliens known to have fraudulently obtained documents to alien INS officers should they encounter these same aliens in the future.
- ◆ A review addressing INS' efforts to combat sweatshops that exploit illegal aliens, often in nearly slave like conditions, showed that INS faces significant obstacles to effective enforcement of immigration law in sweatshops, and a large illegal immigrant workforce is likely to continue to be available to sweatshop operators for the foreseeable future. One of our primary findings was that INS has limited intelligence collection capabilities, both domestic or foreign, on sweatshop operations and their links to alien smuggling organizations. We also identified interagency coordination problems that would impede INS' efforts. OIG staff joined the Deputy Attorney General's Interagency Working Group on Sweatshop Strategy Coordination to develop innovative solutions to address the battle against sweatshops.
- ◆ A review on safeguarding grand jury material at U.S. Attorneys' Offices. Report findings showed that 60 percent of the U.S. Attorneys Offices (USAO) used court reporting firms that employed court reporter personnel who have access to grand jury material, but did not have adequate security clearances. We also noted several inadequacies related to the physical security of grand jury material by both USAOs and court reporting firms.
- ◆ In response to the Attorney General's request that the OIG become involved in the Violent Offender Incarceration and Truth in Sentencing Incentive Grant programs, inspections began a series of meetings with the Office of Justice Programs (OJP) who has responsibility for implementing these grant programs. To date, inspections met with OJP program staff, provided comments on program guidance and the grant application kit, and agreed to provide pre- and post-award grant reviews. We also plan to devote resources in FY 1997 to a variety of smaller grant programs.

Special Investigations

- ◆ The OIG released its report on the event known as "Good Ol' Boy Roundup" (Roundup). The OIG conducted a wide ranging investigation (interviewing over 500 witnesses) to determine whether any DOJ employees had attended the Roundup and, if so, whether they engaged in or approved of racial, criminal, or other kinds of misconduct. The OIG concluded that the Roundup was not, as it was portrayed in the media stories, a "Klan rally," an intentionally "whites only" racist gathering, or a haven for criminal conduct. Although we concluded that much of the early Roundup news was overblown and distorted,

WASH. POST, 1996

our investigation revealed ample evidence of shocking racist, xenophobic and puerile behavior by attendees occurring in various years. The OIG recommended that DOJ provide further guidance and training about what constitutes conduct that brings DOJ or one of its agencies into disrepute.

- ◆ An investigation of allegations that the INS misled a Congressional Task Force visiting INS facilities in Miami concerning conditions in the facilities. The OIG report, *Alleged Deception of Congress*, The Congressional Task Force on Immigration Reform's Fact finding Visit to the Miami District of INS in June 1995 was issued in June 1996. In conducting this investigation, the OIG interviewed more than 450 witnesses, obtained in excess of 200 affidavits, recovered and analyzed thousands of electronic mail messages, reviewed thousands of pages of documents, and reconstructed data for alien movements and staffing issues for many months prior to the Delegation's visit. The OIG concluded that INS management in Miami intentionally misled the Congressional Task Force.
- ◆ At the request of the Senate Select Committee on Intelligence (SSCI), the Inspectors General of the Departments of Justice, State, Defense, and the Central Intelligence Agency (CIA) conducted a government wide review of the response of the United States Government to the murders of four Marines in 1985 in the Zona Rosa district of El Salvador. Allegations recently surfaced that two Salvadorans believed to be connected to the murders were allowed to enter and live in the United States. We conducted a lengthy review of the actions taken by the Department of Justice in response to the murders. In September 1996 we submitted our report to SSCI and in coordination with the other three Inspectors General, briefed the Committee concerning our findings.

- ◆ The OIG has conducted several investigations of high level DOJ officials for alleged misconduct, including a U.S. Attorney who resigned after the IG wrote a report on his alleged misconduct inside an adult nightclub.

The OIG continues its work on the following special investigations:

- A review of the Federal Bureau of Investigation's (FBI) investigation of the loss of its intelligence assets in 1985-86 and its role in subsequent efforts to uncover the compromises in FBI and CIA cases of that period that were caused by Aldrich Ames.
- An investigation into allegations that scientific examinations within the FBI laboratory on some of its most significant cases were conducted improperly and the results skewed in favor of the prosecution.
- A review of allegations that the CIA was involved in the importation of crack cocaine into Los Angeles by supporters of the Nicaraguan Contras in the 1980s. The investigation will focus on Department components and employees whose activities are the subject of these allegations.

GENERAL GOAL #1: Promote the efficiency and effectiveness of Department programs and operations.

A. Definitions of Terms or Explanations for Indicators						
* Information not available						
1. "Assignments" covers all audits including Internal, CDD, External, and UN Trustee, but not Single Act Audits, inspections, and special investigations and reviews by SIRI.						
"Assignments" may also include activities that do not result in a report or product, e.g. an assignment may result in a memorandum to file rather than a report. Investigations activities are covered under Goal #3.						
2. Products issued to Congress include all products issued to Congress, including reports, memoranda, and other products.						
3. Products issued to Department Senior management include all products issued to Department Senior management, including reports, memoranda, and other products.						
4. Percent of Department High Risk Areas addressed: High Risk Areas are defined as areas identified in the Department's High Risk Areas report.						
5. Reports and recommendations include all reports and recommendations issued by the Department, including reports, memoranda, and other products.						
6. Reports and recommendations include all reports and recommendations issued by the Department, including reports, memoranda, and other products.						
7. Reports and recommendations include all reports and recommendations issued by the Department, including reports, memoranda, and other products.						
B. Factors Affecting FY 96 Program Performance						
Two difficult, lengthy, budget uncertainty, and severe budget constraints resulted in a number of debilitating systemic issues, including a hiring freeze and limited travel.						
C. Factors Affecting Selection of FY 97, 98, and 99 Targets						
** Assumes that the OIG receives requested FTE from the Voluntary Leave Reduction Trust Fund at R.D. 25 in FY 1998 and FY 1999.						

GENERAL GOAL #2: Improve and better monitor and protect the nation's justice system.

* Information not available. 1. Includes Audit and Inspection Divisions. 2. Each Division conducts its own customer surveys.						
B. Factors Affecting FY 96 Program Performance						
Two findings, largely related to accuracy and error, budget constraints, resulted in a number of budgetary activities, including a hiring freeze and limited travel.						
C. Factors Affecting Selection of FY 95, 96, and 99 Targets						
** Assumes that the Office receives requested FTO from the Auditor General within 100 days of the request, and that the Auditor General's report is received by the Inspector General within 100 days of the request.						

JUSTIFICATION FOR VCRIF TRANSFER REQUEST

Although not technically a program change, the OIG is requesting that the Attorney General be authorized to transfer up to one tenth of one percent of DOJ's VCRIF funding for oversight work on those programs. These funds will enable us to expand the coverage, monitoring, and oversight of the various Crime Bill programs and related grants during the coming years. Present OIG resources have been used to assist in the early stages of several of the COPS initiatives, but these resources are too limited to ensure that the VCRIF funds are spent appropriately and achieve their intended purposes. We propose a level of activity that will enable the OIG to form an opinion on at least part of the Crime Bill programs. We believe that this objective will provide deference and will enable the Department to obtain OIG examination of selected problem or troubled grants and programs. We believe the one tenth of one percent formula provides an extremely modest level of resources to help ensure the integrity and efficiency of these programs, particularly when viewed against the potential for risk. As stated earlier, we anticipate this level of funding will prove sufficient to support 25 FTE in FY 1998 and an additional 15 FTE in FY 1999.

The positions will be staffed in OIG regional audit offices nationwide, including Washington, D.C., to strengthen and enhance what is currently severely limited coverage of the programs and grants funded by the VCRIF. Priority areas of Crime Bill funding, as articulated by the Congress and the Attorney General, will be specifically targeted. Due to the size of the grant programs, geographic distribution of the grant recipients, and the requests of the Department's Community Oriented Policing Office (COPS), the OIG will use these resources to specifically target the following programs:

- ◆ Community Oriented Policing Services (COPS) -- between FY 1995 and FY 2000, total program costs are projected at \$8.8 billion.
- ◆ Violent Offender Incarceration -- total program funding is projected at almost \$4 billion through FY 2000.
- ◆ Truth in Sentencing -- total program funding is projected at almost \$4 billion by FY 2000.
- ◆ Violence Against Women Act -- during the FY 1997 OIG budget hearings, the House Appropriations subcommittee identified this program as an area of concern.

These programs represent over \$17.0 billion in projected costs over the life of the grant programs. With the requested positions, the OIG expects to complete approximately 100 audits in FY 1998. Of these projected 100 grant audits, we expect to devote 75 percent of the resources to conducting audits of COPS grants. The OIG has been working with the Department's COPS office in the development of a monitoring plan for COPS grants. Due to extremely limited resources and myriad operational demands, we have only been able to tentatively schedule 20 COPS grants for audit in FY 1997. To date, over 9,000 grants have been awarded, leaving an unacceptable percentage of COPS grants with little or no Departmental oversight.

Other Crime Bill programs and grants also require Departmental oversight. Thus, 10 percent of the requested resources will be devoted to Violent Offender Incarceration grants. Another 10 percent will be allocated for Truth in Sentencing grants. The remaining 5 percent of requested resources will be for the Violence Against Women Act grants. Clearly, these percentages could be modified depending on a risk determination balanced against Departmental priorities.

Justification of Adjustments to Base
(Dollars in Thousands)

	Pos.	WTY	Amount
Increases:			
1. 1998 pay raise This request provides for the proposed 2.8 percent pay raise to be effective in January 1998 and is consistent with Administration policy included in the President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$653,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$500,000 for pay and \$153,000 for benefits).		...	653
2. Annualization and Increase of 1997 pay raise This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$176,000, represents the pay amounts for the first quarter of the year plus appropriate benefits (\$134,000 for pay and \$42,000 for benefits).		...	176
3. Within-grade increases This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population that includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization (\$270,000 for pay and \$81,000 for benefits).		...	351
4. Mileage allowance rate increase The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$6,000 is requested in 1998 to cover this rate adjustment.		...	6
			150

Justification of Adjustments to Base (Continued)
(Dollars in Thousands)

	<u>Pos.</u>	<u>WY</u>	<u>Amount</u>
5 Correspondence Management System An increase of \$3,000 is required to fund costs associated with the Attorney General's Correspondence Management System. This new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved record keeping, and improved reporting capability.		3	
6 Investigation/Reinvestigation Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in any department or agency of the Government shall be made subject to a background investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring background investigations and reinvestigations are timely initiated on appointed civilian officers and employees.		1	
7 General pricing level adjustments This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		61

EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

Approved: *Janet Reno* Date: 05/17/95
 JANET RENO
 Attorney General

**Administrative Review and Appeals
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

The Administrative Review and Appeals appropriation is requesting, for 1998, a total of \$70,007,000, 520 permanent positions and 524 workyears. This represents an increase of \$7,007,000, 2 positions and 50 workyears over the 1997 appropriation enacted. This appropriation contains the Executive Office for Immigration Review and the Office of the Pardon Attorney.

Executive Office for Immigration Review

The Executive Office for Immigration Review (EOIR) is headed by the Office of the Director and is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer. The Board of Immigration Appeals adjudicates appeals from decisions of Immigration Judges and certain officials of the Immigration and Naturalization Service (INS) in a wide variety of immigration proceedings. The Office of the Chief Immigration Judge manages the operations of Immigration Judges located in thirty-eight field offices nationwide. Generally, Immigration Judges hold hearings to establish the immigration status of aliens, including criminal aliens, and those seeking asylum as a form of relief from deportation. The Office of the Chief Administrative Hearing Officer manages the operations of EOIR's Administrative Law Judges, who adjudicate cases arising from the employer sanctions, discrimination, and document fraud provisions of immigration law.

The request includes a modest increase which will enable EOIR to respond to an increasing workload associated with the implementation of the Electronic Freedom of Information Act Amendments of 1996.

Office of the Pardon Attorney

The Office of the Pardon Attorney (OPA) receives, investigates, and considers petitions for all forms of Executive clemency and serves as the principal liaison with the general public in clemency matters. OPA also responds to controlled communications referred from the Department's Executive Secretariat and the White House. The OPA request includes an increase for the modernization of its computer system.

Administrative Review and Appeals

Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Administrative Review and Appeals

For expenses necessary for the administration of pardon and clemency petitions and immigration related activities, \$62,000. For an additional amount for security measures for the Executive Office of Immigration Review, \$1,000,000: Provided, that the entire amount is designated by Congress as an emerging requirement pursuant to section 251 (b) (2) (D) (i) of the Balanced Budget, and Emergency Deficit Control Act of 1985, as amended] \$70,007,000.

Explanation of change

1. Deleted language relates to the emergency requirement in 1997.

Total	581	73,411	(63)	(23)	0	0	518	474

* 1997 Congressional Action reduced funding. However, Congress did provide \$1481 for the Office of the Pardon Attorney and for the Executive Office for Immigration Review (EOIR). \$6496 is included to support 24 additional immigration judges for border control and removal of criminal and non-criminal aliens. \$1935 is for 20 additional attorneys for the Board of Immigration Appeals. \$1500 is for ADP systems modernization, and \$1000 is for enhanced building and court security.

The Executive Office for Immigration Review received \$5,000,000 in 1996 and will receive \$1,200,000 in both 1997 and 1998 for costs associated with interpreter and transcription contracts, key elements of the immigration adjudication process.

Administrative Review and Appeals
Salaries and Expenses
Records Performance Information
Government Performance and Results Act Requirements

MISSION: The Attorney General is charged with the administration and enforcement of the Immigration and Nationality Act of 1952 and all other laws relating to the immigration and naturalization of aliens, including the Immigration Reform and Control Act of 1986, the Immigration Act of 1990, the Violent Crime Control and Law Enforcement Act of 1994, and most recently, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA). The Attorney General has delegated certain aspects of her authority to administer and interpret the immigration laws to the Executive Office for Immigration Review (EOIR). Generally, EOIR's mission is to provide a uniform interpretation and application of immigration law, ensuring fair treatment for all parties involved.

GENERAL GOALS:

1. To expedite all immigration cases for which EOIR is responsible, including cases involving detained aliens, criminal aliens, and aliens seeking asylum as a form of relief from deportation or exclusion, while ensuring the standards of due process and fair treatment for all parties involved.
2. To fully implement the case processing and adjudication provisions of the Comprehensive Asylum Reform Initiative, rendering immigration judge decisions in all new asylum cases within 180 days of the date of filing.
3. To fully implement the case processing goals of the Expedited Deportation of Criminal Aliens Initiative, rendering decisions in all criminal alien cases prior to each alien's release from incarceration.
4. To increase productivity by streamlining procedures and implementing management improvements.

NOTE: IIRIRA, the key provisions of which become effective on April 1, 1997, extensively revises the Immigration and Nationality Act and amends the current immigration hearing process. "Deportation" and "exclusion" cases described herein will continue for those aliens charged prior to April 1, 1997. Aliens subsequently charged will be subject to "removal" proceedings which will replace deportation and exclusion hearings.

	Para. EOA.	FTE	Amount
ACTIVITY: EOIR			
1997 Appropriation Anticipated	518	474	\$63,000
1998 Base	518	523	69,867
- 998 Estimate	520	524	70,007

Base Program Description: EOIR, headed by the Office of the Director, is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer. The Office of the Associate Director provides legal and administrative support to the Director and to the three adjudicative components. Operations include thirty-eight field offices located nationwide.

The volume, nature and geographic concentration of Immigration Judge, Administrative Law Judge and appellate caseload is entirely dependant upon external factors, primarily the enforcement, investigation, adjudication and detention policies and actions of the Immigration and Naturalization Service (INS).

The following provides more detailed information concerning the responsibilities and activities of EOIR's components:

Board of Immigration Appeals

Under the direction of the Chairman, the Board hears appeals from decisions of Immigration Judges and certain decisions of INS officers in a wide variety of proceedings in which the Government of the United States is one party and the other party is either an alien, a citizen or a business firm. The Board is directed to exercise its independent judgment in hearing appeals for the Attorney General and provides a nationally uniform application of the Immigration laws, both in terms of the interpretation of the law and the exercise of the significant discretion vested in the Attorney General. The majority of cases before the Board involve appeals from orders of Immigration Judges entered in deportation and exclusion proceedings.

The appeals from the decisions of INS officers reviewed by the Board principally involve appeals from familial visa petition denials and decisions involving administrative fines. The Board also renders decisions on applications by organizations that have requested permission to practice before the Board, the Immigration Judges, and INS and renders decisions on individual applications by employees of such organizations.

The Board's mission requires that national policies, as reflected in immigration laws, be identified, considered, and integrated into its decisional process. The Board plays the major role in interpreting the immigration laws of this country, an area of law the courts have characterized as uniquely complex. Processing increasing caseload has been a challenging task in a time of almost constant major legislative action in the immigration field. The Board has provided the principal interpretation of the Immigration Reform and Control Act of 1986 (IRCA), the Immigration Amendments of 1988, the Anti-Drug Abuse Act of 1988, and the Immigration Act of 1990 (IMACT 90). Two of these laws (IRCA and IMACT 90) represented the most fundamental restructuring of the Immigration and Nationality Act since its enactment in 1952 and have presented a myriad of new issues of statutory construction. The Board has issued interpretive decisions and, has then reinterpreted the Act as the laws have been redrafted.

In response to the continuously increasing caseload associated with various administration initiatives and legislative developments, the Board has initiated a variety of management and regulatory improvements designed to increase efficiency and productivity. A key initiative has been the expansion of the Board from five to fifteen members, allowing the consideration of appeals using five panels. Further, Board attorney staff has been restructured into eight discrete teams, each assigned directly to a Board panel. These structural changes have improved caseload management, accountability and communication.

In addition to management initiatives, EOIR has continued to improve programs through the regulatory process. As an example, the new Motions and Appeals Regulation, signed by the Attorney General on April 16, 1998 and effective on July 1, 1998, streamlined the motions and appeals practice before the Board by requiring that appeals from Immigration Judge decisions and motions to reopen and reconsider decisions by the Board be filed directly with the Board. These provisions have allowed the Board to assume direct control of filings, replacing a cumbersome and decentralized system of filing at INS District Offices. Further, the regulation establishes time and number limitations on motions to reopen and on motions to reconsider.

The Board continues to experience a dramatic rise in caseload, increasing from the 12,774 appeals received in 1992 to 20,423 in 1996, representing a 60% increase. Receipts for 1997 and 1998 are projected to exceed 24,000 and 26,000 appeals, respectively, representing an increase of over 100% since 1992. The expansion of INS enforcement programs requested for 1998 will add approximately 1,700 appeals annually to the Board.

Office of the Chief Immigration Judge

The Chief Immigration Judge provides overall program direction, articulates policy, and establishes priorities for the Immigration Judges located in thirty-eight field offices throughout the United States. Generally, Immigration Judges hold hearings to determine the status of an alien. Exclusion hearings are held when aliens are believed to be inadmissible to the United States. The Immigration Judge's order may admit or exclude an alien, or permit withdrawal of the application for admission. Deportation hearings are held in cases where an alien's status is challenged after entry into the United States. The Immigration Judge may order the alien deported; grant relief from deportation such as voluntary departure, suspension of deportation, registry, adjustment of status, political asylum or waiver of deportability; or, if the Immigration Judge decides that deportability has not been established, terminate the proceedings. Bond redetermination hearings are held when an alien in custody seeks release on his or her own recognizance or a reduction in the amount of the bond.

EOIR's responsibilities under Section 701 of IRCA require the coordination and conduct of civil deportation and exclusion proceedings to adjudicate the immigration status of alien inmates incarcerated by Federal, state and municipal correctional authorities as a result of convictions for criminal offenses. Through the Criminal Alien Institutional Hearing Program (CAIHP), EOIR currently has programs coordinated and in place in all 50 states, Puerto Rico, the District of Columbia and selected municipalities and Bureau of Prisons facilities. The CAIHP is a key component of a variety of initiatives designed to expedite the removal of criminal aliens and involves close coordination with the INS, BOP and state and local correctional authorities.

A new initiative announced by the Attorney General in May, 1995, established a pilot program in which the INS identifies deportable criminal aliens prior to their release from the Los Angeles County Jail. The INS assumes custody of these aliens, issues charging documents and brings them before Immigration Judges for deportation hearings. EOIR has established special court sessions in Los Angeles which focus on the expedited processing of these cases. Following an evaluation of the pilot, this initiative has become a permanent and highly successful program and has been expanded to include other local systems such as Dade Co., Florida.

Another initiative that targets criminal aliens is the Port Court program, begun in 1995. Port Court is a joint effort by several agencies within the Department of Justice (U.S. Attorneys, EOIR, and the INS) to identify, detain, and expeditiously adjudicate cases and effect the removal of criminal aliens as they attempt to enter this country through the various ports of entry in Southern California. The objectives of Port Court are twofold. First, by entering orders of exclusion against aliens, they can immediately be released from detention and deported to their country of nationality. This avoids additional detention costs that would otherwise be borne by U.S. taxpayers. Secondly, by removing criminal aliens from detention, additional bed space becomes available in prisons and detention facilities. This, in turn, allows the government to prosecute and incarcerate other criminals who must be removed from society. The success of this program has led to its expansion to include proceedings involving non-criminal as well as criminal aliens. As an example, EOIR and INS established a "port court" at the Miami International Airport on July 1, 1996.

Asylum reform has streamlined the procedures involved in processing asylum cases, integrated INS and EOIR processes, and eliminated duplicative adjudications. Claims that are not approved by INS are automatically referred to EOIR's Immigration Judges who conduct full asylum adjudications in the context of deportation or exclusion hearings. The new asylum procedures, which became effective in January, 1995, include provisions limiting the INS approval of employment authorization to those aliens who have gained asylum or whose applications are not adjudicated within 180 days of their filing date. As a consequence, the success of asylum reform is largely dependent upon the ability of Immigration Judges to render decisions within these timeframes. Absent that ability, the benefit of work authorization would accrue to thousands of aliens not otherwise entitled. Currently, Immigration Judges are completing 95% of the new expedited asylum adjudications within the 180-day timeframe.

EOIR has coordinated the implementation of expanded programs with the INS to ensure the optimal placement of resources based upon the volume and geographic concentration of asylum and criminal alien workload. This

includes the expansion of a majority of field offices and the establishment of several new offices. EOIR's ADP system has been modified to facilitate the implementation of asylum reform by enhancing case tracking capabilities, e.g., the tracking of case processing times, and by allowing all local and regional INS asylum offices access to the system. Among other benefits, these improvements have allowed the introduction of two key case processing initiatives. First, INS personnel are able to access the AMSIR system and schedule cases for Immigration Judge hearings immediately upon their decisions to refer asylum claims to EOIR. Second, INS regional service centers are able to access the AMSIR database to ascertain the status of cases in order to determine the eligibility of aliens for employment authorization. Further, EOIR has coordinated with INS to enable the "download" of a wide range of case information which will assist several service programs.

EOIR has also been active in the regulatory area. EOIR published regulations which include provisions allowing the use of stipulated deportations, thereby enabling the expedited deportation of criminal aliens in applicable cases. Regulations have also been published which codify the practice of Immigration Judges conducting telephonic hearings and the authority of Immigration Judges to hold video electronic hearings. Most recently, EOIR worked closely with the Service in publishing the IIRRA regulations on January 3, 1997.

Finally, in keeping with the customer service goals of the National Performance Review, EOIR has established an electronic phone system (1-800 number) to provide ready access to Immigration Court information such as hearing dates, times and locations, status of asylum cases, Immigration Judge decisions and case appeal dates. The system, provided in English and Spanish, reduces the time required for the public to obtain information and schedules. Also included is information explaining the new Motions and Appeals Regulation.

Administration initiatives continue to have a significant impact upon EOIR's Immigration Judge program. During 1996, EOIR received a total of 163,443 Immigration Judge cases. This figure included approximately 18,000 pre-reform asylum cases and 14,000 criminal alien (INA) cases. In 1995, Immigration Judge workload increased to over 211,000 case receipts and in 1996 EOIR's Judges received 262,572 cases, representing a 6% increase since 1994. INS enforcement initiatives planned for 1997 and requested for 1998 will bring an estimated 30,000 additional cases by 1998. As a consequence, it is reasonable to assume that the Immigration Judge caseload will amount to well over 300,000 annual receipts by 1998.

Office of the Chief Administrative Hearing Officer

The Chief Administrative Hearing Officer provides overall program direction, articulates policies and procedures, and establishes priorities for the Administrative Law Judges (ALJs) appointed pursuant to 5 U.S.C. 3105 to adjudicate cases arising under Sections 101 and 102 of IRCA. Section 101 provides for sanctions against employers or entities who: (1) hire, recruit or refer for a fee or continue to employ unauthorized aliens; (2) refuse to comply with the employment verification system; or (3) require the execution of an indemnity bond to protect themselves from potential liability for unlawful employment practices. Section 102 provides for the imposition of penalties against employers who discriminate against any individual (other than an unauthorized alien) in employment-related situations because of the individual's national origin or citizenship status. Such judicial proceedings are initiated by complaints filed with the Office of the Chief Administrative Hearing Officer and assigned to ALJs. Complaints are filed by: (1) (101 cases)--the Immigration and Naturalization Service; (2) (102 cases)--the Office of Special Counsel for Immigration Related Unfair Employment Practices (OSC); or (3) (102 cases) if OSC declines a case,

an aggrieved party or a representative.

The ALJs hold hearings and related administrative proceedings and render decisions on the complaints assigned to them. They impose sanctions and penalties as prescribed by law in appropriate cases and may, where warranted, award attorney's fees, back pay, and issue cease and desist orders. The Chief Administrative Hearing Officer may conduct administrative reviews and takes the final agency action with respect to cases decided by ALJs under Section 101, and certifies ALJs who hear Section 102 cases as having received the requisite training in employment discrimination matters. In addition, pursuant to provisions of the Immigration Act of 1990, ALJs conduct hearings involving immigration document fraud, an area of increasing emphasis. Currently EOIR's ALJ program receives approximately 200 cases annually, a figure which is expected to rise as a result of a variety of INS workforce enforcement and related initiatives.

INITIATIVES

EOIR	Perm. Foll.	FY	Amount
Electronic Freedom of Information Amendments of 1996	2	1	\$ 106

Proposed Actions

To respond to the increased demands resulting from EFOIA.

Program Changes:

Over the last several years, EOIR has experienced a five-fold increase in FOIA requests, including many involving statistical reports, policy memoranda, personnel records and court calendars. The implementation of the EFOIA will increase workload both in terms of the number of requests received and the complexity of those requests. To successfully respond to these requests, EOIR will require additional paralegal and legal technician positions.

Increase/Decrease			

Base Program Description: Acting on delegated authority from the Attorney General, it is the responsibility of the Office of the Pardon Attorney to receive and review all executive clemency petitions, conduct the necessary investigation in conjunction with other Departmental and extra-Departmental components, and prepare the Attorney General's recommendation to the President.

Accomplishment and Workload:

	Actual 1994	Projected 1997	Projected 1998
Petitions pending, begin of year	1,039	1,180	1,130
Petitions received	512	550	600
Petitions disposed	371	600	700
Correspondence processed	5,047	5,050	5,050

Program Changes:

Office of the Pardon Attorney

Pers. Pos.	FTE	Amount
...	...	\$34

This increase seeks to address the following objectives:

- 1) The objective of this increase is to enhance the efficiency of OPA through the migration of OPA onto the Justice Consolidated Office Network.

A total of \$34,000, no positions and no FTE, are needed to allow OPA to modernize its computer system. This will allow OPA to respond effectively to its high volume and increasingly complex caseload, and maintain efficient communication with other Department components.

Performance Measurement Table: Presented by General Goal

General Goal 1: Asylum Reform: Streamline Asylum Processing to Expeditiously Complete All Asylum Cases, While Ensuring Fair Treatment to All Parties

• See INS Regarding Statistical Information Regarding End Outcomes

January 31, 1997

<p>GENERAL GOAL 1: Asylum Reform: Streamline asylum processing to expeditiously complete all asylum cases, while ensuring fair treatment to all parties.</p>	<p>A. Definitions of Terms or Explanation for Indicators: Expedited Asylum Cases include cases where the initial asylum application was filed and the charging document was issued post reform. This includes both affirmative claims where the application was originally filed with INS and referred to EOIR and defensive claims where the alien files an asylum application during the proceedings before the Immigration Judge. In FY96 expedited asylum cases represent a subset of the 83,000 total number of asylum cases received. Outyear inputs are based on INS estimates.</p> <p>B. Factors Affecting Performance: In FY 95 the INS asylum office referred a small fraction of the cases they projected would be referred. The Judges were easily able to accommodate the caseload at the lower level. In FY96, at the higher level of receipts, the IJs were still able to complete 95% within the timeline goals.</p> <p>C. Factors Affecting FY 96 and FY 97 Targets: The volume, nature, and geographic concentration of EOIR's caseload is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>
---	---

Performance Measurement Table: Presented by General Goal

General Goal 2: Complete All Institutional Hearing Program (IHP) Cases Prior to the Alien's Earliest Possible Release Date While Ensuring Fair Treatment to All Parties						
Performance Indicator Information		Performance Targets and Actual Results				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target

Output/Activity	2. IHP Cases Completed	11,123	15,690	14,188	20,000	25,000
Intermediate Outcome	3. % of IHP Cases Completed by IJs Prior to the Alien's Earliest Possible Release Date	91.5%	93.4%	94.0%	95.0%	95.0%
End Outcome	4. Fewer Crimes Committed by Aliens	*	*	*	*	*

* See INS Regarding Statistical Information Regarding End Outcomes

<p>GENERAL GOAL 2: Complete all Institutional Hearing Program Cases prior to the Aliens Earliest Possible Release Date, while ensuring due process.</p>
<p>A. Definitions of Terms or Explanation for Indicators: IIP Cases include all cases in which the charging document is served on the Immigration Court while the alien is incarcerated in a federal, state, or municipal facility as a result of a criminal conviction. Immigration Judges travel to these facilities to hear the cases prior to the alien's release from incarceration. This does not include aliens criminally charged who are either in INS custody or have been released from custody. Outyear input figures are based on INS estimates.</p>
<p>B. Factors Affecting Program Performance: The volume, nature, and geographic concentration of EOIR's IIP caseload is contingent on the allocation of INS investigative resources to identify and charge incarcerated aliens with immigration violations and serve the charging documents in EOIR.</p>
<p>C. Factors Affecting Targets: The volume, nature, and geographic concentration of EOIR's IIP caseload is contingent on the allocation of INS investigative resources to identify and charge incarcerated aliens with immigration violations and serve the charging documents in EOIR.</p>

Performance Measurement Table: Presented by General Goal

General Goal 3: Handle All Other Immigration Cases for Which EOIR is Responsible in a Timely Manner, While Ensuring Fair Treatment to All Parties						
Performance Indicator Information		Performance Targets and Actual Results				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target

	b. % Completed Within 8 Months of the Initial Hearing	83%	81%	84%	85%	85%
	5. Cases are adjudicated timely, aliens ordered deported are removed timely, thus discouraging illegal immigration	*	*	*	*	*

* See INS Regarding Statistical Information Regarding End Outcomes

<p>GENERAL GOAL 3: Handle all other immigration cases for which EOIR is responsible in a timely manner, while ensuring fair treatment for all parties.</p>	<p>A. Definitions of Indicators: Indicators 1 and 2 reflect all cases, appeals, and related matters received and completed by the Board, the Immigration Judges, and the Administrative Law Judges. Regarding indicators 3A - C, all deportation cases require a finding by the Judge whether or not an alien is deportable as charged by INS. In many instances, once a determination of deportability has been made, the alien files an application for relief from deportation such as asylum, adjustment of status or suspension of deportation. These cases generally take longer to complete and require a separate hearing on the merits of the application. Therefore, the timeline goals are set based on whether or not an application for relief has been filed.</p>
<p>B. Factors Affecting Performance: The volume, nature, and geographic concentration of EOIR's case/load is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>	<p>C. Factors Affecting Targets: The volume, nature, and geographic concentration of EOIR's case/load is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>

Administrative Review and Appeals Salaries and Expenses Justification of Adjustments to Base (Dollars in Thousands)			Pos.	Work- year	Amount
Adjustments to base:					
Increases:					
1. 1998 Pay Raise	This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$817, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$572 for pay and \$245 for benefits = \$817).				817
2. Annualization of 1997 Pay Raise	This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$175, represents the pay amounts for the first quarter of the year plus appropriate benefits (\$122 for pay and \$53 for benefits)				175
3. Within-grade Increase	This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$431 for pay and \$185 for benefits				616

	Pos.	Work- years	Amount
4 Annualization of 1997 Positions		49	\$ 5,064
Annual salary rate of 99 approved positions			5,584
Less Lapse			(2,792)

			1,685
			5,064
5 General Pricing Level (GPL) Adjustments			184
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.			
6 Correspondence Management System			9
An increase of \$9,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, which provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved record keeping, and improved reporting capability.

EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

Approved: *Janet Reno* Date: 05/17/95
 JANET RENO
 Attorney General

**Violent Crime Reduction Program
Administrative Review and Appeals
Summary Statement
Fiscal Year 1998**

The Violent Crime Reduction Program (VCRP)/Administrative Review and Appeals appropriation is requesting a total of \$59,251,000, 617 permanent positions and 583 workyears. This represents an increase of \$11,251,000, 103 positions and 52 workyears over the 1997 appropriation enacted.

Executive Office for Immigration Review

The Executive Office for Immigration Review (EOIR) is headed by the Office of the Director and is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer. The Board of Immigration Appeals adjudicates appeals from decisions of Immigration Judges and certain officials of the Immigration and Naturalization Service (INS) in a wide variety of immigration proceedings. The Office of the Chief Immigration Judge manages the operations of Immigration Judges located in thirty-eight field offices nationwide. Generally, Immigration Judges hold hearing to establish the immigration status of aliens, including criminal aliens and those seeking asylum as a form of relief from deportation.

Program increases include 28 Immigration Judges, 12 Board attorneys and necessary legal support positions. The request is made in coordination with proposed INS enforcement initiatives and in response to the Service's implementation of the Antiterrorism and Effective Death Penalty Act of 1996 (AEDPA).

Violent Crime Reduction Program
Administrative Review and Appeals
Salaries and Expenses
Program Performance Information
Government Performance and Results Act Requirements

MISSION: The Attorney General is charged with the administration and enforcement of the Immigration and Nationality Act of 1952 and all other laws relating to the immigration and naturalization of aliens, including the Immigration Reform and Control Act of 1986, the Immigration Act of 1990, the Violent Crime Control and Law Enforcement Act of 1994, and most recently, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA). The Attorney General has delegated certain aspects of her authority to administer and interpret the immigration laws to the Executive Office for Immigration Review (EOIR). Generally, EOIR's mission is to provide a uniform interpretation and application of immigration law, ensuring fair treatment for all parties involved.

GENERAL GOALS:

1. To expedite all immigration cases for which EOIR is responsible, including cases involving detained aliens, criminal aliens, and aliens seeking asylum as a form of relief from deportation or exclusion, while ensuring the standards of due process and fair treatment for all parties involved.
2. To fully implement the case processing and adjudication provisions of the Comprehensive Asylum Reform initiative, rendering Immigration Judge decisions in all new asylum cases within 180 days of the date of filing.
3. To fully implement the case processing goals of the Expedited Deportation of Criminal Aliens initiative, rendering decisions in all criminal alien cases prior to each alien's release from incarceration.
4. To increase productivity by streamlining procedures and implementing management improvements.

NOTE: IIRIRA, the key provisions of which become effective on April 1, 1997, extensively rewrites the Immigration and Nationality Act and amends the current immigration hearing process. "Deportation" and "exclusion" cases described herein will continue for those aliens charged prior to April 1, 1997. Aliens subsequently charged will be subject to "removal" proceedings which will replace deportation and exclusion hearings.

ACTIVITY: EOIR		FYS		Amount
		Pers. Est.	FYS	
	1997 Appropriation Anticipated	514	531	\$48,000
	1998 Base	514	531	49,251
	1998 Estimate	617	583	59,251

Base Program Description: EOIR, headed by the Office of the Director, is responsible for the general supervision of the Board of Immigration Appeals, the Office of the Chief Immigration Judge, and the Office of the Chief Administrative Hearing Officer. The Office of the Associate Director provides legal and administrative support to the Director and to the three adjudicative components. Operations include thirty-eight field offices located nationwide.

The volume, nature and geographic concentration of Immigration Judge, Administrative Law Judge and appellate caseload is entirely dependent upon external factors, primarily the enforcement, investigation, adjudication and detention policies and actions of the Immigration and Naturalization Service (INS).

The following provides more detailed information concerning the responsibilities and activities of EOIR's components:

Board of Immigration Appeals

Under the direction of the Chairman, the Board hears appeals from decisions of Immigration Judges and certain decisions of INS officers in a wide variety of proceedings in which the Government of the United States is one party and the other party is either an alien, a citizen or a business firm. The Board is directed to exercise its independent judgment in hearing appeals for the Attorney General and provides a nationally uniform application of the immigration laws, both in terms of the interpretation of the law and the exercise of the significant discretion vested in the Attorney General. The majority of cases before the Board involve appeals from orders of Immigration Judges entered in deportation and exclusion proceedings.

The appeals from the decisions of INS officers reviewed by the Board principally involve appeals from familial visa petition denials and decisions involving administrative fines. The Board also renders decisions on applications by organizations that have requested permission to practice before the Board, the Immigration Judges, and INS and renders decisions on individual applications by employees of such organizations.

The Board's mission requires that national policies, as reflected in immigration laws, be identified, considered, and integrated into its decisional process. The Board plays the major role in interpreting the immigration laws of this country, an area of law the courts have characterized as uniquely complex. Processing increasing caseload has been a challenging task in a time of almost constant major legislative action in the immigration field. The Board has provided the principal interpretation of the Immigration and Nationality Act of 1952 (INA), the Immigration Act of 1966 (IRCA), the Anti-Drug Abuse Act of 1988, and the Immigration Act of 1990 (IMACT 90). Two of these laws (IRCA and IMACT 90) represented the most fundamental restructuring of the Immigration and Nationality Act since its enactment in 1952 and have presented a myriad of new issues of statutory construction. The Board has issued interpretive decisions and has then reinterpreted the Act as the laws have been redrafted.

In response to the continuously increasing caseload associated with various Administration initiatives and legislative developments, the Board has initiated a variety of management and regulatory improvements designed to increase efficiency and productivity. A key initiative has been the expansion of the Board from five to fifteen members, allowing the consideration of appeals using five panels. Further, Board attorney staff has been restructured into eight discrete teams, each assigned directly to a Board panel. These structural changes have improved caseload management, accountability and communication.

In addition to management initiatives, EOIR has continued to improve programs through the regulatory process. As an example, the new Motions and Appeals Regulation, signed by the Attorney General on April 16, 1996 and effective on July 1, 1996, streamlined the motions and appeals practice before the Board by requiring that appeals from Immigration Judge decisions and motions to reopen and reconsider decisions by the Board be filed directly with the Board. These provisions have allowed the Board to assume direct control of filings, replacing a cumbersome and decentralized system of filing at INS District Offices. Further, the regulation establishes time and number limitations on motions to reopen and on motions to reconsider.

The Board continues to experience a dramatic rise in caseload, increasing from the 12,774 appeals received in 1992 to 20,423 in 1996, representing a 60% increase. Receipts for 1997 and 1998 are projected to exceed 24,000 and 26,000 appeals, respectively, representing an increase of over 100% since 1992. The expansion of INS enforcement programs requested for 1998 will add approximately 1,700 appeals annually to the Board.

Office of the Chief Immigration Judge

The Chief Immigration Judge provides overall program direction, articulates policy, and establishes priorities for the Immigration Judges located in thirty-eight field offices throughout the United States. Generally, Immigration Judges hold hearings to determine the status of an alien. Exclusion hearings are held when aliens are believed to be inadmissible to the United States. The Immigration Judge's order may admit or exclude an alien, or permit withdrawal of the application for admission. Deportation hearings are held in cases where an alien's status is challenged after entry into the United States. The Immigration Judge may order the alien deported; grant relief from deportation such as voluntary departure, suspension of deportation, registry, adjustment of status, political asylum or waiver of deportability; or, if the Immigration Judge decides that deportability has not been established, terminate the proceedings. Bond redetermination hearings are held when an alien in custody seeks release on his or her

own recognition or a reduction in the amount of the bond.

BOIR's responsibilities under Section 701 of IECA require the coordination and conduct of civil deportation and exclusion proceedings to adjudicate the immigration status of alien inmates incarcerated by Federal, state and municipal correctional authorities as a result of convictions for criminal offenses. Through the Criminal Alien Institutional Hearing Program (IHP), BOIR currently has programs coordinated and in place in all 50 states, Puerto Rico, the District of Columbia and selected municipalities and Bureau of Prisons facilities. The IHP is a key component of a variety of initiatives designed to expedite the removal of criminal aliens and involves close coordination with the INS, DOJ and state and local correctional authorities.

A new initiative announced by the Attorney General in May, 1995, established a pilot program in which the INS identifies deportable criminal aliens prior to their release from the Los Angeles County Jail. The INS assumes custody of these aliens, issues charging documents and brings them before Immigration Judges for deportation hearings. BOIR has established special court sessions in Los Angeles which focus on the expedited processing of these cases. Following an evaluation of the pilot, this initiative has become a permanent and highly successful program and has been expanded to include other local systems such as Dade Co., Florida.

Another initiative that targets criminal aliens is the Port Court program, begun in during 1995. Port Court is a joint effort by several agencies within the Department of Justice (U.S. Attorneys, BOIR, and the INS) to identify, detain, and expeditiously adjudicate cases and effect the removal of criminal aliens as they attempt to enter this country through the various ports of entry in Southern California. The objectives of Port Court are twofold. First, by entering orders of exclusion against aliens, they can immediately be released from detention and deported to their country of nationality. This avoids additional detention costs that would otherwise be borne by U.S. taxpayers. Secondly, by removing criminal aliens from detention, additional bed space becomes available in prisons and detention facilities. This, in turn, allows the government to prosecute and incarcerate other criminals who must be removed from society. The success of this program has led to its expansion to include proceedings involving non-criminal as well as criminal aliens. As an example, BOIR and INS established a "port court" at the Miami International Airport on July 1, 1996.

Asylum reform has streamlined the procedures involved in processing asylum cases, integrated INS and EOIR processes, and eliminated duplicative adjudications. Claims that are not approved by INS are automatically referred to EOIR's Immigration Judges who conduct full asylum adjudications in the context of deportation or exclusion hearings. The new asylum procedures, which became effective in January, 1995, include provisions limiting the INS approval of employment authorization to those aliens who have gained asylum or whose applications are not adjudicated within 180 days of their filing date. As a consequence, the success of asylum reform is largely dependent upon the ability of Immigration Judges to render decisions within these timeframes. Absent that ability, the benefit of work authorization would accrue to thousands of aliens not otherwise entitled. Currently, Immigration Judges are completing 95% of the new expedited asylum adjudications within the 180-day timeframe.

EOIR has coordinated the implementation of expanded programs with the INS to ensure the optimal placement of resources based upon the volume and geographic concentration of asylum and criminal alien workload. This includes the expansion of a majority of field offices and the establishment of several new offices. EOIR's ADP system has been modified to facilitate the implementation of asylum reform by enhancing case tracking capabilities, e.g., the tracking of case processing times, and by allowing all local and regional INS asylum offices access to the system. Among other benefits, these improvements have allowed the introduction of two key case processing initiatives. First, INS personnel are able to access the ANSIR system and schedule cases for Immigration Judge hearings immediately upon their decisions to refer asylum claims to EOIR. Second, INS regional service centers are able to access the ANSIR database to ascertain the status of cases in order to determine the eligibility of aliens for employment authorization. Further, EOIR has coordinated with INS to enable the "download" of a wide range of case information which will assist several service programs.

EOIR has also been active in the regulatory area. EOIR published regulations which include provisions allowing the use of stipulated deportations, thereby enabling the expedited deportation of criminal aliens in applicable cases. Regulations have also been published which codify the practice of Immigration Judges conducting telephonic hearings and the authority of Immigration Judges to hold video electronic hearings. Most recently, EOIR worked closely with the Service in publishing the IIRIRA regulations on January 1, 1997.

Finally, in keeping with the customer service goals of the National Performance Review, EOIR has established an electronic phone system (1-800 number) to provide ready access to Immigration Court information such as hearing dates, times and locations, status of asylum cases, Immigration Judge decisions and case appeal dates. The system, provided in English and Spanish, reduces the time required for the public to obtain information and schedules. Also included is information explaining the new Motions and Appeals Regulation.

Administration initiatives continue to have a significant impact upon EOIR's Immigration Judge program. During 1994, EOIR received a total of 163,443 Immigration Judge cases. This figure included approximately 18,000 pre-reform asylum cases and 14,000 criminal alien (CRA) cases. In 1995, Immigration Judge workload increased to over 211,000 case receipts and in 1996 EOIR's Judges received 262,572 cases, representing a 61% increase since 1994. INS enforcement initiatives planned for 1997 and requested for 1998 will bring an estimated 30,000 additional cases by 1998.

Office of the Chief Administrative Hearing Officer

The Chief Administrative Hearing Officer provides overall program direction, articulates policies and procedures, and establishes priorities for the Administrative Law Judges (ALJs) appointed pursuant to 5 U.S.C. 3105 to adjudicate cases arising under Sections 101 and 102 of IRCA. Section 101 provides for sanctions against employers or entities who: (1) hire, recruit or refer for a fee or continue to employ unauthorized aliens; (2) refuse to comply with the employment verification system; or (3) require the execution of an indemnity bond to protect themselves from potential liability for unlawful employment practices. Section 102 provides for the imposition of penalties against employers who discriminate against any individual (other than an unauthorized alien) in employment-related situations because of the individual's national origin or citizenship status. Such judicial proceedings are initiated by complaints filed with the Office of the Chief Administrative Hearing Officer and assigned to ALJs. Complaints are filed

by: (1) (101 cases)--the Immigration and Naturalization Service; (2) (102 cases)--the Office of Special Counsel for Immigration Related Unfair Employment Practices (OSC); or (3) (102 cases) if OSC declines a case, an aggrieved party or a representative.

The ALJs hold hearings and related administrative proceedings and render decisions on the complaints assigned to them. They impose sanctions and penalties as prescribed by law in appropriate cases and may, where warranted, award attorney's fees, back pay, and issue cease and desist orders. The Chief Administrative Hearing Officer may conduct administrative reviews and takes the final agency action with respect to cases decided by ALJs under section 101, and certifies ALJs who hear section 102 cases as having received the requisite training in employment discrimination matters. In addition, pursuant to provisions of the Immigration Act of 1990, ALJs conduct hearings involving immigration document fraud, an area of increasing emphasis. Currently EOIR's ALJ program receives approximately 200 cases annually, a figure which is expected to rise as a result of a variety of INS website enforcement and related initiatives.

INITIATIVES

EOIR	Perm. Pos.	FTE	Amount
Coordination With INS 1998 Initiatives	78	39	\$7,600
AEDPA	25	13	2,400
	103	52	10,000

Proposed Actions

These initiatives seek to address the following objectives:

1. To support and respond to INS' proposed enforcement initiatives, each of which will generate thousands of additional Immigration Judge cases and BIA appeals. Without coordinating sufficient adjudications resource increases with INS enhancements, the effectiveness of the initiatives is severely curtailed.
2. To adjudicate case increases resulting from the Department's response to AEDPA, i.e., increases in Service detention bedspaces.

Program Changes:

Coordination With INS Initiatives - INS has developed the following initiatives for 1998 which, taken together, will increase Immigration Judge caseload by 20,000 cases and BIA caseload by 1,700 appeals annually: 1) Border Control and Facilitation; 2) Removal of Criminal and Non-Criminal Aliens; and, 3) Interior Deterrence. EOIR's portion of these initiatives includes 21 Immigration Judges, 7 BIA attorneys, and the required legal and clerical support positions.

The three initiatives are fully explained in the INS 1998 Congressional Submission. In general, the Service is requesting additional Border Patrol, Detention and Deportation, Investigations, and Legal Proceedings positions in support of a variety of goals, including the following:

- to expand the Southwest Border Initiative
- to identify, detain and remove greater numbers of criminal and non-criminal deportable aliens
- to expand detention facility bedspace
- to continue the Port Court initiative
- to enhance worksite enforcement
- to expand interior investigations and removals
- to expand county and local jail initiatives

Critical to the success of these initiatives will be the ability of EOIR to process the resulting Immigration Judge and appellate caseload in a timely fashion. INS removal goals are, in large measure, inextricably tied to EOIR's adjudication process. Similarly, the efficient utilization of enhanced detention capacity is dependent upon the expedited processing of Immigration Judge and appellate caseload, thereby maximizing the number of aliens INS is able to process through the facilities.

AEDPA - The Department's response to the Anti-Terrorism and Effective Death Penalty Act of 1996 (AEDPA) includes an increase of Service detention bedspace. The resulting annual workload for EOIR is estimated to be approximately 7,000 new Immigration Judge cases and 600 new appeals for the BIA. The effectiveness of INS detention enhancements is largely dependent upon EOIR's ability to adjudicate the resulting caseload. This initiative requires an increase of 7 Immigration Judges, 3 BIA attorneys, and related support positions.

Performance Measurement Table: Presented by General Goal

14

<p>GENERAL GOAL 1: Asylum Reform: Streamline asylum processing to expeditiously complete all asylum cases, while ensuring fair treatment to all parties.</p>	<p>A. Definitions of Terms or Explanation for Indicators: Expedited Asylum Cases include cases where the initial asylum application was filed and the charging document was issued post reform. This includes both affirmative claims where the application was originally filed with INS and referred to EOIR and defensive claims where the alien files an asylum application during the proceedings before the Immigration Judge. In FY96 expedited asylum cases represent a subset of the 83,000 total number of asylum cases received. Outyear inputs are based on INS estimates.</p>
<p>B. Factors Affecting Performance: In FY 95 the INS asylum office referred a small fraction of the cases they projected would be referred. The Judges were easily able to accommodate the caseload at the lower level. In FY96, at the higher level of receipts, the IJs were still able to complete 95% within the timeline goals.</p>	<p>C. Factors Affecting FY 96 and FY 97 Targets: The volume, nature, and geographic concentration of EOIR's caseload is entirely dependent upon external factors; primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>

Performance Measurement Table: Presented by General Goal

General Goal 2: Complete All Institutional Hearing Program (IHP) Cases Prior to the Alien's Earliest Possible Release Date While Ensuring Fair Treatment to All Parties						
Performance Indicator Information		Performance Targets and Actual Results				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target
Input	1. IHP Cases Received	13,277	15,686	14,176	20,000	25,000
Output/Activity	2. IHP Cases Completed	11,123	15,690	14,188	20,000	25,000
Intermediate Outcome	3. % of IHP Cases Completed by IJs Prior to the Alien's Earliest Possible Release Date	91.5%	93.4%	94.0%	95.0%	95.0%
End Outcome	4. Fewer Crimes Committed by Aliens	*	*	*	*	*

* See INS Regarding Statistical Information Regarding End Outcomes

<p>GENERAL GOAL 2: Complete all Institutional Hearing Program Cases prior to the Aliens Earliest Possible Release Date, while ensuring due process.</p>
<p>A. Definitions of Terms or Explanation for Indicators: IIP Cases include all cases in which the charging document is served on the Immigration Court while the alien is incarcerated in a federal, state, or municipal facility as a result of a criminal conviction. Immigration Judges travel to these facilities to hear the cases prior to the alien's release from incarceration. This does not include aliens criminally charged who are either in INS custody or have been released from custody. Outyear input figures are based on INS estimates.</p>
<p>B. Factors Affecting Program Performance: The volume, nature, and geographic concentration of EOIR's IIP caseload is contingent on the allocation of INS investigative resources to identify and charge incarcerated aliens with immigration violations and serve the charging documents in EOIR.</p>
<p>C. Factors Affecting Targets: The volume, nature, and geographic concentration of EOIR's IIP caseload is contingent on the allocation of INS investigative resources to identify and charge incarcerated aliens with immigration violations and serve the charging documents in EOIR.</p>

Performance Measurement Table: Presented by General Goal

General Goal 3: Handle All Other Immigration Cases for Which EOIR is Responsible in a Timely Manner, While Ensuring Fair Treatment to All Parties						
Performance Indicator Information		Performance Targets and Actual Results				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target
Input	1 Total Matters Receipts	177,894	229,970	262,807	300,000	325,000
Output/Activity	2 Total Matters Completed	158,752	202,963	244,703	300,000	325,000
Intermediate Outcome	3 Detained Cases:					
	a Without Applications for Relief, % Completed by IJs Within 30 Days	94%	91%	92%	95%	95%
	b With Applications for Relief % Completed by IJs Within 3 Months	58%	51%	53%	60%	65%

	a % Having an Initial Hearing Within 3 Months of Receipt	68%	57%	56%	70%	70%
	b % Completed Within 8 Months of the Initial Hearing	83%	81%	84%	85%	85%
	5 Cases are adjudicated timely, aliens ordered deported are removed timely, thus discouraging illegal immigration	*	*	*	*	*

* See INS Regarding Statistical Information Regarding End Outcomes

<p>GENERAL GOAL 3: Handle all other immigration cases for which EOIR is responsible in a timely manner, while ensuring fair treatment for all parties.</p>	<p>A. Definitions of Indicators: Indicators 1 and 2 reflect all cases, appeals, and related matters received and completed by the Board, the Immigration Judges, and the Administrative Law Judges. Regarding indicators 3A - C, all deportation cases require a finding by the Judge whether or not an alien is deportable as charged by INS. In many instances, once a determination of deportability has been made, the alien files an application for relief from deportation such as asylum, adjustment of status or suspension of deportation. These cases generally take longer to complete and require a separate hearing on the merits of the application. Therefore, the timeline goals are set based on whether or not an application for relief has been filed.</p>
<p>B. Factors Affecting Performance: The volume, nature, and geographic concentration of EOIR's caseload is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>	<p>C. Factors Affecting Targets: The volume, nature, and geographic concentration of EOIR's caseload is entirely dependent upon external factors, primarily the enforcement, adjudication, and detention policies and actions of the INS.</p>

INCREASES:					
1. 1998 Pay Raise.....	This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustment as well as the general pay raise. The amount requested, \$615, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$424 for pay and \$191 for benefits = \$615).		615
2. Annualization of 1997 Pay Raise.....	This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$237, represents the pay amounts for the first quarter if the year plus appropriate benefits (\$164 for pay and \$73 for benefits).		237
3. General Pricing Level (GPL) Adjustments.....	This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the		399

market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

UNITED STATES PAROLE COMMISSION

Approved: 
 Edward F. Reilly, Jr.
 Chairman

Date: 20 Sept 1995

**U.S. Parole Commission
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

The 1998 budget request for the United States Parole Commission is \$4,799,000, 38 permanent positions, and 48 workyears. The request includes a program decrease of 5 positions, 5 workyears and \$157,000 as part of the Commission's continuing phase-down of operations.

The 1998 budget proposes a continuation of the down-sizing reductions that have been accomplished over the past several years in anticipation of the termination of the Commission on November 1, 2002 as required under legislation enacted on October 2, 1996 (P.L. 104-232). Currently, the Commission is responsible for over 19,000 "old law" defendants who remain in the Federal system. Of this old law caseload, approximately 7,100 are confined in federal facilities and 8,500 are on active supervision. The remainder are deportees who have not yet reached the end of their sentences, defendants who are serving state and/or "new law" federal sentences, and unapprehended parole violators with outstanding warrants. At the end of FY 1998, the Commission projects that there will be a caseload of 12,520, of which 4,539 will be prisoners, 5,510 will be on active supervision, and 2,471 will be deportees, new law prisoners and unapprehended parole violators. Although these numbers are steadily declining, substantial numbers will remain under the Commission's jurisdiction beyond the year 2000. Much of the remaining caseload is composed of prisoners and parolees who were convicted of violent or other very serious offenses, who are serving very long sentences.

U.S. Parole CommissionSalaries and ExpensesJustification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For necessary expenses of the United States Parole Commission as authorized by law, (\$4,845,000) + \$4,799,000
 (18 U.S.C. 4202-04, 4212, 4255, 5006, 5041; Department of Justice Appropriations Act, 1987.)

Explanation of changes

No substantive changes proposed.

Program and Performance Information
Government Performance and Results Act Requirements**

MISSION: To make decisions on grants and denials of parole, conditions of parole, supervision of parolees and mandatory releases, recommitment in event of violation of conditions of supervision, and termination of supervision as outlined in the Parole Commission and Reorganization Act of 1976.

ORGANIZATIONAL GOALS: To establish a national paroling policy and promote the consistent exercise of discretion in the paroling process, including the development and application of specific guidelines for decision-making so that the duration of terms of imprisonment throughout the Federal system will be equitable for those prisoners over whom the Commission has jurisdiction.

To make decisions regarding the grant or denial of parole that both promote justice and that protect the public welfare.

To provide adequate supervision for parolees and mandatory releases to enhance community protection and the rehabilitation of the offender.

To promptly modify or revoke the parole or mandatory release of any individual who violates the conditions of release.

BASE PROGRAM DESCRIPTION: The United States Board of Parole was created by Congress in 1930. The Parole Commission and Reorganization Act of 1976 (Public Law 94-233, effective May 14, 1976) renamed the agency as the United States Parole Commission and placed it within the Department of Justice for administrative purposes. The Commission is an agency with independent, decision-making powers set forth by statute. The Commission has parole jurisdiction over all eligible Federal prisoners, wherever confined, and continuing jurisdiction over those who are released on parole or as if on parole (mandatory release). The Parole Commission and Reorganization Act provides for nine Commissioners, one of which is designated Chairman, who are appointed by the President with the advice and consent of the Senate. Currently, there are three serving Commissioners, including the Chairman. One Commissioner makes regular parole decisions while the other Commissioners comprise the National Appeals Board. Cases that involve the most serious crimes, are high profile, or involve national security are designated as original jurisdiction for consideration by all of the Commissioners. National parole policy is made by formal Commission deliberation at quarterly meetings.

On a cooperative basis, the Commission uses the services of the staff employed by the Federal Prison System (FPS) and the Probation and Pretrial Services Division of the U.S. Courts. FPS staff, who are assigned to the correctional institutions throughout the nation, prepare progress reports and other reports concerning parole applicants. Field supervision of released prisoners is provided by Probation Officers of the Probation Service, who, pursuant to statute, function as "parole officers" for Federal prisoners. Reports concerning the adjustment of parolees and mandatory releases are prepared by these officers and submitted to the Commission.

As part of the Comprehensive Crime Control Act of 1984 (Public Law 98-493), the United States Sentencing Commission was established to develop and issue comprehensive guidelines for Federal cases. As a result, the current Federal parole system is scheduled to be phased out. These sentencing guidelines, which were developed in large part from guidelines that had been developed for the Parole Commission during the 1970's, went into effect on November 1, 1987. The original legislation provided for the Parole Commission to be phased out by November, 1992, but because of constitutional questions involving grants of parole for thousands of "old law" prisoners who would still be incarcerated at the termination date, the Judicial Improvements Act of 1990 (P.L. 101-560) extended the life of the Commission to November 1, 1997.

However, with substantial numbers of inmates and parolees still under the Commission's jurisdiction, the legislation was enacted on October 2, 1996 (P.L. 104-232) that provides for the continuation of the Commission until November 1, 2002 or until such time as the remaining numbers of "old law" prisoners are small enough for the paroling function to be transferred to an office under the Attorney General.

Hearing examiners appointed by the Commission conduct in person parole hearings with prisoners eligible for parole and make recommendations to the Commissioners. These hearings are conducted by examiners at Federal prisons where parole-eligible prisoners are held. Examiners also conduct revocation hearings at Federal and State and local facilities for parolees who have violated their conditions of parole. Summaries of the hearings are recorded, then transcribed and sent to the Commissioner's Office for review and decision of a Commissioner.

The Bureau of Prisons has continued to open new correctional facilities to accommodate the dramatically growing number of prisoners, and as new facilities have been opened, the Commission and BOP have agreed to concentrate parole-eligible inmates in fewer facilities in order to minimize the number of locations requiring hearing dockets. As of September 30, 1996, there were 94,715 prisoners in BOP facilities, of which 7,093 were parole-eligible. The parole eligible population is projected to be 5,674 on September 30, 1997.

When an individual is released on parole, conditions of release are imposed. The violation of any of these conditions could result in revocation of parole. The Commission has instituted a "zero tolerance policy" of illegal drug use by parolees. Any instance of illegal drug use by any parolee must be reported by the probation officer to the Commission. After the facts surrounding the violation are reviewed, a sanction or intervention is prescribed to correct or remedy the problem.

Warrants issued by the Commission to initiate the revocation of an inmate's parole, and the resulting revocation hearings, have remained at relatively constant levels over the past several years. Timely processing of warrants and revocation hearings are essential to the safety of the public and maintaining public confidence in the parole process. Revocation cases make a disproportionate demand on examiner and staff time because of their adversarial nature and because a majority of parolees in these cases are represented by counsel.

Initial hearings are due within 120 days of a newly-sentenced inmate's arrival in prison. Statutory interim hearings are due at 18 or 24 month intervals, pursuant to U.S.C. 4208(b), depending on the length of the sentence. Institutional revocation hearings are an important determinant of docket schedule. An alleged parole violator who is returned to an institution must be given a revocation hearing within the 90-day statutory deadline. Statutory deadlines effectively impose a bi-monthly docket schedule. Local revocation hearings are required to take place within 60 days of arrest at or near the location where the infraction or arrest occurred. Witnesses are present and produce what are the most work intensive hearings.

In 1974, the U.S. Board of Parole (as the Commission was then named) developed and implemented the first guidelines to be used anywhere to structure incarceration and release decision-making. All parole and sentencing guidelines developed in the United States are, for the most part, an outgrowth of federal parole guidelines. The new Federal sentencing guidelines were modeled after the parole guidelines. The guidelines and the independence of the Federal parole system were affirmed and strengthened by Congress when it passed the Parole Commission and Reorganization Act of 1976. The parole guidelines are built around a two dimensional matrix that considers offense severity on one axis and offender prognosis (risk) on the other. For each combination of offense severity and risk, the guidelines indicate a range of time to be served. The Commission may release outside the guideline range if it determines there is good cause for doing so. Inmates are furnished a written notice stating the reasons for the Commission's determination and a summary of the information relied upon. The

guidelines have played a significant role over the past two decades in reducing sentencing disparity. The act also enhanced due process, provided the right for inmates to have a representative at their hearing, and required that the reasons for denial be stated in writing.

Prisoners who are dissatisfied with the decision rendered after their hearing may file an appeal with the Commission's National Appeals Board (NAB). The NAB can affirm, modify or reverse the decision under provisions set forth in 28 CFR 2.26. The NAB must complete the action within 60 days of receipt of the appeal.

The Office of the Chairman provides overall management of the Commission's activities and functional supervision of the Hearing Examiners and Analysts. This office also provides quality control of case decisions, coordinates the training program, and is responsible for publication of the Parole Commission's Rules and Procedures manual (28 CFR 2.1 - 2.67).

The Legal Section, headed by the General Counsel, advises the Commissioners and staff on interpretation of the agency's enabling statutes and policy, drafts implementing rules and regulations and assists U.S. Attorney's Offices in defending the Commission against lawsuits brought by prisoners and parolees. The office is also a resource for staff on problems involving the processing of requests for information under the Privacy Act of 1974, as amended in 1975. The Office responds directly to requests submitted under the Freedom of Information Act. Finally, the Office has the responsibility for analyzing applications for exemption from prohibitions imposed by Federal law against persons who have been convicted of certain crimes from occupying labor union, management or pension fund positions, and ensuring that the hearings under the Administrative Procedures Act are properly conducted. The Commission's legal staff also participates with the State Department and other units of the Department of Justice on various phases of the development of treaties and implementing legislation for the exchange of prisoners with other countries.

An Administrative Office headed by the Executive Officer provides administrative support in the areas of personnel, budget and finance, procurement, and property and space management.

Parole Commission Downsizing	Perm Pos	WY	Amount
	-5	-5	.157

Proposed Actions

The 1998 budget proposes a continuation of the downsizing reductions that have been accomplished over the past several years in anticipation of the Commission's eventual termination. Currently, the Commission is responsible for over 19,000 "old law" defendants who remain in the Federal system. Of this old law caseload, approximately 7,100 are confined in federal facilities and 8,500 are on active supervision. The remainder are deportees who have not yet reached the end of their sentences, defendants who are serving state and/or "new law" federal sentences, and unapprehended parole violators with outstanding warrants. At the end of FY 1998, the Commission projects that there will be a caseload of 12,520, of which 4,539 will be prisoners, 5,510 will be on active supervision, and 2,471 will be deportees, new law prisoners and unapprehended parole violators. Although these numbers are steadily declining, substantial numbers will remain under the Commission's jurisdiction beyond the year 2000. Much of the remaining caseload is composed of prisoners and parolees who were convicted of violent or other very serious offenses, who are serving very long sentences.

A program decrease of five positions, five workyears and \$157,000 is requested to continue the downsizing during FY 1998.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL: To make decisions on grants and denials of parole, conditions of parole, supervision of parolees and releasees, recommitment in event of violation of conditions of supervision, and termination of supervision as outlined in the Parole Commission Reorganization Act of 1978 (18 U.S.C. 4201 et seq.)

Increases (Automatic, non-policy)

1	1998 Pay Raise This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$67,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$49,000 for pay and \$12,000 for benefits).	61
2	Annualization of 1997 Pay Raise This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$22,000, represents the pay amounts for the first quarter of the fiscal year plus appropriate benefits (\$18,000 for pay and \$4,000 for benefits).	22
3	Within-grade Increases This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. This request includes \$17,000 for pay and \$4,000 for benefits.	21
4	Correspondence Management System An increase of \$2,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.	2

Increases (Automatic, non-policy), continued

5 Investigation/Reinvestigation
Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in an any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.

6 General Pricing Level Adjustments
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

Legal Activities
Salaries and Expense, General Legal Activities
Summary Statement
Fiscal Year 1998

For 1998, the General Legal Activities (GLA) appropriation seeks a total budget of 3,568 positions, 3,598 workyears (excluding 362 reimbursable workyears) and \$466,557,000. This resource level represents an overall increase of 158 positions and 121 workyears above 1997 staffing levels; the requested funding level is \$51,645,000 above the 1997 availability. Adjustments to base include increases of \$14,666,000. The program changes requested for 1998 include increases of 170 positions, 120 workyears and \$29,379,000. The 1998 program changes are individually discussed below.

Tax Protesters Initiative. The Tax Division requests \$462,000 and 8 positions to staff its tax protester initiative. Specifically, the Division seeks to: develop a systematic approach for handling criminal prosecutions of organized tax protester groups; develop a systematic approach for handling defensive civil litigation brought against the Government by tax protester organizations; and individuals who identify themselves as associated with the tax protester movement; develop new strategies, including affirmative litigation, that will deter tax protester activities; and to provide training to Assistant United States Attorneys and IRS personnel so that criminal prosecutions of tax protesters and civil tax protester litigation are handled efficiently and effectively.

Drug Strategy.

Southwest Border Initiative. The Criminal Division seeks \$281,000 in additional funding, and three positions to increase its ability to coordinate and support the Southwest Border Initiative (SWBI) from headquarters. These positions will materially support the Attorney General's goal to achieve enhanced centralized management of the investigations and prosecutions related to this large-scale, multi-district initiative.

Federal Capital Case Prosecutions. The Criminal Division seeks \$192,000 in new funding, and two positions to address the increasing workload associated with Federal capital case prosecutions. Responsibilities of Criminal Division attorneys assigned to capital cases have expanded significantly with the advent of more aggressive legislation and a number of Department policies and procedures that have increased the Division's involvement in capital case reviews. Since 1994, the number of Federal capital case reviews, that the Division has been required to perform, has increased more than ten-fold.

Counterterrorism Resources.

Office of International Affairs. The Criminal Division seeks \$491,000 in additional funding, and nine positions for the Office of International Affairs to create a unit which will: collect, organize, and critically analyze all sensitive international law enforcement information and provide the Attorney General and senior managers within the Department with such information upon request; produce and provide any necessary briefing material on international matters; and, develop the capability to spot emerging trends and stay abreast of rapidly changing international developments.

International Extradition. The Criminal Division seeks \$199,000 in new funding, and two positions to augment existing resources dedicated to the rendering of international fugitives, witnesses, and evidence through extradition treaties and related executive agreements. With Congress' recent authorization of twelve new extradition and mutual legal assistance treaties, workload in this area will see a significant increase in 1998.

Computer Crime. The Criminal Division seeks \$454,000 in additional funds, and five positions to address the increasing incidence and complexity of computer crime. Additional resources will be engaged in development of legislation, the prosecution of computer terrorists, the strengthening of network integrity, as well as cooperating with foreign entities and governments in efforts to harmonize computer crime laws and eliminate procedural impediments in international hacker investigations.

Presidency of the G7/P8. The Criminal Division seeks \$764,000 in additional funding, and three positions to support the United States as it assumes the Presidency of the G7/P8 in 1997, and as summit agendas focus increasingly on terrorism, the Criminal Division will be relied upon to provide support and assistance to the myriad task forces originating from the G7/P8.

Overseas Positions. The Criminal Division requests \$1,205,000 in new funding, and three positions to increase its presence overseas by placing three attorneys at the following strategic locations: Manila to support East Asia, Brasilia to support South America, and Athens to support the Middle East. Division attorneys placed in these locations will enhance the Department's ability to respond quickly to legal issues and requests for assistance originating in the foreign field. Overseas attorneys with country-specific expertise will provide substantive guidance on treaty matters and extradition, as well as coordinating U.S. law enforcement policies in assigned regions.

International Coordination. The Criminal Division requests \$304,000 in new funding, and four positions to establish a Multi-Lateral Issue Team in the office of International Affairs. These additional resources will allow the Division to participate in, and materially contribute to, the large number of non-country specific, multi-lateral criminal justice initiatives. The Department's involvement in these multi-lateral fora has become increasingly important given the international enforcement effort against transnational crime and terrorism.

Minglar Litigation. The Civil Division seeks \$10,972,000 in additional funding, and seventy positions to allow the Division to defend claims from the enactment and implementation of the Financial Institution Reform, Recovery and Enforcement Act. A program increase is required to provide staff vital for an adequate defense and funding for core support activities. To cover more variable costs of the litigation, those associated with discovery, trial preparation, consultants, and transcripts, a transfer of \$33,700,000 is required from the FSLIC Resolution Fund.

Vaccine Injury Compensation Trust Fund Litigation. The Civil Division requests \$833,000 in additional funding to continue to support the litigation arising from the Vaccine Injury Compensation Trust Fund.

Combating Environmental Crime.

Vessel Pollution. The Environment and Natural Resources Division seeks \$240,000 in additional funding, and 4 positions to prosecute the intentional discharge of oil and other pollutants from vessels into the inland waterways and coastal waters of the United States.

Chlorofluorocarbons (CFC) Enforcement. The Environment and Natural Resources Division requests \$149,000 in additional funding, and 2 positions to enhance and improve its efforts in coordinating the National CFC Enforcement Initiative. Specifically, the increased resources will enable the section to; provide training to Assistant United States Attorneys, Customs Service agents, and representatives from other law enforcement agencies; develop strategies for CFC interdiction; and prosecute individuals charged with violating federal statutes and international treaties concerning the illegal importation of CFCs.

Civil Rights Prosecution. The Civil Rights Division seeks \$263,000 in additional funding, and three positions to enable the Civil Rights Prosecution Section to address the continued incidence of police brutality and violent and intimidating acts of racial, ethnic and religious hatred occurring across the Nation. The additional resources will enhance the ability of the Section to bring prosecutions under the federal criminal civil rights laws in a more timely manner.

Disability Rights. The Civil Rights Division seeks \$477,000 in additional funding to provide the Disability Rights Section with contract paralegal support to enhance and improve its efforts in enforcing the Americans with Disabilities Rights Act (ADA). Specifically, the increased resources will enable the Section to; investigate matters of possible noncompliance; to address complaints through alternative dispute resolution, provision of technical assistance, informal or formal

settlement agreement, or litigation; and, to increase, in number and effectiveness, the resolution of matters of alleged noncompliance under Titles II and III of the ADA.

Justice Consolidated Office Network (JCON) Implementation. The Department seeks \$7,100,000 in additional funding for implementation of the JCON. The bulk of the requested increase will go towards the conversion of the United States Attorneys Offices to JCON.

Electronic Freedom of Information Act (EOIA). The Department is requesting \$4,493,000 and 45 positions to enable the General Legal Activities organizations to implement the requirements of the recently enacted Electronic Freedom of Information Act Amendments of 1996.

Legal Activities
Salaries and Expenses, General Legal Activities
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underlined in bold and deleted matter is [enclosed in brackets].

Salaries and Expenses, General Legal Activities

For expenses, not otherwise provided for, necessary for the legal activities of the Department of Justice, [not otherwise provided for,] including not to exceed \$20,000 for expenses of collecting evidence, to be expended under the direction of, and to be accounted for solely under the certificate of, the Attorney General; [and rent of private or Government-owned space in the District of Columbia; \$420,793,000] \$466,557,000; of which not to exceed [all \$10,000,000 for litigation support contracts [shall remain available until expended: Provided, That of the funds available in this appropriation, not to exceed \$17,525,000] and (2) \$14,555,000 [shall remain available until expended] for office automation systems for [the] all legal divisions [covered by this appropriation] of the Department, [and] for the United States Attorneys, ~~for~~ the Antitrust Division, and for offices funded through "Salaries and Expenses", General Administration.;] shall remain available until expended. [Provided further, That of the total amount appropriated,] and of which not to exceed \$1,000 shall be available to the United States National Central Bureau, INTERPOL, for official reception and representation expenses: Provided [further], That notwithstanding 31 U.S.C. 1342, the Attorney General may accept on behalf of the United States, and credit to this appropriation, gifts of money, personal property and services, for the purpose of hosting the International Criminal Police Organization's (INTERPOL) American Regional Conference in the United States during fiscal year [1997] 1998: [Provided further, That not to exceed 8 permanent positions and 10 full-time equivalent workyears and \$987,000 shall be expended for the Office of Legislative Affairs and Public Affairs: provided further, That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or

nonreimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis].

In addition, for reimbursement of expenses of the Department [of Justice] associated with processing cases under the National Childhood Vaccine Injury Act of 1986[, not to exceed \$4,028,000 to be appropriated from the Vaccine Injury Compensation Trust Fund.] (Pub.L. 99-55, Title 3, 100 Stat. 3755; see 42 U.S.C. 201 note, as amended, not to exceed \$4,861,000 to be derived from the Vaccine Injury Trust Fund.

[For an additional amount for expenses of the Criminal Division relating to terrorism, \$1,719,000: Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(I) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.]

Explanation of changes.

The changes noted above are an effort by the Department to clarify the standard appropriation language used by the General Legal Activities appropriation.

Congressional Appropriation Action on 1997 Request. The Congress reduced the request by \$29,444,000. The Congress also provided funding for the Criminal Division requested in the Counterterrorism Amendment of 22 positions, 12 workyears, and \$1,711,000. All other program increases were denied.

Transfers from the FSUC Resolution Fund. The Congress directed that the Secretary of the Treasury make available to the General Legal Activities \$26,100,000 from the FSUC Resolution Fund. At the direction of the Office of Management and Budget it is reflected in the budget document as a transfer.

Adjustment in Positions and Workyears. The adjustment includes reductions to the Tax Division to more accurately reflect the level of positions and workyears funded by the organization.

Note: Due to decisions made after the preparation of the 1998 President's Budget Appendix the 1997 positions and workyears have been revised.

Salaries and expense, General Legal Activities
Justification of Adjustments to Base
(Dollars in thousands)

FTE Amount

Base Adjustments:

Increases:

1. 1998 pay raise.
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$6,276,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits.

6,276

2. Annualization and increase of 1997 pay raise.
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$2,142,000, represents the pay amounts for three months of the year.

2,142

3. Within-grade increases.....
 This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization.

2,824

4. Annualization of 22 additional positions approved in 1997...
 This provides for the annualization of 22 additional positions provided in 1997 Congressional Action for the Criminal Division. This request includes nonrecurring costs for one-time items associated with the increased positions.

1,064

	Approved	Annualization
	1997 Increases	Required
Annual salary rate of 22 approved positions	\$1,270	
Less lapse (50%)	635	\$635
Net Compensation	635	205
Associated employee benefits	191	92
Travel	88	49
Transportation of Things	47	1
GSA Rent	200	44
Communications/Utilities	43	35
Printing/Reproduction	34	112
Other Services	233	18
Supplies/Materials	17	

Equipment	231	(177)
Total costs subject to annualization	1,719	1,064
5. Foreign allowances..... Allowances for Government employees in foreign areas are determined by the Department of State (DOS).		1
6. Accident Compensation..... This increase reflects the billing provided by the Department of Labor (DOL) for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998.		140
7. Travel-mileage allowance rate increase..... The mileage allowance rate has increased from 30 to 31 cents per mile. An increase is requested in 1998 to cover this rate adjustment.		5
8. Correspondence management system..... An increase of \$158,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, which provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.		158
9. Investigation/reinvestigation..... Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in an any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor		

support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.

21

10. ICASS increase for staffing.....
Under the ICASS an annual charge will be made by the DOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, DOS has provided an increased cost estimate of \$12,000 for the Criminal Division and the Civil Division in 1998.

12

11. General pricing level adjustments.....
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.

1,460

14. Northern Mariana Islands.....
Prior to 1998, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding of \$237,000 is requested

19

to maintain current efforts in CNMI.	237
15. <u>INTERPOL - USNCB Dues</u>	
INTERPOL - USNCB is obligated to pay 102 budget units of dues on an annual basis. INTERPOL has implemented a plan to switch the currency of payments from Swiss francs to French francs, and raise dues for the member countries. The 1998 budget request is the second budget year in with the USNCB could incorporate these increases.	326
Total increases.....	10
	<u>14,666</u>

BASE PROGRAM DESCRIPTION: The major function of the Solicitor General's Office is to conduct Government litigation in the Supreme Court of the United States.

The Office of the Solicitor General is the government's foremost legal office. The original Statutory Authorization Act of June 22, 1870, states: "There shall be in the Department of Justice an officer learned in the law, to assist the Attorney General in the performance of his duties to be called the Solicitor General." As stated in 28 CFR 0.20, the general functions of the Office are as follows: (1) conducting or supervising all Supreme Court cases, including appeals, petitions for certiorari, writs of habeas corpus, and other matters; (2) preparing and presenting oral arguments before the Supreme Court; (3) determining whether a brief will be filed by the government, or whether the government will intervene, in any appellate court; and (4) assisting the Attorney General and the Deputy Attorney General in the development of broad department program policy.

During the 1995 Term of the Supreme Court (June 30, 1995 through June 30, 1996), the office had 304 Supreme Court matters pending at the beginning of the Term and received 2,715 additional matters during the Term, for a total of 3,019 matters. The office also completed approximately 920 appellate determinations, 728 SCILLEGAL determinations, and 786 miscellaneous recommendations. SCILLEGAL determinations include SCILLEGAL participation, mandamus, rehearing, settlement, stays, etc. The figure for miscellaneous recommendations does not include oral arguments in the Supreme Court, conferences, correspondence, etc. The attorneys in the office participated in 67 oral arguments before the Supreme Court.

The office anticipates an increase in the number of Supreme Court matters, appellate determinations, SCILLEGAL determinations, and miscellaneous recommendations in both 1997 and 1998. During the 1996 Term of the Supreme Court (July 1, 1996 through June 30, 1997), the office had 377 Supreme Court matters pending at the beginning of the Term, anticipates receiving an additional 2,987 Supreme Court matters, terminating approximately 2,914 of these matters, leaving a balance of 650 matters pending at the end of the Term. The office also anticipates completing approximately 923 appellate determinations, 732 SCILLEGAL determinations, 790 miscellaneous recommendations, and participating in approximately 67 oral arguments before the Supreme Court. During the Term of the Supreme Court (July 1, 1997 through June 30, 1998), the office anticipates receiving an additional 3,002 Supreme Court matters, terminating approximately 2,929 of these matters, leaving a balance of 523 matters pending at the end of the Term. The office also anticipates completing approximately 920 appellate determinations, 735 SCILLEGAL determinations, 794 miscellaneous recommendations, and participating in approximately 67 oral arguments before the Supreme Court.

This office does not initiate any programs or have control of the Supreme Court litigation. It is required to conduct or the number of appeal and SCILLEGAL determinations and enforcement of federal programs. Examples in recent Term include cases presenting significant issues of criminal procedure (affecting the government's ability to succeed in prosecutions), as well as important issues under the civil rights laws (such as the Voting Rights Act), the environmental laws (such as the Clean Water Act) and many others.

Notes:

*On early January 1997, the Tax Division agreed to implement the Restructuring Initiative launched in 1994, which resulted in a number of changes to the Division's positions and two years and their allocation among job types and divisions units. Thus, the figures in this budget request do not match figures supplied earlier in the year or those in the President's FY 1998 budget requests.

**This reflects funding as provided in the 1997 Conference Report (H.R. Conf. Rep. No. 104-463), 104th Congress, 2d Sess. (1995). The Tax Division's request to restore 11 workyears and \$1,176,000 not to absorb reductions in the FY 1996 base was denied.

***On FY 1997, the Tax Division will have to absorb approximately \$1.8 million in unabsorbed expenses. As a consequence, over the course of the year, the Division will eliminate 46 positions and 38 workyears. One extended workyear shown on this exhibit in previous budget submissions, plus 16 positions associated with the Organized Crime Drug Enforcement Task Force, have been moved to another exhibit because they reflect positions for which the Division receives reimbursement from outside the Department. Simultaneously, the Division has moved to implement the Restructuring Initiative that will make greater use of part-time and related litigation support positions and absorb some unabsorbed administrative and clerical positions.

****The Division expects that the over-absorbing majority of these reductions will be made in non-attorney positions.

Note

*In FY 1997, the Tax Division will have to absorb approximately \$10 million for unfunded expenses. As a consequence, over the course of the year, the Division will eliminate 46 positions and 38 workyears. (One criminal workyear and one management workyear, displayed in previous budget submissions as part of the Division's appropriation, plus 14 positions associated with the Organized Crime Drug Enforcement Task Force, have been shifted to reflect reimbursements received from outside the Department.) Simultaneously, the Division has started to implement its Restructuring initiative that will make greater use of paralegal and related litigation support positions and eliminate some unneeded administrative and clerical positions. Accordingly, FY 1997 workyears represent a bridge between the Division's traditional workforce and the workforce that will be in place when the Restructuring initiative is fully implemented at the end of FY 1998. Permanent positions for FY 1997 and FY 1998 represent the sum of full- and part-time permanent positions supported by available funding plus a five percent lapse rate to take account of personnel turnover.

Tax Division
Salaries and Expenses, General Legal Activities
Mission and Goals

MISSION

The primary mission of the Tax Division is to enforce the country's tax laws in Federal and state courts and thereby generate revenue for the Federal Government. The Division's tax enforcement has a two-pronged mission: (1) to deter specific taxpayers from conduct that drains the Federal fisc, and (2) to deter the taxpaying public at large through successful specific deterrence. By judiciously allocating its resources between specific and general deterrence, the tax enforcement litigation conducted by Division attorneys ensures that the nation's internal revenue laws are fairly and uniformly applied and that the public complies with the nation's tax laws. The most significant result of the Division's efforts is obtained every time the Federal Treasury collects a tax that has been correctly and justly imposed and every time it avoids making an erroneous refund. In this way, the Tax Division's accomplishments contribute significantly and directly to efforts by the Administration and Congress to reduce the Federal budget deficit.

GOALS

1. To promote the fair, correct, and uniform enforcement of the Federal tax laws in the nation's trial and appellate courts;
2. To foster the public's voluntary compliance with the tax laws through vigorous criminal prosecution of individual and corporate taxpayers that violate Federal tax laws;
3. To enhance collection by the U.S. Treasury of tax debts;
4. To assist in the development of Federal tax policy by (i) analyzing proposed legislation that affects civil litigation, appeals, and criminal prosecutions arising under the Internal Revenue Code and (ii) maintaining high quality relationships with the Internal Revenue Service, the Department of the Treasury, and components within the Department of Justice, including the United States Attorneys' Offices; and
5. To manage the Division efficiently and effectively.

BASE PROGRAM DESCRIPTION:

Tax Division lawyers working in the Appellate Section litigate all Federal civil tax cases appealed to the United States courts of appeals and state appellate courts. They also draft pleadings and briefs filed by the Solicitor General in the United States Supreme Court and make recommendations to the Solicitor General regarding the advisability of filing: (i) appeals in civil tax cases where the Federal Government did not prevail before the district courts, the Court of Federal Claims, the Tax Court, and state courts; and (ii) petitions for certiorari in civil tax cases where the Federal Government did not prevail in an appellate forum. In addition, attorneys in this section handle appeals generated in Freedom of Information Act and Privacy Act cases, civil tort suits that involve IRS officials and employees, and cases involving inter-Governmental immunity. They prepare *amicus curiae* briefs filed by the United States in private lawsuits that present issues affecting the interests of the IRS and in other cases where a court invites the Government to state its views on civil tax-related questions.

Case examples illustrate in substantive and tangible terms the nature of the work, its specific and general deterrent value, and its effects on revenues. In each of the cases described below, attorneys from the Tax Division's Appellate Section played a critical role by briefing and/or arguing civil tax issues that have a significant impact on the public fisc:

Specific Deterrence

- In *Chevron U.S.A. Inc. v. United States*, the Fifth Circuit denied taxpayer's claim for a refund of \$72 million (plus interest) in windfall profit taxes paid for 1984 and 1985. Specifically, in February 1996 the Court rejected taxpayer's contention that it could allocate a portion of the interest expense incurred by its parent (on debt incurred to finance the acquisition of Gulf Oil) to its cost of producing oil for the purpose of calculating the net-income limitation on windfall profit tax.
- In *Texas Farm Bureau v. United States*, the Fifth Circuit reversed the unfavorable judgment entered by the District Court on a jury verdict. The principal issue was whether payments received by Texas Farm Bureau, a tax-exempt organization, from two partially-owned insurance companies were tax-exempt royalties or were instead taxable compensation received for Texas Farm Bureau's promotion and sponsoring of the insurance companies to its membership. The court's decision in this case, holding that the payments were taxable, saved the Government approximately \$3.6 million.
- In *Allied-Signal, Inc. v. Commissioner*, the Third Circuit denied the taxpayer a deduction for \$8 million paid in 1977 to the Virginia Environmental Endowment Fund. The taxpayer claimed the \$8 million was deductible as an ordinary and necessary business expense, rather than a nondeductible "fine or similar penalty" under IRC Section 162(f).

General Deterrence

- In *American Mutual Life Insurance Co. v. United States*, where an industry-wide issue of first impression with approximately \$4 billion in revenue through the end of 1993 was at stake, the Eighth Circuit endorsed the Government's interpretation of the method used to determine the taxation of mutual life insurance companies under Section 809 of the Internal Revenue Code. Section 809, which was enacted as part of the Deficit Reduction Act of 1984, reduces the deductions available to mutual companies from the

payment of dividends to their policyholders through a complicated formula that involves a comparison between the earnings rates of the stock and mutual life insurance companies.

- In *National Commodity and Barter Association v. United States*, the plaintiff sought to recover over \$2 million applied against civil tax penalties assessed against it for failing to file partnership returns and promoting abusive tax shelter plans. NCBA is an organization headquartered in Colorado that sold a manual for conducting frivolous tax protest litigation and operated a "warehouse bank" that kept no records of the customers' banking transactions. In November 1994, the Tenth Circuit dismissed this tax refund suit and in October 1995 the Supreme Court denied the plaintiff's petition for review.

- In *United States v. Marc D. Blackman, et al.* (9th Cir. 1995), the Court of Appeals upheld enforcement of an IRS summons. In this case, a law firm filed incomplete IRS Forms 8300 indicating that it had received cash payments of more than \$10,000 from clients, but failed to disclose identifying information regarding the transactions, as required by Section 60501. The Court of Appeals sustained the district court's ruling that the IRS was not required to follow the "John Doe" summons procedures in serving its summons, based on its determination that it was conducting a legitimate investigation of the law firm's compliance with the law. The court further concluded that the district court did not err in finding that the attorney failed to establish that disclosure of the identities of his clients would be tantamount to revealing a confidential communication protected by the attorney-client privilege, and that the attorney could not rely upon his own privilege against self-incrimination to avoid producing records belonging to the law firm. The Ninth Circuit denied the defendant's request for a rehearing en banc, and in June 1996 the attorney filed a Petition for a Writ of Certiorari in the Supreme Court. Recently, in *United States v. Nancy Gertner, et al.*, the First Circuit affirmed a district court's finding that the Government was required to comply with the "John Doe" summons procedures in seeking client-identifying information with respect to cash payments made to a law firm. Enforcement of the cash reporting requirements contained in Section 60501 is a matter of great importance to the IRS, and the Division continues to litigate to clarify the law in this area.

NAME OF DECISION UNIT: Federal Appeals		PERFORMANCE TARGETS AND ACTUAL RESULTS					
PERFORMANCE INDICATOR INFORMATION							
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target
Predictability/ Efficiency	6. A. Number of appeal recommendations, and settlement, certiorari, venue, rehearing, confession of error, mandamus, and amicus participation memoranda prepared per attorney work year	9.3 (477/51.1)	8.2 (400/49)	---	8.0 (398/49.8)	---	---
	D. Number of briefs, reply briefs, petitions for rehearing etc., filed per line attorney work year	18.7 (750/40.1)	19.0 (723/38)	---	14.8 (576/38.8)	---	---

<p>A. Definitions of Terms or Explanations for Indicators:</p> <p>These performance indicators reflect the general goals of the Tax Division's Appellate Section. Because the bulk of the work consists of representing the Government in tax appeals, performance measures #4 and #5 are indicators of our success in protecting the revenue, in achieving fair results, and in preserving our reputation for just and effective advocacy in the courts.</p>	<p>B. Factors Affecting FY 96 Program Performance.</p> <p>Performance Indicator #1 sets forth the number of cases received by the Appellate Section from the various trial courts - 791 cases were received during FY 1996. Performance Indicator #2 lists the number of cases in which the courts of appeals heard oral argument, typically the most difficult cases handled by the Appellate Section. Oral argument was heard in 257 cases in FY 1996. Performance Indicator #3 lists the number of substantive motions and responses and oppositions thereto, and jurisdictional memoranda filed by Appellate Section attorneys - 103 such pleadings were filed during FY 1996. Performance Indicators #4 and #5 report the Appellate Section's winning percentage in taxpayer and Government appeals. The lower percentage of wins for Government appeals reflects the fact that such appeals are of cases where the Government did not prevail in the lower courts. The Appellate Section was victorious in 92 percent of its taxpayer appeals and 67 percent of its Government appeals in FY 1996. Performance Indicator #6A sets forth the number of appeal recommendations, and settlement, certiorari, venue, etc. memoranda prepared per attorney work year. Similarly, Performance Indicator #6B lists the number of briefs filed per line attorney work year - 398 appeal recommendations and memoranda were prepared during FY 1996, and 576 briefs were filed during the same period. Factors that affect the workload of the Appellate Section include IRS administrative actions, such as litigation referrals; the type and amount of civil and appellate litigation brought by taxpayers and others under the Internal Revenue Code; and the enactment of legislation affecting tax laws and the litigation arising under these laws.</p>	<p>C. Factors Affecting Selection of FY 97 and 98 Targets.</p> <p>The Tax Division is in the process of redesigning its case management system. By FY 1998, it is anticipated that all Federal Appeals statistics will be automated. A refined measurement system may cause some variation in the way some statistics are calculated.</p> <p>Targets and estimates are omitted because they may be viewed as setting numeric goals which are not consistent with the Tax Division's mission and the goal of just and fair treatment of taxpayers.</p>

CRIMINAL PROSECUTION

	Positions	FTE	Amount
1997 Appropriation Enacted	118	114	\$13,080
1998 Base	122	118	13,504
1998 Estimate	126	120	\$13,735
Increase/Decrease	4	2	\$ 231

BASE PROGRAM DESCRIPTION:

Attorneys in the Tax Division's four Criminal Enforcement Sections investigate and prosecute individuals, corporations, nonprofit organizations, and other taxpayers that attempt to commit tax evasion, willfully fail to file tax returns, file false tax returns, and otherwise intentionally attempt to evade their obligations under the Federal tax laws. They also investigate and prosecute tax violations occurring in the context of other criminal conduct such as financial institution fraud, narcotics trafficking, bankruptcy fraud, health care fraud, organized crime, public corruption, motor fuels and other excise tax fraud, and domestic and international tax conspiracies. The Division seeks to promote a balanced program of criminal tax enforcement by investigating criminal conduct nationwide in a variety of industry and occupational market segments.

The Criminal Enforcement Sections receive IRS requests to initiate grand jury investigations and requests to prosecute taxpayers identified by the IRS as a result of its own administrative investigations. Tax Division prosecutors review and screen these referrals to ensure that uniform standards of prosecution are employed and that all criminal tax violations warranting prosecution are, in fact, prosecuted. This review of criminal tax cases by Criminal Enforcement attorneys contributes to the high overall quality of criminal tax prosecutions and results in better than a 95 percent conviction rate, both of which are essential to deterring taxpayer fraud. After the Tax Division authorizes tax charges that can be brought against a taxpayer, prosecutions are handled either by the U.S. Attorneys, or in complex and significant cases (or cases in which the U.S. Attorney requests assistance), by Tax Division Criminal Enforcement attorneys. Tax Division attorneys also provide legal advice to the U.S. Attorneys' Offices on a wide range of issues.

In 1995, the Tax Division launched an initiative to increase the number of legal source income tax cases prosecuted by the Government. These cases constitute the core of the Tax Division's criminal prosecution mission and because they can involve tedious issues of law and complex methods of proof, such as net worth and bank deposits, demonstrate well the special skills that Tax Division prosecutors bring to the effort to stem white collar crime. The objectives of this initiative include (1) increasing the identification, investigation, and prosecution of legal source income tax prosecutions brought each year; (2) developing a systematic approach for handling criminal prosecutions of organized tax protester groups and to provide training so that these prosecutions are handled efficiently and effectively; (3) coordinating efforts by the Justice Department, including U.S. Attorneys, and the Criminal Investigation (CID) and Examination Divisions of the IRS on traditional tax cases, *i.e.*, cases that will reduce the growing tax gap; (4) reducing the number of pending legal source income tax cases in U.S. Attorneys' Offices; and (5) supporting efforts by IRS Divisions (Examination, Collection, and Criminal Investigation) to improve the quality and quantity of case referrals that IRS revenue agents make to criminal investigators.

Briefly, the voluntary income tax system loses billions of dollars annually in uncollected tax revenues, *i.e.*, the "tax gap." The imperative to close the gap is self-evident. In order to close this gap and increase revenues, the IRS and the Justice Department have launched an effort to reinvigorate the Government's tax enforcement program.

- The annual legal income source tax gap stands at approximately \$120-170 billion.
- In 1993, there were more than ten million nonfilers.
- The number of "pure" tax prosecutions -- those without other crimes charged -- has actually declined over the last five years.

The public's confidence in the fairness and integrity of the income tax system is critical if the Government is to retain its ability to fund its operations through a voluntary tax system.

Together, the Tax Division and the IRS have established a working group to supervise this initiative composed of the Tax Division's Deputy Assistant Attorney General (Criminal); the IRS Assistant Commissioner for Criminal Investigation; the Assistant Chief Counsel (Criminal Tax); and representatives of the Attorney General's Advisory Committee of United States Attorneys. CID has reported that it is committed to increasing the amount of direct investigative time devoted to legal source income Tax Gap cases by two percent each year. The Tax Division projects that by the end of FY 1996, the number of administratively-investigated cases involving legal sources of income

will be over 25 percent higher than FY 1995.¹ When receipts of other kinds of administratively-investigated cases important to criminal tax enforcement, such as electronic filing fraud and tax protester cases, are included the increase is almost 40 percent higher than FY 1995. The increase in these cases reverses a 15-year decline. Even with respect to grand jury cases referred by the IRS, the Tax Division projects the number of legal source and other priority areas will increase by approximately 22 percent in FY 1996. While most Tax Gap cases may not generate significant national media attention, these prosecutions receive front page newspaper coverage in local communities across the country and serve to remind ordinary taxpayers of the terrible price paid by those who choose to cheat on their taxes. These are the cases where maximum deterrence occurs.

Following are several illustrations of the recent accomplishments of the Tax Division's Criminal Enforcement attorneys. Examples are drawn from cases that comprise the Division's core criminal prosecutorial mission, *i.e.*, Tax Gap project cases where the tax crime involves income from a legal source -- such as the bank president who engages in self-dealing, the restaurateur who skims from the cash register, or the doctor who keeps two sets of bookkeeping records; tax protester prosecutions; and cases where the source of the tax charges arises out of conduct that was otherwise criminal, *i.e.*, illegal source income prosecutions. Also highlighted is the participation by Tax Division prosecutors in international tax treaty matters that permit the Department to have access to evidence in foreign jurisdictions of tax and other financial crimes.

Tax Gap Cases: Legal Source Income Prosecutions

- In *United States v. Arthur and Juanita Mallard* (S.D. Ala.), the jury convicted both defendants in connection with their business, which manufactured and distributed various "beauty aids" including "Baby Don't Be Bald" (which supposedly causes hair to grow) and "Reetn-A Anti-wrinkle Cream." Since the Mallards claimed that these products affect the structure of the human body, they are classified as drugs that require FDA approval before being introduced into interstate commerce. The Mallards failed to pay taxes on their "cosmetics" business' income and placed real and personal property in the name of a church that Arthur incorporated, the Mount Triumph Baptist Church. After the IRS seized a church bank account, the Mallards transferred their real property to family members and other corporations that they controlled. They also stopped using their own bank accounts and had Mallard's sisters open accounts for his use. They also transferred ownership of their business and seven cars to Arthur's girlfriend, and to support the impression that the girlfriend

¹Administratively-investigated cases are those most likely to involve legal sources of income and therefore contribute most directly to reducing the Tax Gap

owned the business, the Mallards filed a 1991 tax return on which they claimed to be W-2 earners working for her. In 1991, the Mallards filed a bankruptcy petition naming the IRS as their only creditor. The petition also failed to list real and personal property that they owned or controlled. In July 1996, Arthur was convicted of bankruptcy fraud, evasion of payment, filing a false return, procuring a false return, mail fraud (2 counts), and placing unapproved drugs into interstate commerce with the intent to defraud (7 counts). (In addition to containing substances other than the drugs approved for the claimed uses (minoxidil and retin-A), some of their "cosmetics" were colored with house paint.) Juanita was convicted of bankruptcy fraud and evasion of payment. Following the jury's verdict, Arthur's bond was revoked and he was remanded to the county jail pending sentencing. Arthur faces a sentence of 108 - 135 months; Juanita faces a range of 70 - 87 months.

- In *United States v. Louis P. Jones* (D. Mass.), a former Tax Examining Assistant at the IRS Andover Service Center pled guilty to a two-count criminal information charging him with the unlawful receipt of compensation for the preparation of tax returns by an IRS employee and with aiding and assisting in the preparation of a false tax return. While employed at the IRS, Jones operated a return preparation business where he prepared returns for compensation and inflated certain Schedule A deductions for his clients. He attempted to conceal his return preparation activities from the IRS by failing to sign and complete the return preparer signature block on the tax forms. Sentencing will take place in Fall 1996.

- In *United States v. Lloyd and Stetly Sparks* (D. Nev.), both defendants pled guilty to conspiracy to defraud the United States by evading payroll and individual income taxes and filing false employment and individual income tax returns in connection with the operation of their businesses, Sparks Plastering and Drywall. In the indictment, the defendants were charged with attempted tax evasion for the years 1988 to 1991 for failing to disclose more than \$5 million in business receipts to their return preparers and the IRS and by evading payment of substantial employment taxes for the years 1989 through 1991. In addition, the defendants were charged with filing a false 1991 individual income tax return. Sentencing will take place in Fall 1996.

- In *United States v. Vern Odell Crawford* (W.D. Va.), the jury convicted the defendant of failing to file tax returns and obstructing the grand jury's investigation of his criminal tax conduct. Crawford owns a number of small stores in service stations. As of the time Crawford was first contacted in May 1992 by an IRS Special Agent, he had not filed a tax return since tax year 1983. Moreover, during the intervening years, Crawford told various financial institutions that his net worth increased by approximately \$300,000. When the grand jury began investigating Crawford, he backdated documents and intimidated witnesses. The jury convicted Crawford in April 1996; he will be sentenced in Fall 1996.

- In *United States v. Julius Klausner* (S.D.N.Y.), the jury convicted Klausner, a successful Scarsdale, New York, CPA and tax return preparer, of all counts contained in a 27 count indictment: four counts of attempted evasion of his individual income taxes for the years 1986 through 1989; four counts of failure to file his returns for the same years; and 19 counts of aiding and assisting the filing of fraudulent tax returns for his accounting clients. In recent years, Klausner had as many as 1,700 clients, many of whom were police officers and fire fighters. The returns he prepared for his clients included grossly inflated itemized deductions for charity and business expenses. Klausner also failed to file his own returns or pay his income taxes for the prosecution years, despite earning approximately \$700,000 during this period from his thriving accounting practice. During the years in question, Klausner paid little if any income taxes notwithstanding that he owed over \$180,000 to the Service. In July 1995, Klausner was sentenced to serve 33 months in prison and fined approximately \$124,000.

- In *United States v. Vincent Vertuccio* (E.D.N.Y.), the jury convicted Vertuccio of evading approximately \$530,000 in personal income taxes for the years 1988 through 1991 and filing false partnership returns for 1988 through 1990. Vertuccio is a part owner of American Paper Fibers Co., a waste recycling company in Brooklyn, New York. Between 1988 and 1990, he instructed a customer to pay American Paper Fibers Co. in checks under \$10,000. During that time, he structured \$1.5 million in cash transactions at a check cashing location in New Jersey. In 1991, he cashed \$350,000 in checks he wrote to various payees, forged their endorsements, and negotiated the checks at a check cashing location in Brooklyn. None of the cash was reported as gross receipts on the partnership tax returns of American Paper Fibers, nor was it reported as taxable income on Vertuccio's personal returns. In June 1995, Vertuccio was sentenced to serve 18 months in prison.

Tax Charges Arising from Illegal Source Income

- In the largest motor fuel excise tax fraud case brought to date -- involving over \$140 million in evaded taxes -- proceedings of earlier guilty pleas by four defendants, sealed to secure the safety of witnesses, were unsealed. As of August 1996, this brought to nine, the total number of defendants who have pled guilty in this case. The August 1995 indictment, in the case captioned *United States v. Daniel Enright, Igor Erlikh, Aaron Misulovin, Demetrios Karamanos, et al.* (D. N.J.), charged these nine defendants plus at least 14 others with conspiracy to defraud the United States, conspiracy to commit tax evasion, wire fraud, money laundering, interfering with commerce by threats, and other offenses. The defendants are charged with operating two wholesale fuel distributorships that resulted in evasion of more than \$133 million in federal fuel excise taxes and \$11 million in New Jersey state fuel taxes between January 1990 and

B-17

June 1993. Proceeds from their scheme were wire transferred between and among bank accounts in several states, and to overseas bank accounts in Switzerland, Aruba, Hungary, Greece, and Latvia.

- In another motor fuel excise tax evasion conspiracy, *United States v. Joseph Refsch, et al.* (E.D.N.Y.), 15 defendants pled guilty to an indictment that charged a conspiracy to evade \$34 million in gasoline excise taxes over a three-year period. As of September 1995, nine defendants had been sentenced to prison terms that ranged from 30 to 60 months. The defendants included members of the Colombo and Lucchese organized crime families and the so-called "Russian Mob."

- In *United States v. Bruce R. Burrell* (S.D. Fla.), Burrell pled guilty to charges of tax evasion, conspiracy, and Clean Air Act violations. Burrell and a co-defendant were charged in a 70-count indictment that also included charges of smuggling, obstruction of justice, witness tampering, and money laundering. The charges arose out of the defendants' participation in a Freon smuggling scheme. Freon (generically known as CFC-12 or dichlorodifluoromethane) is a refrigerant gas formerly used widely in automobile air conditioners. As part of an environmental phase-out of the gas in the United States, domestic sales of CFC-12 are subject to a large excise tax. The charges related to attempts by the defendants and their co-conspirators to smuggle Freon into the United States under a variety of fictitious nominee names for subsequent sale to domestic customers and avoid the excise tax. Sentencing will take place in early Fall 1996.

- In *United States v. John Brennick* (D. Mass.), the defendant operated a series of head injury treatment centers in Massachusetts, Pennsylvania, Delaware, and Maryland. Each was a sole proprietorship with its own Employer Identification Number, which Brennick obtained in violation of IRS regulations for the express purpose of dividing his payroll tax liabilities on the books of the IRS into many small amounts. In December 1995, Brennick was charged and convicted of nine counts of structuring, 19 counts of willful failure to account truthfully for and pay over his withholding taxes, and one count of corruptly endeavoring to impede and obstruct the IRS. The jury found that he used the IRS as a bank, taking the payroll taxes for his own use, and paying whenever he pleased. In 1992, for example, he reduced his payments dramatically and failed to pay more than \$1.4 million in withholding taxes for the second, third, and fourth quarter of the year (even though he paid \$10 million in withholding taxes for the year). After an IRS collection agent put him on a payment schedule, the defendant started to bounce checks, causing the IRS to place liens on his assets and resulting in the defendant's bankruptcy. While the defendant was not paying his payroll taxes, he was structuring millions of dollars in currency out of his business by having his employees cash multiple checks in amounts under \$10,000 and then having them return the cash to him. In fact, the defendant testified at his bankruptcy hearing that he wasted the cash gambling at casinos.

- In *United States v. J.W. Trapp, et al.* (E.D. Okla.), a jury convicted the former sheriff of Choctaw County, Oklahoma, of racketeering involving his solicitation and acceptance of bribes from local marijuana growers, methamphetamine dealers, gamblers, and bootleggers from 1988-1995 while in office. Trapp was indicted with four co-defendants in a 10 count indictment that charged a drug conspiracy, tax offenses, and related charges. Trapp was convicted following a jury trial. One defendant pled guilty to a tax felony, one defendant is a fugitive, and two other defendants pled guilty and cooperated with the Government. In a related case, *United States v. Jeff Pierce, et al.*, four defendants were indicted for a complex conspiracy -- that included substantive tax charges -- for operating a nightclub that was the setting for an extensive gambling operation, drug use, and illegal drinking. The defendants paid the sheriff in order to be able to operate the club without local law enforcement interference. The two investigations produced forfeitures in excess of \$1.2 million.

- The Tax Division played an instrumental role in preparing the indictment that was lodged against former CIA agent Aldrich Hazen Ames a/k/a Kolokol in *United States v. Aldrich Hazen Ames and Maria Del Rosario Casas Ames* (E.D. Va.). One of the Tax Division's senior prosecutors, who is also a CPA, worked closely with an IRS Special Agent to analyze the Ames' bank deposits and expenditures over a nine-year period. When it became clear that traditional methods of reconstructing income were unreliable because it could not be established that the deposits and expenditures were from taxable sources, our lawyer was able to match cash deposits and expenditures to meetings between Ames and the K.G.B., which established that the money was for services rendered and therefore was taxable. The completed investigation revealed that between 1985 a..d 1992, Aldrich Ames received about \$2.5 million from the K.G.B. for his espionage activities. Both Aldrich Ames and his wife pled guilty to tax and espionage charges.

International Tax Treaty Negotiations

In 1995, an interagency delegation jointly led by the State and Justice Departments, with participants from the Tax Division, the Criminal Division, and the IRS, met with representatives of the Luxembourg Government to negotiate a mutual legal assistance treaty (MLAT). As a result, Luxembourg, which currently provides no assistance for any type of fiscal fraud, has agreed to provide assistance, including access to bank records, for most U.S. tax crimes. This agreement sets the stage for concluding similar agreements with other European countries that are bank secrecy jurisdictions such as Austria, Ireland, and Switzerland. From December 1993 through September 1995, the Tax Division participated in negotiations with Luxembourg for a new proposed income tax treaty. As a result, Luxembourg has agreed to provide a broad range of admissible information, not currently available under the present tax treaty, for both civil and criminal tax matters, except for bank information. From 1994 through early 1996, the Tax Division participated in negotiations with Switzerland for a new proposed income tax treaty. As a result, Switzerland, has agreed to increase its information exchange under a new treaty,

including providing us with admissible bank information in most U.S. criminal tax matters. Throughout 1995 and 1996, the Tax Division participated in negotiations with Ireland for a new proposed income tax treaty. As a result, Ireland, which currently provides no information not already in the files of its tax authorities for any tax matter, has agreed to obtain and provide information -- including admissible bank records -- for all U.S. criminal tax offenses.

NAME OF DECISION UNIT: Criminal Prosecution							
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS					
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target	
Output/Activity	8. Rate of participation in miscellaneous activities (i.e., conduct criminal tax training for Assistant U.S. Attorneys, participate in task forces, advise on legislative proposals and amendments, publish Criminal Tax Manual and revisions, etc.)	Not Avail.	90%	100%	
Productivity/Efficiency	9. Average number of days to perform initial reviews of administrative and grand jury outgrowth cases	43	44	47	

<p>A. Definitions of Terms or Explanations for Indicators:</p>	<p>The centralized review and approval of all criminal tax prosecutions and the provision of litigation assistance to the United States Attorneys' Offices advances the goal of uniform enforcement. Prompt review of criminal referrals promotes the goal of achieving maximum deterrence and fosters voluntary compliance.</p> <p>The Tax Division currently defines legal source income cases as those where the source of the proposed criminal tax charges is income that is legally produced as distinguished from income earned as a result of illegal conduct. These legal source prosecutions potentially have the greatest deterrent effect for the general public.</p> <p>"Tax protester matters," as used by the Division in both criminal prosecutions and civil litigation, is defined as cases involving traditional illegal tax protester schemes such as claims that the income tax is unconstitutional, the taking of so-called "vows of poverty," and the harassment of IRS employees. The IRS uses the terminology "illegal" tax protesters to distinguish individuals who declare themselves to be "tax protesters" outside the revenue system and who commit tax crimes from those individuals who are merely exercising their First Amendment rights to oppose tax policies while otherwise obeying the tax laws. Criminal prosecutions arising out of tax protester activity is a subset of the legal source income prosecutions.</p>
<p>B. Factors Affecting FY 96 Program Performance.</p>	<p>As of September 30, 1996, the Criminal Enforcement Sections have honored 149 of the 151 requests for litigation assistance at trial and appellate levels in legal source income cases (reference Performance Indicators #1 and #4); of the 32 requests for litigation assistance at trial and appellate levels in targeted enforcement areas, 31 of these requests have been honored, as of September 30, 1996 (reference Performance Indicators #2 and #5), and, our rate of participation in miscellaneous unit and inter governmental activities has matched the 63 requests received as of September 30, 1996, (reference Performance Indicators #3 and #6). The slight increase in the average number of days required to perform initial reviews of administrative and grand jury cases (Performance Indicator #9) is due in large part to the fact that the Criminal Enforcement Sections were operating below authorized strength for the year. The figure for requests received for litigation and investigation advice in tax protester matters (Performance Indicator #5) is probably below the actual number, as the tracking of this indicator did not begin until the fiscal year was well underway.</p>
<p>C. Factors Affecting Selection of FY 97 and 98 Targets.</p>	<p>The ability to meet goals depends to a large extent upon the number and types of cases recommended for prosecution; staffing levels, level of expertise, and fluctuating caseloads in the United States Attorneys' Offices and in the Tax Division's Criminal Enforcement Sections; IRS policies and initiatives affecting the complexity and volume of prosecution referrals; compliance of particular groups of taxpayers with the Internal Revenue Code, the volume of requests for comments and participation in miscellaneous activities, and the level of funding provided to the Division for personnel and other resources. The Tax Division is in the process of redesigning its case management system. By FY 1998, it is anticipated that all Criminal Enforcement statistics will be automated. A refined measurement system may cause some variation in the way some statistics are calculated.</p>
<p>Targets and estimates are omitted because they may be viewed as setting numeric goals which are not consistent with the Tax Division's mission and the goal of just and fair treatment of taxpayers.</p>

CIVIL LITIGATION

	Positions	FTE	Amount
1997 Appropriation Enacted	299	285	\$31,027
1998 Base	300	290	32,075
1998 Estimate	302	295	\$32,497
Increase/Decrease	9	5	\$ 422

BASE PROGRAM DESCRIPTION:

The attorneys in the Tax Division's seven Civil Trial Sections litigate suits filed by and against taxpayers in the district courts, the bankruptcy courts, the Court of Federal Claims, and the state courts. All of these suits relate to the enforcement of the tax laws. The broad range of litigation handled by the Division's Civil Trial attorneys includes tax refund suits challenging the IRS' determination of a taxpayer's federal income, employment, excise, and estate tax liabilities; bankruptcy litigation raising issues of the validity and priority of Federal tax claims and the feasibility of reorganization plans; actions to enforce IRS administrative summonses that seek information essential to determine and collect taxpayers' liabilities; suits to collect taxes and other monies often hidden by fraudulent conveyances, sham entities, and alter egos; suits against IRS and other Government officials for torts allegedly committed in connection with tax collection activities; tax protester suits of all varieties; suits against the IRS brought pursuant to the Freedom of Information and Privacy Acts; and State and local inter-Governmental tax immunity suits. In addition to handling litigation directly, Division Civil Trial attorneys frequently provide advice, training and other assistance to the many (Special) Assistant U.S. Attorneys handling the more routine civil tax cases.

The Division's Civil Litigation program represents its most comprehensive litigating function. Civil Trial attorneys support the IRS' general compliance activities and special audit programs by representing the Service in the courts. As part of this representation, civil trial attorneys independently review the Service's administrative determinations. They assure that taxpayers involved in trial level litigation are treated fairly and consistently nationwide. Cases handled by Civil Trial attorneys often govern thousands of cases pending administratively at the IRS and generate significant revenue for the Federal treasury. In 1996, the Tax Division collected over \$167 million, and

was successful in obtaining \$189 million in new judgments and settlements. Moreover, during the past year, Civil Trial attorneys also secured a number of major victories in the U.S. Bankruptcy Courts that should lead to significant revenue collections by the IRS, and successfully defended the United States against many refund suits brought by taxpayers, thereby retaining in the Federal Treasury \$363 million in revenues. Just as with its appellate and criminal prosecution functions, the Division's Civil Litigation program has both a direct impact on the taxpayer who is a party to the litigation and an indirect impact in promoting compliance with the tax laws. The case descriptions that follow, as well as many of those set forth in the section describing the Division's Federal Appeals program, illustrate the breadth of issues litigated by the Tax Division.

Direct Impact

- In *Unum Corp. v. United States* (D. Me.), plaintiffs sought to deduct as life insurance company policyholder dividends, under I.R.C. Section 808(a), the entire value of cash and stock, \$652 million, distributed to policyholders in the course of plaintiffs' conversion from a mutual company to a stock company. Ruling in favor of the United States on this issue of first impression, the district court denied the portion of the deduction at issue in the suit and refused to refund the approximately \$80 million in tax plus interest claimed. Because the ruling will result in complete denial of the deduction, the total tax impact of the case is estimated to be in the range of \$350 to \$450 million, including interest. In addition, the decision may impact on other life insurance companies, some of them larger than plaintiffs, which have converted in recent years from a mutual to a stock form of organization. The taxpayer has appealed.
- In *Carolina Power & Light v. United States* (E.D.N.C.), the Tax Division successfully tried to a jury an issue involving the "placed in service date" for depreciation purposes of a nuclear power plant. As a result, the taxpayer's claim for a refund of \$187 million was denied by the court. The taxpayer has filed an appeal.
- In *Chevron U.S.A., Inc. v. United States* (S.D. Tex.), the district court denied the taxpayer's claim for a refund of approximately \$71.7 million, plus interest, in windfall profit taxes on the extraction of domestic oil. The court rejected the taxpayer's attempt to categorize such items as interest expenses as allowable deductions attributable to the property and agreed with the Government that the taxpayer was attempting improperly to calculate the taxable income from its properties for windfall profit tax purposes on a consolidated basis with its parent. The case was affirmed on appeal.
- In *re Guyana Development Corporation* (Bankr. N.D. Tex.), is a Chapter 11 bankruptcy proceeding involving an IRS claim of \$38 million in which the Government obtained the appointment of a trustee by successfully asserting an alter ego/nominee theory against

the corporation's president. The Government has received \$25.5 million through the bankruptcy proceedings and successfully defended an IRS pre-filing seizure of \$5 million. The Tax Division expects to collect an additional \$5.3 million of the IRS' claim in connection with this proceeding.

- *In re Nelson Bunker Hunt and In re William Herbert Hunt* (Bankr. N.D. Tex.) are two separate Chapter 11 bankruptcy proceedings filed by the Hunt brothers of Texas in 1988. They are believed to have been the largest individual bankruptcies in the history of the United States. Liquidating plans, confirmed in December of 1989, provided that the Government receive 80 percent of the proceeds of Bunker Hunt's liquidation and 70 percent of the proceeds of Herbert Hunt's liquidation. As a result of a number of post-petition disputes -- the last of which was only resolved in May 1995 -- the Tax Division has continued to be actively involved in the liquidations. The liquidations, which as of June 1996, have resulted in collections of more than \$79.3 million and \$39.4 million in satisfaction of Bunker and Herbert Hunt's tax debts, respectively, are expected to yield approximately \$6 million more over the next two years.

- *In United States of America v. K. T. Derr, Chairman of Chevron Corporation, and Chevron Corporation* (N.D. Cal.), Chevron paid approximately \$650 million in settlement of almost all of the issues that had arisen in nine years of tax disputes with the IRS. Among the tax issues that were contested were liabilities for intercompany interest, services and transfer pricing, offshore insurance operations, European refining and marketing operations. An additional contested tax liability arose in connection with crude oil purchased at below-market prices by Chevron from Saudi Arabia, that in turn set limits on Chevron's resale prices. This case, one of the most significant tax cases litigated by the Justice Department, was worked jointly by the Tax Division and the United States Attorney's Office for the Northern District of California.

- *In re I.C.H. Corporation* (Bankr. N.D. Tex.), the trial section succeeded in collecting \$71.6 million from the debtor, a holding company for a number of insurance companies domiciled in different states including Texas, Pennsylvania, Illinois, Kentucky, and Missouri.

Indirect Impact

- In *Blackfeet National Bank, et al. v. Rubin* (D.D.C.), the court rebuffed an attempt by two national banks to force the Secretary of the Treasury to withdraw a proposed regulation. The banks claimed that the regulation would severely restrict their ability to market a financial product known as a "retirement CD." The court adopted the argument advanced by the trial section that the banks

should use the "notice and comment" phase of the rulemaking process rather than expect judicial review of a regulation that may not be effectuated. The case was affirmed on appeal.

- In another case of industry-wide importance, *Beneficial National Bank and Beneficial Tax Masters v. Commissioner* (D. Del.), the plaintiffs filed a complaint against the IRS seeking a temporary restraining order (TRO) and a preliminary injunction to prevent the IRS from splitting the payment of tax refunds between Beneficial and taxpayers who receive refunds as a result of claiming the earned income tax credit ("EITC") available to low income taxpayers. Beneficial sued in its capacity as a leading maker of refund anticipation loans ("RALs"), i.e., loans secured by anticipated refunds made to taxpayers who file their returns electronically. After the Court denied the motion for a TRO, ordered discovery and set a hearing date, and after the Tax Division -- as counsel to the IRS -- produced documents, deposed Beneficial's officers and employees, and defended depositions of various IRS employees, Beneficial announced that it was withdrawing its suit. Beneficial appears to have been convinced that it would not prevail on the merits.

- In *United States v. Norwest Corp.* (D. Minn.), the United States asked the Court to enforce a summons issued by the IRS to obtain software used by the taxpayer for the preparation of its consolidated income tax returns. In this case of significant administrative importance to the IRS, the court ruled that the IRS was entitled to the software while imposing certain conditions on its use and subsequent return.

- In *British Car Auctions, Inc. v. United States* (Fed. Cl.), the court upheld the validity of regulations promulgated by the IRS that implemented the "dual resident corporation" provision of the Tax Return Act of 1986. This case involves approximately \$4 million and the legal issue is significant for most multinational corporations.

- In *In re Spiritio* (Bankr. M.D. Fla.), the Bankruptcy Court held that the debtors' income tax liabilities for 1989, 1990, and 1991 were not dischargeable because of their willful attempts to evade or defeat the tax. The debtors were active participants in the tax protest organization known as "The Pilot Connection Society" and engaged in typical tax protester activity.² This case is one of many in which the Division has prevailed in its efforts to deny dischargeability to debtors who willfully attempt to evade their tax liabilities. The debtors have appealed.

² See also *United States v. Marsh, et al.*, discussed as part of the Tax Division's request for a program increase.

- In *Clifford V. Stanley v. United States* (D. Col.), a refund suit brought by retired members of the Denver Police and Fire Department, the plaintiffs sought to exclude their pensions from taxation as "workers compensation," pursuant to I.R.C. § 104(a)(1). The plaintiffs, all of whom had retired after meeting the normal age-and-service requirements, obtained from their respective pension boards determinations that they were disabled as a result of injuries that had occurred between six and 24 years prior to their retirements. The court denied the refunds. Several hundred other retired police officers and fire fighters have made similar refund claims. Taxpayers have filed a notice of appeal.
- In *Schuler Industries, Inc. v. United States* (Fed. Cl.), the court upheld the validity of regulations promulgated by the IRS implementing the alternative minimum tax ("AMT") provisions of the Tax Return Act of 1986, which provide that taxpayers may not deduct employee stock option program ("ESOP") dividends paid in computing a component of their AMT income. The taxpayer has filed an appeal.
- In *United States v. Kjellstrom* (W.D. Wis.), the court awarded summary judgment for the Government in the first case to constitute a transition rule exception to the repeal of the investment tax credit for certain property used in a taxpayers' "world headquarters." The court concluded that the transition rule should be narrowly construed so as to apply to the intended beneficiary of the rule and at most a small group of similarly situated taxpayers. The transition rule is the subject of a number of pending cases in the Tax Court and at the administrative level of the IRS involving tens of millions of dollars. The decision was affirmed on appeal.

CON 1/1/98 12:00:11 PM

<p>A. Definitions of Terms or Explanations for Indicators:</p>	<p>The civil litigation program promotes the protection of tax revenues while striving to assure the fair and consistent treatment of taxpayers nationwide. Performance Indicators #13 and #14 reflect the direct impact of civil litigation on the U.S. Treasury insofar as the Division currently measures it. Performance Indicator #13 shows substantial tax revenues collected as a direct result of civil litigation. Performance Indicator #14 measures the amount of tax dollars saved in tax refund suits, as expressed in terms of the amounts of tax and interest sought by the complaint. The savings shown does not include the additional statutory interest for which the United States would have been liable had it lost. While the Division does not measure the indirect influence of its civil litigation on the collection of revenues by the IRS, many cases described elsewhere in the Division's budget submission suggest the impact is considerable. Reporting decisions on cases in Bankruptcy Court, District Court, Court of Federal Claims, State and Local Courts (Performance Indicators #4 and #6) provides a detailed basis for judging whether the positions taken in litigation by the Division are consistently reasonable. The fair and uniform treatment of taxpayers is also reflected in the numbers of concessions and settlements of issues and cases (Performance Indicators #5 and #7) and in matters where the Division declines to bring suit because it determines litigation is not warranted (Performance Indicator #9). Beyond the need to be responsive to client agencies (which is measured in part by Performance Indicator #8), the Division values efficiency in its civil litigation because it recognizes that the correct and fair result has more value if it can be achieved efficiently and expeditiously. A comparison of Performance Indicators #4 and #6 to Performance Indicators #5 and #7 gives some rough sense of the many issues that are resolved voluntarily, without judicial intervention, although there are, in addition, many bankruptcy matters which the Division resolves by stipulation. Performance Indicators #4, #6 and #15 attempt to convey the complexity of civil cases. One case often includes multiple issues and multiple parties. Thus, the number of litigation activities reflects attorney productivity more accurately than caseload numbers. Performance Indicators #1, #12, #13, and #16 provide a base against which to examine the Division's productivity, and its part in achieving efficient, expeditious justice. Performance Indicators #2, #3, #10, and #11 describe important elements of the civil program's tax protestor initiative.</p>
<p>B. Factors Affecting FY 96 Program.</p>	<p>The Tax Division is in the process of redesigning its automated case management system. By FY 1998, it is anticipated that all litigation statistics will be automated and refined. A refined measurement system may cause some variation in the way some statistics are calculated.</p> <p>On 10/12/95, the Division implemented a policy change whereby miscellaneous bankruptcy matters where the Department has not yet been asked to provide representation to the IRS are no longer entered and tracked on the Division's automated case management system. During FY 95, the Division received more than 30,000 of these matters. This policy was changed as an efficiency measure to shift more data technician resources to improving overall data quality and to shift more paralegal resources to the direct support of litigation.</p> <p>The reported outcomes reflect positively on the civil litigation program's productivity and debt collection and other revenue enhancement efforts. Many outside factors affect these outcomes, however, among them the lack of control over the number, types, significance, and complexity of its case receipts, which are dependent on such matters as the changing tax laws and the level of funding provided to the IRS for personnel and taxpayer compliance initiatives; the responsiveness of its client agencies; the strategies of opposing counsel; the procedures of and burdens on the courts; and the collectibility of taxpayers' debts. In addition, productivity and quality are greatly affected by the resources available for civil litigation.</p>
<p>C. Factors Affecting Selection of FY 97 and 98 Targets.</p>	<p>Targets are omitted because they may be viewed as setting numeric goals which are not consistent with the Tax Division's mission and the goal of just and fair treatment of taxpayers.</p>

Increase/Decrease

BASE PROGRAM DESCRIPTION:

The Assistant Attorney General, the Executive Office staff, and the Legislation, Policy & Management Analysis Unit of the Tax Division provide leadership, policy guidance and direction, and administrative support to all components of the Tax Division. The Division's executive leadership establishes appropriate and uniform policies involving appeals and civil and criminal tax enforcement, and promotes and maintains communications with the IRS, the Treasury Department, the Office of Management and Budget, the United States Attorneys' Offices, other components of the Department of Justice, and the public. The personnel in the Legislation, Policy & Management Analysis Unit review and analyze legislative proposals that directly affect the litigating mission of the Tax Division, prepare all legislative reports required by the Congress, the Office of Management and Budget, and the Department of Justice, and coordinate the Division's activities pursuant to the Government Performance and Results Act (GPRA). Timely responses also are prepared to satisfy the requirements of the Freedom of Information and Privacy Acts.

The Office of Administration provides services relating to general administration, fiscal/budgetary controls, automated information systems technology support, personnel, and other administrative matters as required. It consists of three components: (i) the Executive Office, which provides overall control and policy guidance; (ii) the Administrative Services Staff, which is responsible for accounting and financial services, budget planning and evaluation, personnel services (including providing administrative support for the recruitment and hiring of Division personnel), case records and file management, procurement, and facilities management; and (iii) the Information Management Staff, which is responsible for managing and maintaining the EAGLE office automation network and for providing all other

information systems technology support required by Tax Division employees, litigation support services, a personal computer resource center, and a post-litigation operation that tracks and monitors the Division's debt collection operations.

The Tax Division's senior management remains committed to maintaining and enhancing the standards of excellence that have been the hallmark of the Division since its inception. This commitment has resulted in improved internal management controls, better budget development and execution, enhanced office automation, and successful programs to improve employee training.

As part of pursuing the Tax Division's primary mission -- promoting the uniform and equitable enforcement of the nation's tax laws -- the Division's litigation managers (section chiefs) have fostered heightened cooperation with the United States Attorneys and the Internal Revenue Service. The Section Chiefs regularly meet with representatives from these other offices to develop and coordinate law enforcement initiatives and to discuss other matters of mutual concern. For example, the four chiefs of the Criminal Enforcement Sections participated in a meeting of IRS Criminal Investigation managers to explore workload priorities and trends. A byproduct of this development has been more participation by Tax Division line attorneys in the policy discussions and litigation efforts of cooperative law enforcement efforts, such as joint IRS/FBI investigations of motor fuel excise tax evasion, the Department of Transportation/Federal Highway Administration Joint Federal/State Motor Fuels Compliance Project, the Treasury Department's Tax Refund Fraud Task Force, various health care fraud task forces, the Organized Crime Drug Enforcement Task Forces (OCDETF), and the Bank Fraud Task Forces established to respond to litigation resulting from the savings and loan crisis. On the administrative side, the Tax Division also has benefited from its relationship with the IRS by meeting with the Service's financial management executives, exploring how the Service has employed activity-based cost management techniques, and exploring the feasibility of testing such a system in a litigation environment.

The Tax Division's executive, legislative, and policy personnel have participated in drafting the Division's position on a variety of issues related to the Department's and Division's operations. Thus, for example, the Assistant Attorney General has established a Performance Management Committee composed of staff, line attorneys, and managers to develop and implement the Division's response to the obligations imposed by GPRA. She also regularly meets with a Line Attorneys' Committee, composed of one elected representative from each of the legal sections in the Division, and with another committee of secretaries and technical personnel. Among the issues that have been addressed by these committees and in writings and policy discussions have been: the appropriate ratio between attorneys and support staff; the increased use of para-professionals; the use of administrative leave for *pro bono* work performed by attorneys and support staff; and the taxation of travel expense reimbursements received by Department attorneys on long-term job-related assignments.

On the legal side, the Assistant Attorney General has sought broad input on many issues including proposed asset forfeiture legislation and guidelines for searching and seizing computers. The Tax Division also has been exploring the potential applicability of Alternative Dispute Resolution mechanisms to litigation matters. During the past year, the Division's Office of Training continued to offer top-rate educational opportunities to managers, attorneys, other professionals, and support personnel. The Training Office offers daily classes and videotaped sessions to enhance legal and technical skills. It also coordinates training mandated by the Department on such complex issues as sexual harassment sensitivity and AIDS awareness. The Office of Training provides the ethics and computer security training required by the Division of all its employees and continues to offer its successful individualized word processing training program.

In FY 1995 and 1996, the Tax Division's Office of Administration has continued its outstanding record of delivering services to other sections of the Division that have significantly enhanced the overall productivity of our legal workforce. The accomplishments include: (a) upgrading personal computers at every Division workstation; (b) developing a standard configuration for the personal computers that will allow personnel to use Windows or DOS in the current office automation environment; (c) implementing a system that allows attorneys to connect to the Division's office automation network and remotely access files and e-mail on the network while they are on the road; (d) developing communications protocols that allow Division attorneys to have direct electronic communications with IRS personnel; (e) developing an interface between Tax Division personnel and the Internet; (f) establishing video teleconferencing centers in headquarters and the Southwestern Civil Trial Section in Dallas, Texas; (g) providing litigation support to attorneys by organizing case-related documents; (h) implementing an automated procurement system to issue purchase orders, track requisitions, and permit certification of funds availability; (i) coordinating with Department officials on office space requirements during the planned renovation of the Main Justice Building; and (j) coordinating the renovation of the Division's records management space. Each of these achievements allowed the Division to weather tight budget times and contributed significantly to the Division's successes over the last year.

In FY 1996, the Tax Division launched a Restructuring Project with the goal of realigning job responsibilities within the Division so that tasks would be handled by the most appropriate employees. The Division's view has been that through training and teamwork, it could (a) provide more challenging work for its non-legal staff, which ultimately will prepare them for career enhancement opportunities; and (ii) provide its attorneys with more administrative and paralegal support so that they can give greater time and attention to the factual and legal issues presented by their cases. The Division has now completed the analysis and design phases of the project and is starting implementation. Once the initiative is fully implemented, the Division will make greater use of paralegal and related litigation support positions and eliminate some unneeded administrative and clerical positions. Thus, the FY 1997 workyears represent a bridge between the Division's traditional workforce and the workforce that will be in place when the Restructuring initiative is fully implemented.

TAX PROTESTER INITIATIVE¹

	Positions	FTE	Amount
Criminal Prosecution	4	2	\$231
Civil Litigation	4	2	231
Total Increase	8	4	\$462

GOALS:

The Tax Protester Initiative has the following objectives:

1. To develop a systematic approach for handling criminal prosecutions of organized tax protester groups;
2. To develop a systematic approach for handling defensive civil litigation brought against the Government by tax protester organizations and individuals who identify themselves as associated with the tax protester movement;
3. To develop new strategies, including affirmative litigation, that will deter tax protester activities;

¹"Tax protester matters," as used by the Division in both criminal prosecutions and civil litigation, is defined as cases involving traditional illegal tax protester schemes such as claims that the income tax is unconstitutional, the taking of so-called "oaths of poverty," and the harassment of IRS employees. The IRS uses the terminology "illegal" tax protesters to distinguish individuals who declare themselves to be "tax protesters" outside the revenue system and who commit tax crimes from those individuals who are merely exercising their First Amendment rights to oppose tax policies while otherwise obeying the tax laws. Criminal prosecutions arising out of tax protester activity is a subset of the legal source income prosecutions discussed as part of the Tax Gap Project of the Tax Division's Criminal Enforcement Sections, *supra*.

4. To develop systems for sharing and readily accessing the body of knowledge developed by the IRS and the Tax Division as a result of many years of litigation with tax protesters, e.g., correspondence, sample pleadings, jury instructions, brief banks, and
5. To provide training to Assistant United States Attorneys and IRS personnel so that criminal prosecutions of tax protesters and civil tax protester litigation are handled efficiently and effectively.

PROGRAM DESCRIPTION:

Over the last year, the number of criminal tax and non-tax investigations, prosecutions, and civil actions arising out of tax protester activity has been growing steadily. For example, at first glance there might appear to be no direct link between tax protester activity and terrorism, however the experience of the IRS and the Tax Division is that many of the individuals associated with the type of violent domestic militia, which have become the focus of public attention since the bombing in Oklahoma City, also espouse tax protester rhetoric and some have a history of making violent threats against the IRS.⁴ One of the latest tactics used by tax protesters and other anti-Government individuals involves efforts to negotiate bogus financial instruments and collect on judgments rendered by so-called "common law courts." To date, the Division has handled tax protester matters on a case-by-case basis by assigning them to attorneys in the relevant criminal enforcement and civil trial sections with geographic responsibility. On May 21, 1996, the Assistant Attorney General announced the appointment of two special counsel -- one from a Civil Trial Section and one from a Criminal Enforcement Section -- charged with taking steps to concentrate our experience and capitalize on the Division's extensive body of knowledge in this area.

Between now and October 1997, these two senior trial attorneys will be responsible for designing the specific activities that will comprise this initiative and coordinating and compiling the information we have accumulated over the years. They also will advise and assist civil trial lawyers and prosecutors in the Tax Division and the United States Attorneys' Offices, as well as IRS personnel involved in tax protester cases, as the need arises. As this initiative becomes known in the Department, the Division expects to receive a

⁴See, e.g., "Militias are Joining Jury-Power Activists to Fight Government: Tax Protesters, Survivalist Benefit from Message Jurors Can Ignore Law," *Wall Street Journal*, May 25, 1995, at A1. Moreover, according to data provided by the Treasury Department, in FY 1994 there were 580 investigations of threats and assaults against IRS employees. The IRS Inspections Division provided 99 armed protective escorts for IRS employees and CID expended 2,800 staff days for protective escorts.

substantial increase in the number of requests for assistance with these matters. Accordingly, the Tax Division is requesting a program increase of eight positions (four permanent attorney positions and four para-professional positions), four FTE (two attorney and two support personnel) and \$462,000 to handle the influx of criminal and civil tax protester cases. One half of the requested initiative will be devoted to criminal prosecution activities; the other half will be used in connection with civil litigation. The full year costs in 1999 will be \$774,000.

In the mid-1980s, the number of IRS investigations of tax protesters affiliated with organized groups started to increase. This trend appeared to peak in FY 1991, and subsequently the number of new investigations initiated by CID started to decline. In the last year, however, the Service's open inventory of these cases has started to increase again and there is every reason to believe that this is not an anomaly. At the end of FY 1994, CID had approximately 160 of these cases in inventory, almost one-third of which were related to what has been called the largest tax protester organization in the history of the United States, "The Pilot Connection Society" in Northern California and the Pacific Northwest. Estimates place the tax losses sustained by the Federal Treasury that are attributable to TPCS at almost \$100 million. The balance, approximately 104 cases, come primarily from the West Coast and Midwest regions and involve such diverse activity as: filing blank IRS Forms 1040/1040A; establishing Foreign Trust Organizations; filing IRS Forms W-4 that include excessive overstatements of withholding allowances; and nonfiling and nonpayment. As of the end of the second quarter of FY 1996, CID's cumulative inventory was already 147 cases, even after many of the Pilot Connection Society cases have already been referred to the Justice Department or otherwise resolved. Another measure of the increased activity in this area is the amount of time special agents devote to enforcement efforts in this area which as of the end of the second quarter of FY 1996 had increased 21 percent over the same period of time in FY 1995.

The "common law court" movement is the latest refuge for tax protesters and other anti-Government individuals. Organized and individual tax protesters have attempted to harass Government officials, including judges, by filing common-law liens against anyone involved with their tax disputes. The baseless writs, default judgments, indictments, and quiet title petitions mailed to Government officials by persons associated with the "common law courts" are the latest variation of this practice. Using documents purporting to have the force of law, these organizations appear to rely on the authority of "common law courts" to issue process directed at IRS employees. United States Attorneys, Judges, and law enforcement officers who have attempted to enforce federal and state law against the believers. Another tactic is to send false Forms 1099 to the IRS showing the payment of fictitious income to their "enemies." The use of pseudo-official court and other documents is designed to intimidate and deter law enforcement efforts. Tax Division trial attorneys have reported their "prosecution" in common law courts with concern that violence would follow. Indeed, on occasion tax protester filings have caused significant confusion leading attorneys and IRS persons alike to accord them the force of law.

Tax protester cases arising out of the conduct of individuals (rather than protester organizations) are particularly burdensome to the IRS and the Department. These cases often involve parallel civil and criminal proceedings,¹ the individual protesters are not usually in high income brackets, the tax loss as a result of protester conduct is usually lower than the average of prosecutions brought, proving willfulness can be a problem, and some of these cases lack jury appeal. Moreover, these cases are always extremely resource-intensive. The IRS finds protester cases difficult to work administratively and often seeks authority to conduct grand jury investigations. Once indicted, this type of defendant almost always refuses to plea bargain and goes to trial -- engaging in lengthy and tedious motions practice at every opportunity. In addition, the protesters frequently engage in frivolous civil litigation before and after their criminal trials. For example, in a number of cases protesters have contested IRS summonses during the investigative phase of the criminal case and have brought wrongful levy, quiet title, and *Bivens* actions after the criminal case. These are some of the reasons why United States Attorneys often ask the Tax Division to handle tax protester cases. The Tax Division has perfected the art of trying these cases to successful conclusions.

Following are several examples of tax protester cases tried recently by attorneys in the Civil Trial and Criminal Enforcement Sections of the Tax Division.

National Commodity and Barter Association Cases

- In *National Commodity and Barter Association v. United States*, 843 F. Supp. 655 (D. Colo. 1993), *aff'd*, 42 F.3d 1406 (unpublished disposition), 74 A.F.T.R. 2d (RIA) 94-7385, 1994 WL 664970 (10th Cir. 1994), *cert. denied*, 116 S. Ct. 52 (1995), the plaintiff sought to recover over \$2 million applied against civil tax penalties assessed against it for failing to file partnership returns and promoting abusive tax shelter plans. See also *United States v. Voss*, 82 F.3d 1521 (10th Cir. 1996) (affirming criminal contempt

¹For example, in addition to the criminal proceedings against James L. Noske and his co-defendants discussed in the case example below, the Tax Division has identified 50 cases in the federal and state courts arising out of the Noske's tax protest activities, 12 of which were heard by the Eighth Circuit Court of Appeals, 25 of which were heard in the United States District Courts, seven of which were in the Tax Court, and six of which were in state courts. Among the myriad causes of action stated were: injunction actions, actions to quiet title, fraudulent conveyance actions, wrongful levy actions, wrongful disclosure actions, *Bivens* suits (lost actions brought against the United States and individual Government employees for alleged violations of the Constitution), and IRC Sec. 6700 penalty actions. See, e.g., *Noske v. United States*, 998 F.2d 1018 (8th Cir. 1993) (unpublished; full-text opinion reported at 199 U.S. App. Lexis 17480); *BBCA Inc. (a/k/a God's Helping Hands) v. United States*, 954 F.2d 1429 (8th Cir.), *cert. denied*, 113 S. Ct. 192 (1993); *Xemas v. United States*, 689 F. Supp. 917 (D. Minn. 1988), *aff'd without published op.*, 889 F.2d 1091 (8th Cir. 1989), *cert. denied*, 494 U.S. 1027 (1990); *First American Bank of St. Cloud v. Noske*, Civ. No. CX-90-27 (Dist. Ct., Stearns Co., Minn.) (final order entered Feb. 1993).

convictions of the Director of NCBA and several members in connection with their tax protest activities). NCBA is an organization headquartered in Colorado that sold numerous materials and offered seminars advocating the non-filing of tax returns and showing how to conceal income and assets and conduct frivolous tax protest litigation. The NCBA operated a multi-million dollar nationwide network of "warehouse banks" that kept no records of the customers' banking transactions.⁴ In common with the Freeman of today, the NCBA contended that the federal reserve system was illegal. After a week-long trial the district court sustained the penalties. The Government's win was affirmed by the Tenth Circuit.

The Division is still handling a *Bivens* tort suit in Colorado against a number of IRS agents who were involved in investigating the NCBA in the 1980s. The suit has been to the Tenth Circuit twice and is now back in the district court on remand.

Common Law Liens

One regularly used tactic by tax protesters is the filing of so-called "common-law liens" against IRS agents, bankruptcy court judges, magistrate judges, federal district court judges, Assistant United States Attorneys, and Tax Division attorneys. A number of these cases have resulted in published opinions by the Federal District Courts and Courts of Appeals.

In one case, baseless "commercial liens" were filed against real and personal property owned by 16 federal Government employees who had been involved in IRS seizures of the property owned by the defendants. In response, the Tax Division brought a declaratory judgment action to expunge the liens and sought a permanent injunction against the defendants from filing any further documents purporting to create such encumbrances. In *United States v. Trowbridge*, 1993 WL 764338 (D. Idaho, Sept. 13, 1993), the district court adopted the Report and Recommendations of a magistrate who found that the liens were "frivolous tax protester devices used to harass Government employees" that "lack any legal effect." The magistrate observed that "tax protesters, while claiming to act in the interests of freedom and personal liberty, use this weapon to harass private individuals in their private lives, as part of the tax protester's campaign." *Id.* at *5. He also found that the "[d]efendants' claims to act in the interests of justice, 'truth,' or in protection of their Constitutional rights

⁴We have identified more than 90 civil and criminal cases in the federal courts dealing with the NCBA or individual taxpayers who used NCBA materials or warehouse banks in their illegal tax protest schemes. The warehouse banking scheme is detailed in *United States v. Hawley*, 855 F.2d 595 (8th Cir. 1988), *cert. denied*, 489 U.S. 1020 (1989); and *United States v. Stulen*, 661 F. Supp. 1092 (D. Minn. 1987), *aff'd*, 867 F.2d 446 (8th Cir. 1989), *cert. denied*, 493 U.S. 828 (1989). See also *United States v. Marsh* and *United States v. Rubel*, discussed *infra* (according to NCBA data, it appears that both defendants had some association with the NCBA).

to be totally without merit." *Id.* In order to protect Government employees from this type of harassment, the Tax Division frequently must file suits asking courts to declare these kinds of liens invalid, to expunge the liens, and to enjoin the filing of any additional liens.³

In addition, the Tax Division has prosecuted and convicted individuals on the theory that filing common-law liens constitutes a corrupt endeavor to impede and obstruct the due administration of the Internal Revenue Code in violation of 26 U.S.C. § 7212. *See, e.g., United States v. Reeves*, 752 F.2d 995 (5th Cir.), *cert. denied*, 474 U.S. 834 (1985), *appeal after remand*, 782 F.2d 1323 (5th Cir.) (per curiam), *cert. denied*, 479 U.S. 837 (1986); *United States v. MacElhain*, 858 F. Supp. 1096 (N.D. Ala. 1994), *aff'd*, 68 F.3d 486 (11th Cir. 1995) (civil suit to expunge liens after conviction for corruptly endeavoring to impede and obstruct the due administration of the Internal Revenue Code in violation of 26 U.S.C. § 7212).

Criminal Prosecutions

- In *United States v. Phillip Marsh, et al.* (N.D. Cal.), the founder of The Pilot Connection Society ("TPCS"), Phillip Marsh, was sentenced to 17½ years in prison. His wife, Marlene, a co-founder and marketing director of the organization, was sentenced to 14 years in prison. TPCS was the largest known tax protest organization in the country. In December 1995, following an eight-week

³*See, e.g., United States v. Rowen*, 52 F.3d 335 (Table), 75 A.F.T.R.2d 95-2102, 1995 WL 230345 (9th Cir. 1995) (affirming injunction and invalidation of common law liens and awarding sanctions because "an appeal from a removal of baseless liens against IRS employees is frivolous"); *United States v. Schenk*, 951 F.2d 1261, 1991 WL 274094 (10th Cir. 1991) (dismissing appeal for lack of jurisdiction where tax protester defendant refused to respond to district court order striking his purported answer as nonresponsive in an action brought for declaratory and injunctive relief); *United States v. Montgomery*, 778 F.2d 222, 224-225 (5th Cir. 1985) (affirming order to expunge \$1 million "common-law liens against IRS employees and charging a tax protester with attorney's fees where he "perjured in reiterating the time-worn arguments of those persons who are attempting to avoid their fair share of the costs of the Government that organizes the society in which they live"); *Reyn v. Bilby*, 764 F.2d 1325 (9th Cir. 1985) (holding that trial court had jurisdiction to release baseless common-law liens against the judge, prosecutor, defense counsel, and IRS agents involved in tax protester's prosecution for failure to file income tax returns); *United States v. Elblad*, 732 F.2d 562 (7th Cir. 1984) (involving common law lien filed against IRS employee assigned to collect delinquent taxes); *United States v. Hart*, 701 F.2d 749 (8th Cir. 1983) (per curiam) (involving common law liens recorded by registers of deed and indexed against real property owned by IRS employees following IRS audit); *United States v. St. Paul*, 1993 WL 501833 (C.D. Cal. Aug. 30, 1993) (granting Government summary judgment motion in action to expunge "A Security (15 U.S.C.) Claim of Commercial Lien" to seize all real and moveable property of 16 IRS employees, a bankruptcy judge, the bankruptcy trustee and the trustee's staff attorney, and an Assistant United States Attorney); *United States v. Van Dyke*, 568 F. Supp. 820, 821 (D. Ore. 1983) (observing that tax protesters file common law liens "to harass IRS employees and deter them from enforcing the tax laws.")

trial, a jury returned guilty verdicts against six of the seven defendants charged in this case.⁴ These six defendants were convicted of a *Klein* conspiracy, i.e., a conspiracy to defraud the United States by impeding and impairing the IRS in the ascertainment, computation, assessment, or collection of taxes. Several defendants -- who had TPCS as managers, coordinators, and/or administrators -- also were convicted on substantive tax charges and mail fraud charges. Through TPCS, the defendants promised to "untax," permanently and legally, individuals and businesses who followed their directions and the advice contained in the "Untax Package," which was for sale to individuals who became members of TPCS. Once "untaxed," members were told that they would thereafter have no legal obligation to keep records for income tax purposes, file tax returns, or pay any income tax. Members were told that the IRS is not a Government agency but is a private corporation organized under the law of the State of Delaware and that non-resident aliens were not legally required to pay Federal income taxes. From January 1990 through December 1993, the defendants collected in excess of \$3 million by the sale of the Untax Package and other creeds.

After the sentence was imposed, both Phillip and Marlene Marsh were taken immediately into custody. In response, the Attorney General stated at her weekly press availability that "[t]his successful prosecution of one of the nation's largest illegal tax protester organizations sends a clear message to those who would cheat or counsel others to cheat the Government that they will be held fully accountable for their crimes." The Marsh sentencing followed closely the sentencing in Dallas, Texas, in May 1996 of eight TPCS Associate Members to terms of incarceration ranging from three to nine years. This brings to 34 the total number of TPCS members who have been charged with criminal tax offenses or other criminal offenses to date.

- In *United States v. Gerald Joe Henson* (W.D. Tex.), a jury convicted the defendant of conspiracy to defraud the United States, uttering counterfeit securities, possession of false papers to defraud the United States, and mail fraud. Henson was one of seven people indicted in September 1995 by a federal grand jury for his participation in a scheme to defraud the IRS by producing, selling, and mailing approximately \$2 million in bogus money orders to the IRS. Henson and his co-defendants were selling these bogus money order packets through organizations known as "USA First" and "O.M.B. W.D. McCall." Henson is also a leader of an anti-Government tax protester organization called "United Sovereigns of America," and has written and published tax protester, anti-Government and militia books and literature, including a book on Common Law Courts. In June 1996, one of Henson's co-defendants, Wayne Slater, pled guilty to one count of mail fraud. Slater, who was previously convicted in San Antonio for his participation in this bogus money order scheme

⁴The Tax Division's trial attorney and the two Assistant United States Attorneys who tried this case received the Attorney General's 1996 John Marshall Award for the Trial of Litigation

on charges of conspiracy to commit mail fraud and for using the bogus money orders to defraud private creditors, agreed to testify against his co-defendants. Henson's conviction followed. Both defendants are scheduled to be sentenced in Fall 1996.

- In *United States v. James L. Noske, Joan M. Noske, John B. Ellering, Inelda M. Spaeth, Loren Scherping, Laverne Scherping, and Dwaine Weber* (D. Minn.), in November 1995, after two months of trial, a jury convicted six of seven defendants on multiple tax and money laundering charges. The principal defendants, James and Joan Noske, who have long been active protesters in central Minnesota, were convicted on a *Klein* conspiracy to defraud, a conspiracy to evade payment of the income taxes, and a substantive evasion of payment charge. Joan also was convicted on five counts of structuring financial transactions to avoid filing currency transaction reports. The total additional tax due and owing for the five prosecution years was about \$250,000. The *Klein* conspiracy was based on the concealment of taxpayers' assets and income from the IRS through the use of multi-layered trust schemes and alleged non-profit corporations. The Noskes sold these trusts, claiming it was a legal means to avoid paying income taxes. The conspiracy to evade payment and substantive evasion of payment charges were based on the use of the multi-layered trusts to conceal assets from the IRS.

- In *United States v. Robert Clarkson, Herbert Fleschner, and Vernon Rubel* (W.D.N.C.), three tax protesters were convicted in October 1994 on a *Klein* conspiracy charge. They organized the Hickory Patriots, which advised incoming members to increase the number of allowances claimed by them on their Forms W-4 and to stop filing returns. Clarkson testified at trial that he last filed a Federal income tax return for 1978, and Fleschner testified that he last filed for 1986. Clarkson is a disbarred attorney who was convicted in 1978 of filing false claims for refund. Fleschner is a chiropractor who practices in Hickory, North Carolina. In January 1995, Clarkson was sentenced to 57 months in prison, and Fleschner was sentenced to 38 months in prison. Rubel's sentencing is pending.

- In *United States v. Stuart Tulchinsky and Cathie Schneider Tulchinsky* (D. N.H.), these tax protesters were charged with evading taxes of approximately \$140,000 for the years 1986 through 1989. In this four-year period, the defendants bought a lake front vacation home, took annual vacations in Jamaica, and spent \$350,000 (mostly in cash) to build a new home. In April 1995, a jury convicted both defendants. Tax protester giant Irwin Schiff and other nationally known protesters testified on behalf of the defendants. In July 1995, both defendants were sentenced to serve 18 months in prison; each was fined \$5,000 and ordered to pay restitution to the IRS.

Litigation Related to the "Common Law Courts" Movement

Over the last several years, the IRS and the Tax Division have been compiling information about the "common law court" movement, including various organizations in Texas, Louisiana, Florida, and Michigan. The movement is premised on the philosophy that supreme authority resides in "the people." Federal, state, and local laws, and action taken by Government actors under color of law, are viewed as unconstitutional and wholly null and void. They confer no rights, create no offices, bestow no power or authority, confer no responsibility, afford no protection, and fail to justify any action. Accordingly, the movement has established its own system of "common law courts."

Among the provisions governing so called "common law courts" are rules stating that these courts have original jurisdiction to determine who is a citizen of the United States of America and original jurisdiction in all actions by and against citizens of the United States. See, e.g., "How to Establish a Common Law Court, Comprehensive Documented Instructions and Information." These rules provide that there shall be no criminal actions commenced or prosecuted against or by a citizen. They state that citizens are "entitled" to transfer matters from the United States District Courts to their "common law courts." See Devin Burghart and Robert Crawford, *Guns & Gavels: Common Law Courts, Militias & White Supremacy*, Appendix B, Court Rules for Madison County, Idaho Common Law Court, Portland (Ore): 1996.

Members of this movement often claim that they are not citizens or residents of the United States or any State. They claim non-resident alien status, subject to the jurisdictional immunities of a foreign state as defined in 28 U.S.C. §§ 1602-1611. They state that the income tax is illegal. They do not always accept Government benefits, they say that they do not have faith in the paper money system (and attempt to pay all their debts with coin currency), and they claim not to believe in automobile insurance or state supported automobile or driver's licenses.

While there are undisputed lies between individual tax protesters who support the "common law court" movement and domestic terrorist organizations, some adherents attempt to draw a distinction. For example, at the General Council meeting of the Republic of Texas, convened on April 20, 1996, in Dallas, officers stated "that the Republic of Texas maintains the position that it has always held, which is one of neutrality, non-aggression (sic), and peaceful transition." See Report on Republic of Texas General Council Meeting, April 20, 1996, appearing on the World Wide Web at <http://www.flash.net/~robertk/mcct0420.htm>.

As demonstrated below, the Tax Division has had numerous contacts with the "common law courts movement" in its litigation.

- In *United States v. Lake, et al*, No. CV-95-P-2698-W (N.D. Ala.), the Tax Division brought a civil suit to expunge baseless liens and enjoin further harassment of IRS agents and credit union officials who had honored an IRS levy. In late 1995, the Government filed a motion for summary judgment and sought expedited consideration. The court granted a preliminary injunction enjoining the defendants, two tax protesters, from harassing the IRS and credit union representatives. The defendants responded with a document construed by the court as a motion to dismiss, which was denied. Thereafter, in January 1996, the defendants filed with the Clerk of the United States District Court a "Notice of Removal" of the federal proceedings to the "common law court" of the Republic of Texas.⁶ The "removal action" was served on United States District Judge Sam Pointer (the presiding judge), the Attorney General, the United States Attorney, and the Tax Division trial attorney as defendants. The filing also included a "Petition to Remove Action from De Facto Corporate Court to Our One Supreme Court of Common Law Venue with Original and Exclusive Jurisdiction, Petition for Declaratory Judgment, and Petition for Writ of Prohibition" and accompanying affidavits, and a "Judicial Order and Judgment." See documents collected in Attachment E. The notice of removal states that:

The attorneys ... that have prosecuted this action as agents of foreign principals have committed criminal acts in conspiracy with Judge Pointer. They too will be prosecuted and the punishment will fit the crime.

The conspirators that have prosecuted this action have played their little game pretending that they have jurisdiction over the undersigned. The undersigned has acted in good faith to demonstrate beyond question the error of the prosecuting party. Being uncivilized, criminal elements of the corrupt, bankrupt, corporate Government, the attorneys for the foreign agents continue to deny truth, and, rather than prosecute the criminal IRS agents, they have chose to defend their partners in crime.

In late February 1996, the defendants filed with the District Court, a "Judicial Notice of the Filing of Emergency Constructive Notice of Petition for Emergency Writ of Prohibition," indicating a writ was being sought from the United States Court of Appeals for the Eleventh Circuit. In the meantime, the Government's summary judgment motion is pending.

⁶The full name of this "common law court" as it appears in the heading on the documents filed is the "republic of Texas[,] our one supreme court[,] common law venue; original and exclusive jurisdiction[,] a superior court sitting with the power of a circuit and UNITED STATES District Court[,] the people in and for Harris county, Texas state[,] united states of America.

- The Tax Division also frequently receives bogus quiet title actions "brought" in common-law court by "freemen" and served on the Attorney General or the President. The Division's Civil Trial Section, Western Region, for example, recently received 14 such "suits" in one day. Such "suits" also have been referred to the Division by the White House through the Department's Executive Secretariat. The papers declare that the United States has no jurisdiction over the plaintiff or plaintiffs so that they do not owe any taxes to the United States. See, e.g., documents from the "united states of America, country of California (organic), Los Angeles county, (de jure)" and Order and Judgment of the United States Court of Appeals for the Tenth Circuit entered in *Ensminger v. Farm Credit Bank*, Nos. 94-6415, 94-6417 (10th Cir. Apr. 7, 1995) (same issue). Generally, the Tax Division does not take action with respect to such irregular purported suits unless they are accompanied by baseless liens or other affirmative actions.

- Where defendants in criminal prosecutions employ "common law court" devices, the circumstances may involve the risk of harm to federal law enforcement officials. For example, in *United States v. O'Neill, et al.*, No. A-95-CR-154 JN (W.D. Tex.), the Tax Division is assisting in the prosecution of seven defendants involved in a scheme to promote the use of bogus money orders as legal tender. In April 1996, an individual previously identified by the IRS Inspection Division as a potentially dangerous taxpayer¹⁴ filed on behalf of the defendants a 57-page emergency appeal in the United States Court of Appeals for the Fifth Circuit asserting that U.S. District Judge Nowlin does not have jurisdiction over the prosecution because the United States has no jurisdiction in Texas. In addition, the "Chief Foreign Legal Officer of the Republic of Texas" sent a certified letter to the Hon. Henry Politz, Chief Judge of the Fifth Circuit, saying that

You are hereby legally served notice that under the laws of nations, that the People of the Republic of Texas have reconstituted and claimed their rights to the sovereign right of Eminent Domain of the Soil of Texas.

You are hereby notified to begin immediate preparation and whatever procedures are necessary to vacate the sovereign Soil of the Republic of Texas, or you will be held in violation of an International Boundary Treaty, perfected between the Republic of Texas and United States of America on October 13, 1838 and in violation of Article 6 of the constitution of the United States under pacific performance of your oath of office.

¹⁴A "potentially dangerous taxpayer" is an individual who has been classified as such by the IRS Inspection Division because he or she fits certain criteria. This classification includes individuals who make specific threats against IRS employees and employees of other governmental agencies, and people who are active members in tax protest groups that advocate violence against IRS employees.

The letter also included a February 24, 1996, letter to "All the Member Nations of the United Nations" from "The People of the Republic of Texas by and Through Their Provisional Government by the Authority of its Greater Council," a "Default Judgment on Common Law Writ of Quo Warranto Under the Law of Nations," and three documents entitled "True Bill of Indictment." The letter indicates that copies of the letter and attachments were sent to all federal judges, clerks, and courts in Texas.

- Tax Division prosecutors also have been served with documents accusing them of criminal conduct, demanding that they make admissions, and purporting to require the execution of promissory notes as punishment. For example, one attorney who regularly prosecutes tax protesters received a "Special Appearance, Notice to the Court of Possible Mistake/Error and/or Fraud and Demands by Special Appearance, a Notice of Refusal, Demand, Declaration & Certification, a Promissory Note in the Nature of an Indemnity Bond." The documents purport to require the attorney to admit having "acted in bad faith," "perpetrated fraudulent concealment," and having "trespass[ed] upon inalienable rights by fraudulent, malicious and abusive process in an attempt at common barratry (sic) and fraud on the court." As compensation for these actions, the attorney is required to execute a promissory note for \$2 million in silver, or to present a letter or "admission or error and apology with declared intention to remedy and compensate [the victim] for [the] injurious errors."

In sum, these cases are always extremely resource intensive. A modest infusion of resources will enable the Tax Division to respond to this growing need by re-tooling its resources, marshalling its knowledge, and supporting efforts in the field to bring tax protesters to justice.

ELECTRONIC FREEDOM OF INFORMATION ACT LEGISLATIVE AMENDMENTS

	Positions	FTE	Amount
Civil Litigation	2	2	\$191
Total Increase	5	3	\$191

The Tax Division needs additional resources to comply with several changes to the Freedom of Information Act (FOIA) and the Privacy Act enacted by Congress in 1996. The Division estimates that the new workload will require one attorney, two paralegals, a legal data technician, and one legal assistant, *i.e.*, three FTE and \$191,000.

Under prior law, the Tax Division was authorized to respond to requests for information made pursuant to the Freedom of Information Act on a first come, first serve basis. In 1996, Congress enacted amendments that impose a new 20 working-day response. These new provisions will create significant burdens on the Division's FOIA unit which, excluding litigation matters, is currently allocated only two partial attorney positions, one paralegal, and a partial secretarial position.

For the last several years, the number of FOIA requests received by the Tax Division has increased annually. In calendar year 1994, the Division received less than 300 requests. By the end of 1996, the Tax Division received approximately 535 new FOIA requests. The Division did an excellent job of meeting the deadlines of the old law in 1996. If the deadlines of the present law had been in effect, however, and sufficient resources were not supplied, at times more than 90 percent of the pending requests would have been overdue. In order to comply with the current law, the Tax Division needs to have the resources to handle new requests within 20 working-days, to keep pace with the already increasing number of requests, and also to handle the flood of additional requests that almost certainly will result from growing public awareness of the new legislation. The Division also anticipates that the new legislation will generate increased litigation, particularly among tax protesters, which the Division will be required to defend.

In addition, other portions of the new law will necessitate that the Division expend new resources to reply to individual requests by creating and maintaining responsive records in an electronic format, and to make commonly requested information available for viewing on the Internet. These resources will require a legal data technician as well as new technology.

In sum, additional resources will be required to accommodate the faster turn around time on new requests, to handle the already growing and anticipated increase in requests, to convert voluminous records to readily accessible electronic format, and to defend new litigation.

The Tax Protester Initiative has the following objectives:

1. To develop a systematic approach for handling criminal prosecutions of organized tax protester groups;
2. To develop a systematic approach for handling defensive civil litigation brought against the Government by tax protester organizations and individuals who identify themselves as associated with the tax protester movement;
3. To develop new strategies, including affirmative litigation, that will deter tax protester activities;
4. To develop systems for sharing and readily accessing the body of knowledge developed by the IRS and the Tax Division as a result of many years of litigation with tax protesters, e.g., correspondence, sample pleadings, jury instructions, brief banks, and
5. To provide training to Assistant United States Attorneys and IRS personnel so that criminal prosecutions of tax protesters and civil tax protester litigation are handled efficiently and effectively.

Criminal Division
Salaries and Expenses
Program Performance Information
Government Performance and Results Act

Mission: The mission of the Criminal Division is to develop, enforce, and exercise general oversight for federal criminal laws, except those that are specifically assigned to other Divisions. The Division oversees criminal matters under more than 900 statutes; supervises certain civil litigation; advises the Attorney General on matters concerning criminal law; monitors sensitive areas of criminal law requiring coordination, such as attorney subpoenas, attorney fee forfeitures, and international law enforcement; establishes and facilitates the implementation of criminal law enforcement policies; provides leadership for coordination of federal-state-local law enforcement relationships; and coordinates law enforcement issues relating to national security.

The first concise mission statement for the Division appears in a message from the President of the United States transmitting a manuscript entitled, "Origin and Development of the Office of the Attorney General" to the House of Representatives in 1929. In the manuscript, President Coolidge writes:

"An Assistant Attorney General has charge of a Division which operates in connection with the enforcement of criminal laws of the country by giving direction, where necessary, to the prosecution of cases involving crimes against the United States and to all the other matters involving criminal practice and procedure, such as questions pertaining to indictments, grand juries, search warrants, passports, alien enemies, extraditions, etc. Under the Division also come questions arising in connection with crimes committed on the high seas, crimes arising under the national banking law, and under naturalization laws, and from which is given, when necessary, advice and instruction to United States Attorneys in various districts respecting the conduct of criminal cases."

There have been any number of expansions of the Division's responsibilities since 1929. While the basic mission remains unchanged, we have broadened the scope to encompass national security law enforcement issues that have taken us into the arena of international affairs.

**Criminal Division
General Goals And Objectives**

- 1) Reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts. Reduce violent crime, including organized crime and gang-related violence.
- 2) Identify and neutralize the activities of foreign and domestic entities that endanger national security, including domestic terrorism and espionage, through effective counterterrorism and counterintelligence programs.
- 3) To direct and coordinate the federal effort against white-collar crime, with a focus on fraud involving government programs, financial institutions, procurement, and health care. To implement and coordinate a nationwide program to ensure the integrity of both public office and the electoral system at the federal, state, and local levels of government. To coordinate the investigation and prosecution of violations of federal obscenity and child pornography laws.
- 4) To ensure the appropriate use of the most sensitive investigative tools available to the investigative agencies in their conduct of criminal investigations. To develop, coordinate and implement, through litigation, nationwide policies and programs regarding the seizure and forfeiture of the assets and profits of criminals and criminal groups and actively prohibit the money-laundering process of illegal drug proceeds through a program of relentless investigative and prosecutorial operations.
- 5) Coordinate and integrate DOJ law enforcement activities wherever possible, and cooperate fully with other federal agencies that are critically linked to improve operation of the justice system.

1998 Base	96	97	11,932
1998 Estimate	101	100	12,405
Increase/Decrease	5	3	473

Base Program Description: This decision unit focuses on the following objectives:

- Ensuring the investigation and prosecution of all major organized crime groups and activities.
- Assisting the Department in fulfilling its responsibilities in the development and implementation of domestic and international narcotics law enforcement programs and policies.
- Providing direct litigative support to the Organized Crime Drug Enforcement Task Force (OCDEF) and High Intensity Drug Trafficking Area (HIDTA) Program, other multi-agency initiatives, and U.S. Attorneys' Offices (USAOs) in recusal matters or as requested.
- Participating, on behalf of the Department, in the development and administration of cooperative drug enforcement initiatives and projects conducted by the law enforcement and intelligence communities.

Accomplishments:

- In 1996, the Organized Crime and Racketeering Section (OCRS) continued its high level of success in prosecuting organized crime leaders and dismantling illegal underground enterprises in major cities. For example, federal prosecutors

under OCRS' supervision indicted most of the hierarchy of the Genovese La Cosa Nostra (LCN) family in New York City on Racketeer Influenced and Corrupt Organizations (RICO) charges; the Genovese LCN is the country's largest and most powerful LCN family. Prosecutors also indicted the entire leadership of the Detroit LCN on RICO charges, convicted the boss and several leaders of the Philadelphia LCN for RICO-murder, and recently indicted the new boss of the Gambino (NYC) LCN family for RICO-extortion. Over the last year, the rate and seriousness of cases involving Russian and Asian crime groups continued to rise, reflecting the sharp increases in the size of the Russian and Asian ethnic communities in the United States. As a result, OCRS broadened its efforts to address Russian and Asian gangs and the violence they engender. For example, under OCRS direction, federal prosecutors in Brooklyn convicted this country's most powerful Russian criminal, Vyacheslav Ivankov, for extortion. In the area of Asian organized crime, over 75 defendants were indicted for various offenses, including Hobbs Act and RICO violations arising from a series of robberies of computer chip companies in California, which collectively amounted to several million dollars. Similarly, a major gun smuggling ring connected to munitions manufacturers in the People's Republic of China was indicted for smuggling 2,000 automatic weapons into the United States.

As part of its role in the Department's Southwest Border Initiative (SWBI), the Narcotic and Dangerous Drug Section (NDDS) prosecuted SWBI cases involving more than 68,124 kilograms of cocaine, 57,820 pounds of marijuana, 1,235 pounds of methamphetamine, and 21 kilograms of heroin. NDDS participated jointly with the U.S. Attorney's Office for the Southern District of California in an SWBI case involving a three-year, multi-jurisdictional investigation of a major Mexican trafficking organization conducted by the DEA, IRS, U.S. Customs, INS, and various local law enforcement agencies. The investigation culminated in the convictions of four principals, including the principal lieutenant. Over the last year, NDDS continued to prosecute large-scale narcotics cases through its satellite office in Puerto Rico. Puerto Rico's proximity to the United States has made it a major transshipment point for multi-kilogram quantities of Colombian cocaine entering the eastern and southern U.S. In 1996, NDDS responded aggressively to the narcotics being trafficked through Puerto Rico and prosecuted cases involving a total of more than 17,233 kilograms of cocaine, 17,200 pounds of marijuana, and 201 kilograms of heroin. In one case, NDDS trial attorneys successfully prosecuted over 20 members of a major drug trafficking organization that distributed hundreds of kilograms of cocaine, heroin, and marijuana in public housing projects throughout the San Juan area. Since October 21, 1995, when President Clinton signed Executive Order 12978, NDDS has worked with the Department of the Treasury to identify 282 companies and frontpersons in Colombia that are owned, or controlled by, or act on behalf of, the leaders of the Cali Cartel, and has imposed sanctions on them pursuant to the International Emergency Economic Powers Act (IEEPA). IEEPA sanctions have closed bank accounts, disrupted wholesale supply networks, and caused the isolation of Cartel-owned or controlled companies in international

financial systems. During the past year, IEEPA sanctions forced Cali Cartel kingpins Manuel and Gilberto Rodriguez to sell their pharmaceutical empire. In addition, NDDDS has provided substantial litigation support and expert assistance to United States Attorney's Offices in various capital case prosecutions. For example, in U.S. v. Lamont Janner Fleming, et al., NDDDS collaborated with the U.S. Attorney's Office for the Eastern District of North Carolina in the conviction of nine defendants charged in connection with interstate drug trafficking and three related murders.

Program Changes:

	Pos.	FTE	Amount
Drug Strategy	5	3	\$ 473

This initiative seeks to address the following objectives:

- Increase the Division's participation in the Southwest Border Initiative to meet workload needs (3 positions); and
- Increase staff in order to keep pace with the increasing amount of Federal capital case prosecutions that the Division must review (2 positions).

As a part of its overall Drug Strategy the Criminal Division is requesting 5 positions (all attorneys), 3 workyears, and \$473,000. If approved, the resources necessary for FY 1999 will amount to 5 positions, 5 workyears, and \$793,000.

Southwest Border Initiatives

The Criminal Division coordinates the targeting and management of multi-district investigations and prosecutions undertaken pursuant to the Southwest Border Initiative (SWBI), the Department's priority narcotics enforcement program. This initiative targets the major Mexican trafficking organizations that import tons of cocaine, marijuana, heroin, methamphetamine and precursor chemicals into the U.S. As much as 70% of all the cocaine entering the United States is believed to come across the southwest border. The targeted organizations traffic in a variety of controlled substances while committing criminal acts of violence to further their illegal narcotics activities. As a result, the quality of life in the states along the border is frequently in jeopardy.

Through the SWBI, the Administration has committed an unprecedented amount of resources and attention to stem the flow of drugs, guns and illegal immigration along the U.S.-Mexico border. From Washington, the Division provides central coordination and direction for multi-district investigations and prosecutions, together with headquarters representatives from the investigative agencies. This coordination reaches all facets of the Administration's unified SWBI strategy.

With regard to domestic investigations and prosecutions, the SWBI routinely targets the highest managerial levels of the drug trafficking organizations, as well as their regional operation centers and their client organizations. This prosecutive approach is the most effective way to realize the greatest disruption to the illegal activities of the organization and its operatives. As a consequence, the Division is called upon to facilitate and coordinate these multi-pronged investigations by ensuring complete cooperation and communication among the investigating entities and districts. This type of coordination ensures that a targeted organization is attacked as a whole and not in a piecemeal fashion.

The Administration's unified strategy along the southwest border also focuses the efforts of the intelligence community, the military and the law enforcement community -- resulting in a present and growing need for coordination among these groups. Centralized management is essential to protect the integrity of the ongoing investigations and prosecutions and to maintain the effective interworkings of the military, intelligence and legal communities. The Division takes the lead in the operational coordination for the Department in SWBI matters. As the investigations undertaken as part of the initiative have continued to expand, the need for additional resources to support this crucial coordination function has become even more acute.

In addition, the Division maintains its traditional responsibilities for overall policy matters and for responding to United States Attorney's Office's requests for litigation support and assistance. These traditional roles have expanded proportionally with the increase in cases and investigations undertaken pursuant to the Initiative.

One example of the Division's involvement in the SWBI is the recently concluded Zorro II investigation. This effort involved intensive, full-time coordination by the Division over an eight-month period. This was the most significant SWBI effort that was concluded during FY 96 and is therefore a matter of public record. The operation involved 14 judicial districts and more than 90 court-authorized wiretaps. The headquarters level attorneys assigned to organize this investigation worked virtually exclusively on this assignment during the eight months. The day before the Zorro II takedown, those same attorneys began planning the next multi-district SWBI investigation that is now still ongoing.

For FY 1998, the Division is requesting three attorneys to increase its ability to coordinate and support the SWBI from

headquarters. In order to meet workload increases, the Division must receive additional resources to effectively manage this multi-pronged initiative. If not, the Division's ability to continue the level of success achieved thus far will be impaired, and the quality of the initiative as a whole will suffer. The Attorney General repeatedly has emphasized the need for greater centralized management and coordination of large-scale efforts such as the SWBI. The Division serves as the Attorney General's eyes and ears regarding the SWBI and its involvement ensures that the initiative is managed and conducted efficiently. As this effort continues to grow, such management and coordination is resource intensive and cannot be performed without additional positions for the Division.

Federal Capital Case Prosecutions

The Criminal Division is requesting two attorney positions to enhance its capability to manage the increasing workload associated with federal capital case prosecutions. The Division's Narcotic and Dangerous Drug Section (NDDDS) assists the Department in fulfilling its responsibilities for administering more than 50 federal death penalty offenses. NDDDS maintains a unit of attorneys with a concentrated depth of knowledge and expertise who participate in the Attorney General's Capital Case Advisory Committee to develop policy and procedures for federal capital prosecutions. The attorneys also review and recommend appropriate action by the Attorney General in response to requests from U.S. Attorneys for authorization to indict and seek the death penalty for narcotics-related offenses. They also draft and maintain a library of resource materials for use in federal capital litigation.

NDDDS attorneys conduct the first-level review of narcotics cases in which a U.S. Attorney intends to charge a defendant with an offense subject to the death penalty. In the last five years, NDDDS has provided a comprehensive analyses and appropriate recommendations to the Attorney General for more than 95 defendants charged with capital offenses in drug-related cases. NDDDS attorneys have also provided advice and assistance to federal prosecutors in the cases of more than 70 defendants charged with other than drug-related capital offenses.

Section attorneys continue to perform analyses of constitutional, substantive and procedural legal issues for Assistant U.S. Attorneys evaluating capital case investigations and prosecutions. The Deputy Chief for Policy and three attorneys participate in the Attorney General's Working Group that drafted the protocol for evaluating potential federal death penalty prosecutions and continue to advise senior Department attorneys on policy, procedures and training in the Department's capital case litigation.

The responsibilities of Division attorneys assigned to capital cases have significantly expanded as a result of three events: (1) the establishment of the Attorney General's Anti-Violent Crime Initiative in October 1993; (2) the enactment of the Violent Crime Control and Law Enforcement Act (VCCLEA) in September 1994; and (3) the promulgation of the Department's capital case "Protocol" (USAM 9-10.000) in January 1995.

In September 1994, the VCCLEA expanded the number of Federal death penalty offenses from a handful to over 50. As a result of the Anti-Violent Crime Initiative, Federal prosecutors are devoting additional resources to the investigation and prosecution of violent gangs and are pursuing indictments under capital statutes including drug-related, violent and organized crime offenses. The capital case expertise of NDDDS' attorneys enables them to effectively provide review, evaluation, advice, and assistance to USAOs, other Criminal Division sections, and other Department components, in cases indicted under the VCCLEA for drug and non-drug related offenses. As a result of the January 1995 promulgation of the Protocol, both the Attorney General and the Attorney General's Capital Case Review Committee evaluate all cases in which death-eligible offenses are charged. Therefore, even in those cases in which the USAO recommends against seeking the death penalty, Criminal Division attorneys perform an extensive review of the case to facilitate the Review Committee's evaluation under the Protocol. In the five years prior to the Protocol, NDDDS and senior Department attorneys reviewed the cases of approximately 55 defendants charged with drug-related capital offenses. Pursuant to the Protocol, NDDDS attorneys have reviewed U.S. Attorneys' submissions for more than 100 defendants charged with drug-related and other capital offenses--an average of six capital cases per month.

To effectively manage the increased death penalty litigation, the Criminal Division proposes to expand upon the efforts of NDDDS, and create a "Capital Litigation Response Team" comprised of federal prosecutors with significant "hands-on" experience in capital cases. The mission of the response team will be to ensure that those federal prosecutors in the various districts around the country who are prosecuting capital cases have enhanced access to the expertise and resources needed to do so effectively. NDDDS attorneys have been, and will continue to be, available to serve on the U.S. Attorney's capital case prosecution teams as needed. Accordingly, the Division is requesting two attorney positions for FY 1998.

	Perm. Pos.	FTE	Amount
White Collar Crime			
1997 Enacted	200	201	\$23,733
1998 Base	200	201	24,529
1998 Estimate	205	204	24,983
Increase/Decrease	5	3	454

Base Program Description: Staff in this division unit focus on the following objectives:

- Overseeing the federal effort to combat corruption through the prosecution of elected and appointed public officials at all levels of government and handling all matters involving alleged misconduct by federal judges and other corruption matters in which a United States Attorney's Office is recused.
- Supervising the investigation and prosecution of conflicts of interest and election crimes.
- Conducting major criminal investigations and prosecutions of fraudulent schemes against individuals; institutions and the United States Government.
- Developing and enhancing local, state, federal and international law enforcement cooperation in the prevention of fraud schemes.
- Identifying the major offenders of child exploitation, child sexual abuse, child prostitution, and obscenity statutes and prosecuting cases of national scope.
- Coordinating child exploitation prosecutions with U.S. Attorneys' Offices.
- Assisting the U.S. Attorneys' Offices in investigating and prosecuting offenders and providing the U.S. Attorneys' with the requisite specialization in these sensitive high profile areas of the law.
- Developing and coordinating national projects and prosecutions that involve the protection of minors from sexual

exploitation and abuse.

- Implementing a comprehensive program designed to address the growing global computer crime problem.

Accomplishments:

- The Public Integrity (PI) Section continued to aggressively pursue convictions against elected and public officials engaged in corruption. In particular, the Section was successful in obtaining a conviction against William Lanning, a Senior Program Manager at the Defense Intelligence Agency, who conspired to defraud the United States of \$400,000 and who engaged in a number of other crimes. PI was instrumental in prompting one current and three former Department of Agriculture career employees to plead guilty to conspiracy as a result of promises made to co-workers which sought to trade official government benefits for contributions to a political action committee. The Section was also successful in gaining convictions against three CIA employees and their accomplices for their roles in intercepting items in the CIA's classified mail and then using stolen CIA credit cards to obtain more than \$193,000 worth of goods and services. In addition, the Section continued its highly effective administration of the Independent Counsel provisions of the Ethics in Government Act, including conducting preliminary investigations under the statute, and handling independent counsel inquiries concerning legal issues, Departmental policies, requests for documents and interviews of Department personnel.
- The Fraud Section was heavily involved in the re-creation and revitalization of the Department's Advisory Council on White-Collar Crime. The Section provided direction to interagency law enforcement working groups to promote an aggressive and cohesive federal response to fraudulent activities in the areas of health care, telemarketing, financial institutions, securities and insurance. In support of Advisory Council objectives, the Fraud Section coordinated Operation Senior Sentinel, the largest nationwide undercover operation ever devised to combat telemarketing fraud. Begun by the Department in early FY 1996, this initiative has resulted in the prosecution of more than 800 individuals, with prison sentences as long as 14 years. In the area of health care fraud, the Fraud Section and the United States Attorney's Office for the Southern District of Georgia jointly convicted ABC Home Health Services, Inc., the nation's largest privately-owned home health care provider, of defrauding Medicare through false statements and claims for reimbursement. In addition, the Section continued to support the Department's financial institution fraud enforcement program. Of the many convictions that the Section obtained in 1996, one of the most significant was the conspiracy and bank bribery convictions of Richard J. Arnone, Sr., a former vice president and senior loan officer of First Mutual Bank for Savings and Susan G. Middleton, a former real estate developer and borrower of the bank.

- The Child Exploitation and Obscenity Section (CEOS) strongly supported the Department's battle to protect children from individuals who use the U.S. Mail System or computers to sexually abuse and exploit them. For example, in conjunction with the United States Postal Inspection Service, CEOS developed and initiated a nationwide investigation and prosecution program designed to identify and prosecute individuals who use U.S. Mail to distribute and receive child pornography. Through the first half of FY 1996, this project, entitled "Project Special Delivery," resulted in searches of 133 residences and in the apprehension of several dangerous child molesters. More than 72 individuals have been formally charged as of November 25, 1996 with more than 40 cases resolved by conviction. In collaboration with the FBI, CEOS helped to coordinate the "Innocent Images Project" which strives to combat the trafficking of child pornography over computer networks. This was the first national project of its kind to target the misuse of a major U.S. online service provider (America Online) by pedophiles and others involved in transmitting pornographic images of children. The project utilized novel investigative and prosecution techniques, served as a laboratory for policy initiatives, and identified critical issues which are now being addressed. To date, more than 200 individual investigations have been opened, 80 individuals arrested, and 66 convictions obtained. Further, CEOS has continued its efforts to address the problems of child prostitution within the United States and abroad. In addition to enhancing investigations and prosecutions, CEOS has worked extensively with local and state non-governmental organizations in developing strategies to address the victim and witness aspects of child prostitution in the United States. The Section also participated in international activities through INTERPOL and the United Nations to increase international cooperation to better address sex tourism issues.
- With extensive expertise in emerging technologies, large-scale communications networks, and other related areas, the Computer Crime and Intellectual Property (CCIP) Section continued to serve as leading advisors and spokespersons for the Department on encryption and other technical issues. Two CCIP attorneys filled leading roles in government-wide efforts to protect the nation's information infrastructure—one served as a commissioner on the President's Commission on Critical Infrastructure Protection and the other was a member of the Intergovernmental Information Protection Task Force. CCIP was instrumental in the drafting of the National Information Infrastructure Protection Act of 1996, passed as Title II of the Economic Espionage Act. This legislation significantly broadened federal jurisdiction over computer crimes—offenses that attack the confidentiality, integrity, and availability of information systems and the data they contain. In addition, CCIP coordinated investigations of hacker attacks into numerous military and government information systems, culminating in the first court-ordered wiretap of an unknown intruder in a packet-switched network (Harvard University, Faculty of Arts and Sciences). In an effort to expand the Department's capabilities to address computer-related crime, CCIP also helped to establish a Departmental Computer/Telecommunications Coordinator Network consisting of 120 federal prosecutors from across the nation.

Program Changes:

	Poa.	FTE	Amount
Computer Crime Initiative	5	3	\$454

To address the emerging area of computer crime, the Criminal Division is requesting an increase of 5 positions (4 attorneys), 3 workyears, and \$454,000 for FY 1998. If approved, resources necessary in FY 1999 are 5 positions, 5 workyears, and \$745,000.

The Criminal Division plays a significant role in the federal effort to protect critical computer networks. Today's terrorists frequently utilize computer networks to communicate, plan and execute terrorist attacks. The Criminal Division, through its Computer Crime and Intellectual Property Section, is responsible for ensuring that the Department can respond quickly and effectively to terrorist attacks on our networks. Through participation on the President's Commission on Critical Infrastructure Protection and the Information Protection Task Force, the Division is working to protect network integrity from terrorist attacks. As a part of this effort, the Division is working, along with other Federal agencies, to develop an international plan to address cryptography.

The Division's newly created Computer Crime and Intellectual Property Section is responsible for implementing the Justice Department's Computer Crime Initiative, a comprehensive program designed to address the growing global computer crime problem, including cyberattacks on critical information systems. Section attorneys are actively working with other government officials (e.g., the FBI, Department of Defense, NASA), the private sector (including hardware and software vendors and telecommunications companies), academic institutions, and foreign representatives to develop a global response to cyberattacks. These attorneys, who are responsible for resolving unique issues raised by emerging computer and telecommunications technologies, litigate cases, provide litigation support to other prosecutors, train Federal law enforcement personnel, comment upon and propose legislation, and coordinate international efforts to combat computer crime. For example, Section attorneys were actively involved in drafting two new laws--the National Information Infrastructure Protection Act and the Economic Espionage Act. Both statutes are designed to protect nation's information infrastructure and the information it contains. Section attorneys are also working on several international fora, including the Organization of Economic Cooperation and Development, the Council of Europe, and the G7/P8, to harmonize computer crime laws and eliminate the procedural impediments present in international hacker investigations.

The computer crime threat continues to grow. The number of Internet users has been doubling annually, and there are now an estimated 40 million users throughout the world. This phenomenal growth has been matched by a similar growth in the number of Internet attacks which has also doubled every year. (Source: Computer Emergency Response Team at Carnegie-Mellon University). In fact, in a recent survey, 42% of the respondents indicated that there had been an unauthorized use of their computer system within the last year. See Richard Power, *Current and Future Danger* (Second Edition), 1996, at page 2. Both statistics and experience show that current staffing levels are simply inadequate. New resources are urgently needed if the Division is to continue to play a critical role in protecting the Global Information Infrastructure. As investigative agencies expand their efforts to address computer crime, the Criminal Division must also receive additional resources to support their efforts and keep abreast of rapidly changing technology and new legal issues. For FY 1998, the Division is requesting five positions to address the increasing incidence and complexity of computer crime.

	Perm. Pos.	FTE	Amount
International			
1997 Enacted	167	163	\$20,039
1998 Base	167	169	21,434
1998 Estimate	188	181	24,397
Increase/Decrease	21	12	2,963

Base Program Description: Staff of this decision unit focus on the following objectives:

- Guiding federal and state prosecutors in the return of fugitives from abroad.
- Obtaining evidence and legal assistance from foreign governments.
- Negotiating treaties and other agreements that will facilitate the extradition of fugitives and acquisition of evidence.
- Developing, implementing and coordinating investigative and litigative strategies in the area of national security.
- Supervising all prosecutions involving the Neutrality statutes, the Espionage statutes, the Arms Export Control Act, the Export Administration Act, the International Emergency Economic Powers Act, and the Classified Information Procedures Act (CIPA).
- Administering and enforcing the Foreign Agents Registration Act (FARA).
- Providing legal support to all Federal investigative agencies engaged in national security matters.
- Identifying all alleged war criminals living in the United States and seeking to denaturalize and/or deport them.
- Developing and maintaining working relationships with foreign governments that have information relating to the activities of suspected Nazi war criminals.

- Investigating and prosecuting federal offenses related to international and domestic acts of terrorism.
- Providing experienced resources to identify, investigate and prosecute individuals engaged in violent criminal activity nationwide.
- Coordinating the Anti-Violent Crime Initiative, including the prosecution of violent gang activities, through partnerships with branches of state, local and international governments.

Accomplishments:

- The Office of International Affairs (OIA) pursued an aggressive policy of negotiating and concluding international law enforcement treaties. As a result, more treaties were signed in the past year than in any previous year. In 1996, thirteen new extradition treaties and six new mutual legal assistance treaties (MLATs) were signed. Moreover, the extradition treaty and MLAT with the Philippines, the extradition treaty with Bolivia, and the MLAT with the United Kingdom all entered into force. These treaties have, and will, allow the U.S. to pursue fugitives and evidence from around the world and help prosecute international criminals. OIA continued its efforts to improve the law enforcement relationship between the U.S. and Mexico, particularly in the areas of narcotics trafficking and fugitives. For example, improved cooperation between the two governments led to the extradition of Francisco Gomez Garcia, a convicted child molester, who was the first Mexican national extradited to the U.S., and to the arrest and expulsion of narcotics kingpin Juan Garcia Abrego to the U.S. where he was subsequently prosecuted and incarcerated. Also, in concert with the Voice of America (VOA), OIA's Fugitive Unit established an interagency international fugitive alert service, including a world wide web site. In August of 1996, VOA and OIA launched a public service program, International Crime Alert, to be broadcast every week worldwide. Once a fugitive is featured on the program, that person's photograph and identifying information will be posted on the "home pages" of the U.S. Information Agency and OIA's Fugitive Unit. In addition, OIA attorneys assisted in the formulation of the Nigerian Strategy, an interagency plan to address the growing international crime problem generated from Nigeria and West Africa, and subsequently coordinated the work of task forces and high-level meetings for the Attorney General.
- Over the last year, the Internal Security Section (ISS) worked closely with U.S. Attorney's Offices in the prosecutions of numerous individuals involved in espionage for foreign powers. Most notably, Harold James Nicholson, a former CIA officer, was charged in the Eastern District of Virginia with multiple espionage violations, and is being held without bail

pending trial. Earl Edwin Pitts was arrested in December of 1996 and was indicted for violations of the espionage statute. Serving as an FBI agent from 1987 to 1992, Pitts allegedly provided FBI information to officers of the KGB and one of its successor agencies in exchange for a total of approximately \$125,000. From 1995 to 1996, Pitts also allegedly provided classified information to an undercover agent posing as a Russian intelligence officer. Pitts is being held without bail pending trial. Among other significant cases, Robert Steven Lipka, who had worked at the National Security Agency (NSA) in the 1960s, was indicted in Pennsylvania for conspiracy to commit espionage on behalf of the Soviet Union from 1965 to 1974; and Robert Chaegon Kim, a civilian employee with the Office of Naval Intelligence, was charged in Virginia with communicating classified information to South Korea during mid-1996. ISS was also instrumental in obtaining a guilty plea from John Douglas Charlton for delivering classified Navy documents to an undercover FBI agent posing as a French intelligence officer, and in obtaining a guilty plea from Phillip Tyler Seldon, a former U.S. Army officer, for conspiring to communicate classified information to a military officer from El Salvador.

During 1996, the Office of Special Investigations (OSI) completed a complex investigation designed to identify and exclude from entry to this country those persons implicated in the Imperial Japanese Army's perpetration of the so-called "Comfort Women" mass rapes in Korea, China and elsewhere during WWII. This investigation also sought to identify and exclude persons who participated, either directly or indirectly, in the gruesome and frequently lethal pseudo-medical experiments on Allied prisoners of war and other non-volunteer subjects. This probe was successfully concluded despite the Japanese Government's non-response to the Department's request for investigative assistance. In May 1996, OSI successfully argued for the denaturalization of Aleksandras Lileikis, Chief of the Nazi-sponsored Lithuanian Security Police in Vilnius during the Nazi occupation of Lithuania. U.S. District Judge Richard Stearns returned a ruling which noted that Lileikis' wartime activities "clearly constitute" participation in the persecution of civilians. Also during 1996, OSI began representing the Department in a multi-agency federal investigation into the fate of gold and other assets seized by Nazi Germany, Switzerland and other nations during and after WWII from Jewish and other citizens.

Over the last year, the Terrorism and Violent Crime Section (TVCS) has worked with its counterparts in the investigative, intelligence, diplomatic, and military communities to precipitate the rendition of dangerous international terrorists to the United States for prosecution, thereby reinforcing the U.S. commitment to apply the rule of law to terrorist activities worldwide. For example, TVCS was instrumental in arranging the informal rendition of Omar Ali Rezaq from a North African country. Later in the year, TVCS contributed to the prosecution of Rezaq in the District of Columbia, where he was convicted for aircraft piracy and the murders of two U.S. and Israeli passengers. To further the ability of the U.S. to address international and domestic terrorism, TVCS proposed aggressive terrorist legislation which was enacted in

April 1996 and constitutes the most comprehensive package of anti-terrorism measures ever enacted in the U.S. TVCS then led the effort to implement this legislation by 1) designing and coordinating the process to designate foreign terrorist organizations; 2) coordinating efforts to effectively review the appropriateness of the application of the death penalty in pertinent cases; 3) facilitating the establishment of the Alien Terrorist Removal Court; and 4) providing legal advisory materials and policy guidance to federal prosecutors concerning the legislation. In addition, TVCS has played a leadership role in increasing federal attention on domestic terrorist activity, thereby facilitating the prevention of inchoate terrorist activity through early detection. This has involved the Section in designing and implementing a comprehensive data collection system and in developing and heading the Department's intercomponent coordination effort. Also, TVCS has enhanced the Anti-Violent Crime Initiative by developing a national strategy to prosecute and dismantle gangs using a wide variety of tools such as wiretapping, the RICO and Violent Crimes in Aid of Racketeering (VCAR) statutes, and the forfeiture and money laundering laws, which effectively attack the infrastructure of those street gangs engaging in sophisticated illegal businesses. These strategies have proved highly successful. In cooperation with the U.S. Attorney's Office for the Middle District of Florida, TVCS secured indictments in U.S. v. Clarence Michael Smith et al., involving several members of the Outlaw Motorcycle Gang.

Program Changes:

	Poa.	ETE	Amount
International Coordination	21	12	\$2,963

This initiative seeks to address the following objectives in the Division's Office of International Affairs (OIA):

Allow the Division to address the increasing workload associated with international terrorism and extradition (2 positions).

Increase the Division's presence overseas (3 positions).

Address increasing attention to multi-lateral international issues (7 positions).

Enhance the Division's ability to collect and analyze international law enforcement data and provide this information and related briefing materials to senior officials in the Department (9 positions).

The Division is requesting 21 positions (8 attorneys, 6 analysts, 6 paralegals, and 1 clerical), 11 workyears, and \$2,963,000 as a part of its international coordination initiative. If approved, the resources necessary for FY 1999 will amount to 21 positions, 21 workyears, and \$4,431,000.

Extradition and Mutual Legal Assistance

The Criminal Division's Office of International Affairs (OIA) plays a critical role in the U.S. Department of Justice's fight against terrorism. Specifically, OIA serves as the Central Authority for making and arranging the execution of all requests for international extradition and mutual legal assistance in criminal matters both to and from the United States. Some of the most sensitive and important extradition and mutual assistance cases involve acts of terrorism. The rendering of international fugitives, witnesses and evidence through extradition and mutual legal assistance is crucial to the increasing number of investigations and prosecutions of cases by federal, state and local law enforcement agents and prosecutors that require information from overseas.

In this arena, OIA negotiates law enforcement treaties and executive agreements which cover terrorist offenses; coordinates the "hiring" of international fugitives from places where formal extradition is not available to places where legal rendition is possible; and serves as the FBI's contact office within the Department on matters covered by the Attorney General's Extraterritorial Guidelines. For example, OIA played a central role in effecting the extradition of World Trade Center defendant Ramzi Yousef from Pakistan to the United States. OIA was also involved in the rendition of World Trade Center defendant Mahmud Abu Halima from Egypt, and accused airline saboteur Abdul Hakim Murad from the Philippines. The Office assisted in the preparation of the U.S. extradition documents for accused CIA alooter Mir Almal Kansil. Even the Oklahoma City bombing, although apparently an act of purely domestic terrorism, has generated the need for OIA assistance. OIA has advised U.S. prosecutors on how best to obtain, if needed, the testimony of Terry Nichols' wife, who is now residing in the Philippines.

Nor is OIA's work limited to cases of terrorism directed against the United States. OIA attorneys are directly involved in Federal extradition proceedings against Mousa Mohammed Abu Marzook, a member of Hamas accused by Israel of masterminding the financing of several terrorist acts. Office attorneys are also participating in extradition proceedings against Daya Singh Sandhu and Kamaljeet Kaur Sandhu, two Sikh separatists accused of murder and other terrorist offenses in India. And, prior to the U.S. decision to indict and prosecute Sheikh Omar Abdel-Rahman in the United States for his involvement in a large terrorist conspiracy in New York, OIA attorneys handled the request from Egypt for the extradition of the Sheikh-even to the point of sending a senior attorney to Cairo to advise the Egyptian Government on options for the legal rendition of the Sheikh

to that country.

Unfortunately, despite the increasing number of cases handled by OIA, resources for this important office have shrunk. Specifically, in 1990, OIA handled 2,618 ongoing extradition and mutual legal assistance cases, and received 1,328 new cases. By 1996, the number of ongoing cases handled by OIA had more than doubled to 6,139, and the number of new cases received had increased to 2,051. In contrast, the number of attorneys on staff in OIA dwindled from 41 in January of 1995 to only 36 by October of 1996. As a consequence, OIA attorneys have worked longer, harder, and with better technology, but the demands placed on those attorneys is fast approaching critical mass. Moreover, OIA's ability to effectively handle the ever increasing number of important, time-sensitive cases, is now endangered.

If the present trend continues, the gap between the work required of OIA and the resources provided to do it will continue to expand. Recently, the Senate Foreign Relations Committee and the full Senate gave their advice and consent to ratification of 12 new extradition and mutual legal assistance treaties. Once those new treaties enter into force--which is likely to take place later this year--the number of international extradition and mutual assistance cases handled by OIA will take another significant upward leap. For example, OIA estimates that there are at least 100 fugitives from U.S. justice currently residing in the Philippines--many of whom are wanted for serious violent crimes such as murder. As soon as the new extradition treaty with the Philippines enters into force, OIA will begin the legal and documentary work necessary to seek the extradition of those fugitives. Meanwhile, in addition to the 12 treaties awaiting ratification, six more such treaties are either ready for signature or are almost completed, and dozens more either are, or soon will be, in the process of negotiation.

In order to effectively handle the increasing demands on its resources, and particularly those created by the Department's fight against terrorism, the Division is requesting two attorney positions to assist with the increasing role of the Office in international terrorism.

Overseas Positions

The Division has been tasked by the Attorney General to expand its presence overseas. In response to this mandate, the Division is requesting three attorney positions to be placed in select overseas embassies to provide much needed support in vital regions. To best address the threat of terrorism, and to ensure effective worldwide coverage, the Division requests funding to place attorneys in Manila to support East Asia, Brasilia to support South America, and Athens to support the Middle East. Without additional resources in 1998, the Division will be unable to place attorneys in these locations.

The Department is becoming more aware of the value of having our attorneys stationed at embassies in foreign countries. Our attorneys in Rome and Brussels have proved extremely valuable. With a Division attorney in Brussels, the U.S. has been able to keep abreast of developments in the European Union—to an extent previously impossible. In addition, because an OIA attorney is stationed in Brussels, the Department was represented in the pre-meeting for the G-7 Ministerial Conference on Terrorism in Europe. This enabled the Division to establish contacts and brief the Attorney General for the conference in a thorough and comprehensive manner. The Division's attorney in Rome has been invaluable in facilitating cooperation between U.S. and Italian prosecutors and police in dealing with the mafia and organized crime cases, as well as a number of other cases.

Deep country or region specific in-house expertise, which goes beyond extradition and mutual assistance law to include identifying all manner of international law enforcement issues and devising appropriate short and long term strategies, is currently lacking. Yet as the Attorney General's international role increases, the need for such expertise also grows. Legal cooperation with the Department's peers in the foreign justice and interior ministries cannot be supported by State personnel.

Although the number of law enforcement personnel (e.g., FBI Legats, DEA country reps) stationed abroad continues to rise, their important work is limited to law enforcement issues. This personnel does not have the training or expertise to provide substantive legal guidance on treaty matters, or to answer questions regarding the rendering of evidence or extraditing a fugitive from a country where we don't have an extradition relationship to one where we do. The increasing number of sophisticated legal issues that involve the United States are referred to OIA's attorneys. An on-the-ground U.S. legal presence in a foreign country can more quickly and effectively ensure the extradition of major U.S. fugitives, the acquisition of evidence which will be admissible in U.S. courts, and the successful coordination of U.S. law enforcement policy with respect to both the host country and the region.

OIA attorneys located overseas will complement domestic efforts by serving as liaisons with foreign prosecutorial and Justice Ministry authorities, and as legal advisors to the growing number of U.S. law enforcement personnel (e.g., FBI Legats, DEA Country Reps, etc.) stationed abroad. As such, it is a priority of the Division to ensure that the placement of our personnel is closely coordinated with other DOJ components.

Multi-Lateral Issue Team

The Division requests seven positions (3 attorneys, 2 analysts, 1 paralegal, and 1 clerical) to create a new Multi-Lateral Issue Team to be placed in the Office of International Affairs (OIA). OIA was originally created to handle bilateral criminal matters

C-24

(including treaty negotiations) and case-related issues. However, the Department has become increasingly involved in important multi-lateral fora. This involvement has become increasingly important given the international enforcement effort against transnational crime. OIA has provided the necessary support from its existing resources, but as work in this area increases, it has become a heavier burden. We believe that based on our input and experience to date, OIA is the appropriate place for the Department's multi-lateral activity to be centered. Examples of the types of multi-lateral work include:

- Work on the UN's international criminal court initiative;
- Work on the UN Crime Control Congress;
- Work on the war crimes tribunal(s);
- Organization of American States treaty negotiations;
- Work on the Dublin Group;
- Work on the European Union Caribbean initiative;
- INTERPOL (OIA currently provides a senior attorney who acts as the USNCB's General Counsel); and,
- Participation in studies of transnational organized crime and terrorism resulting from the Economic Summit of the P8 (includes the U.S., the U.K., Japan, Italy, France, Germany, Canada, and Russia).

A number of senior attorneys are spending an increasing percentage of their time participating in multi-national, multi-lateral crime fighting initiatives. These attorneys draw upon existing staff to support their efforts. However, prior to their involvement in these multi-lateral matters, these attorneys and support staff were already fully occupied with the traditional work of OIA cases and bilateral treaty matters. The Division requires additional resources to ensure that we neglect neither our traditional bilateral enforcement role, nor our new multi-lateral responsibilities.

In addition, the U.S. belongs to both the G7 and P8 groups consisting of Japan, the United Kingdom, Germany, Italy, Canada, France and the U.S. (the P8 also includes Russia). In 1997, the U.S. will take its turn as President of the G7/P8. While

economic leadership is the focus, the leaders of these nations realize that terrorism and crime have a profound impact upon the economic stability of the world. Thus, law enforcement matters constitute a substantial portion of every summit agenda.

G7/P8 conferences have been the source of numerous task forces including the Financial Action, Organized Crime, and the Precursor Chemical Task Forces. At the 1995 G7 Summit in Halifax, the nations resolved to send their representatives to a ministerial conference on terrorism which was held in 1996. Following the recent bombing in Saudi Arabia, President Clinton urged that terrorism, because of rampant terrorist activity, required further attention. His resolve was adopted by the G7 leaders who directed a ministerial working group on terrorism to develop a list of concrete recommendations similar to those proposed by the G7/P8 International Organized Crime Task Force.

The Attorney General chaired the American delegation to a ministerial meeting in Paris which set new action steps to combat international terrorism. These newly designated anti-terrorism efforts are to be launched beginning as early as February of 1997. In anticipation of U.S. leadership, the U.S. will be assuming the lead in the Terrorism G7.

The Deputy Attorney General anticipates that over half of the substantive agenda during the U.S. Presidency of the G7/P8 will be devoted to terrorism related activities. Due to its current role and expertise, the Criminal Division will be heavily relied upon to provide a substantial portion of the support to the U.S. President as he undertakes the leadership of the G7/P8. To ensure that we successfully meet the demands of the work generated by this initiative, OIA will need to deploy additional staff and resources.

Consequently, OIA proposes to establish a small multi-lateral team to complement its existing geographic team structure. The team will provide support to senior policy makers, participate in issues that cut across existing geographical team boundaries, staff the presidency of the G7/P8, and ensure continuity in the professional staff.

Analysis Unit

The Division is requesting an increase of nine positions (4 analysts and 5 paralegals) to make structural changes, requested by the Attorney General, to its Office of International Affairs (OIA). Due to the increasing international nature of crime, the Department frequently requests the Division to provide comprehensive reports regarding foreign countries and international issues. The Division needs additional resources to:

- Create a Unit that will collect, organize, and critically analyze all sensitive international law enforcement information and provide senior managers within the Department with such information upon request;
- Produce and provide any necessary briefing materials on international matters; and,
- Develop the capability to spot emerging trends and stay abreast of rapidly changing country priorities.

The Division has been asked to develop an internal capability to provide thorough and reliable information on a full-range of matters of Departmental interest regarding priority countries in the international community. The Unit will serve as a pro-active liaison group for reaching out to, and collecting information from, other components within DOJ, other Federal agencies, the National District Attorneys Association (NDAA), the National Association of Attorneys General (NAAG), and the law enforcement community. Working groups will be formed with these components and agencies to ensure that all appropriate international information is collected by the Unit.

OIA already serves as the Department's principal point of contact on our most important international criminal matters-- extradition, mutual legal assistance, and the negotiation of international treaties and agreements. In the United States, OIA attorneys have developed excellent relationships with U.S. Attorney's Offices, state prosecutors, law enforcement agencies (both DOJ and non-DOJ), the State Department, and other outside agencies. Overseas, OIA attorneys have developed close working relationships with ministries of justice and interior, police agencies, magistrates, and personnel at U.S. embassies. OIA is uniquely positioned to most effectively elicit the kind of cooperation and information sharing necessary to acquire the even broader expertise and analysis the Department requires.

	Perm. Pos.	FTE	Amount
Litigation Support			
1997 Enacted	178	178	\$20,796

1998 Estimate	200	193	23,217
Increase/Decrease	22	11	1,393

Base Program Description: Staff of this decision unit focus on the following objectives:

- Training of prosecutors and law enforcement officers in the terms of the Indian Gaming Regulatory Act, the National Indian Gaming Commission's regulations, and changes in case law, as well as providing advice and support to the United States Attorneys' Office and coordinating investigations in these matters.
- Managing, within the constraints of law and Department policy, the effective use of such investigative tools such as electronic surveillance, witness security and relocation, threats against prosecutors, covert activities involving Federal prisoners and protected witnesses, and authorization of witness immunity.
- Approving or disapproving requests for Witness Security Program services, coordinating related activities among the various agencies relating to the Program, and coordinating all movements and activities of the witnesses.
- Directing the enforcement of a limited number of statutes where considerations of logistics or other requirements dictate centralization.
- Developing, coordinating, and implementing, through litigation, nationwide policies and programs regarding the seizure and forfeiture of the assets and profits of criminals and criminal groups.
- Coordinating, on a national level, the simultaneous investigation of money laundering organizations with the goal of dismantling the organizations, prosecuting the principals, and seizing their assets.

- Assisting U.S. Attorneys' Offices in litigating forfeiture cases where specified circumstances exist.
- Assisting the Solicitor General by preparing draft briefs in opposition, merits briefs, and petitions for certiorari.
- Assisting United States Attorneys by presenting oral arguments and writing briefs, rehearing petitions, and mandamus petitions in the courts of appeals.
- Conducting systematic evaluations of major law enforcement programs (to include internal Division activities/programs).
- Facilitating the exchange of information with other public agencies and private institutions in the field of law enforcement.
- Developing, in cooperation with other federal justice agencies, legislative proposals, legal memoranda, and statements to be given before Congress by officials of the Department.
- Enhancing police and investigative capabilities throughout Latin America, the Caribbean, Haiti and the Newly Independent States (Russia).

Accomplishments:

- During the past year, Appellate Section attorneys have handled pretrial proceedings in three cases of national importance: the Oklahoma City Bombing prosecution of Timothy McVeigh and Terry Nichols; the Unabom prosecution of Theodore Kaczynski; and the fraud prosecution of the Montana Freeman. Section attorneys have drafted most of the briefs filed in each case and have argued many of the pretrial matters. The Appellate Section has also taken the lead in briefing and arguing appellate cases construing the new Anti-Terrorism and Effective Death Penalty Act, which restricts habeas review of final convictions. The Section provided a draft brief in *Elker v. Turpin*, the first Supreme Court case construing the statute, and it has filed briefs and argued cases still pending before several courts of appeals. Section attorneys have also limited the damage caused by the Supreme Court's decision last term in *United States v. Gaudin*. In that case, the Court reversed prior precedent holding that materiality is a legal question for the trial judge rather than a fact question that must be submitted to the jury. *Gaudin* placed at risk many false statement convictions in which the element of materiality was not submitted to the jury. The Supreme Court and the courts of appeals are now considering the question of whether a *Gaudin* error can be harmless. The Appellate Section has briefed this issue for several courts and has played a leading

role in formulating the Department's legal strategy on the issue.

- In 1996, the Office of Enforcement Operations (OEO) was successful in increasing the effectiveness of several of its programs and in enhancing responsiveness to requests for services and/or review. For example, the Office 1) increased access to the International Prisoner Transfer Program for federal inmates and established uniform criteria for deciding which inmates ought to be permitted to transfer; 2) provided a high-quality and timely review of electronic surveillance requests despite an almost 30 percent annual increase in such requests from 1992 to the present--the quality of these reviews has been instrumental in achieving an almost zero rate of suppression for wiretap orders challenged in federal court; 3) streamlined and tightened the review process for the Witness Security Program (WSP) to ensure that the WSP is utilized only in those cases where absolutely necessary, resulting in a reduced number of applications approved; 4) worked closely with the Attorney General's Advisory Committee and the Executive Office for United States Attorneys to develop the Emergency Witness Assistance Program, which was subsequently approved by the Attorney General; 5) provided a problem-solving service for federal, state, and local law enforcement officials relating to problems in the use of electronic surveillance laws; and 6) in conjunction with sponsoring law enforcement agencies and the Immigration and Naturalization Service, developed and implemented the S Visa Program for applications for non-immigrant status for foreign witnesses and informants. The Office is also responsible for responding to Freedom of Information Act (FOIA) and Privacy Act (PA) requests on behalf of the Division and was successful in reducing the case backlog in these areas by more than 60%.
- Over the last year, the Asset Forfeiture and Money Laundering Section (AFMLS) made significant progress in implementing the Attorney General's call to reinvigorate the forfeiture program. The Section assessed the concerns of the Department's components and, in February 1996, provided program reinvigoration recommendations to the Attorney General and the Deputy Attorney General. As a result, several initiatives were undertaken including 1) the dissemination of reinvigoration guidelines to the investigative agencies and U.S. Attorneys; 2) the utilization of forfeiture as a tool against the drug-smuggling activity along the southwest border; and 3) the development of training seminars for federal criminal prosecutors and agents that provide information necessary for them to pursue forfeitures successfully. AFMLS continued its efforts to promote world-wide asset forfeiture cooperation and reciprocal asset sharing. For example, the Section assisted Colombia in drafting its forfeiture laws that were recently enacted. The Section has continued to advocate and facilitate the transfer of forfeited property to those countries who have provided assistance to the United States in a variety of matters. In the area of money laundering, AFMLS represented the Department at the historic Hemispheric Conference on Money Laundering which took place in December 1995 in Buenos Aires. The Conference

resulted in a Ministerial Communiqué which set forth a series of steps the countries agreed to take to fight money laundering.

- The Office of Policy and Legislation (OPL) conducted a variety of studies, prepared reports, and presented recommendations to senior management on topics of special interest to the Division, the Attorney General, and the Administration. For example, the Office 1) summarized youth violence statistics and juvenile crime trends and participated in numerous interagency groups examining various aspects of youth violence, including a working group that drafted proposed legislative amendments to the Federal Juvenile Delinquency Act; 2) developed an initiative to strengthen public safety in Indian Country (in cooperation with the Child Exploitation and Obscenity Section) by improving federal and tribal criminal justice capabilities and holding serious offenders accountable, especially in the areas of violent crime and child abuse; 3) evaluated the Short-Term Witness Security Program and recommended changes to streamline program operations; 4) conducted an in-depth study of the Russian banking and finance system and the Russian export/import and customs regimes, focusing on how they are being used by Russian organized crime; 5) established an in-house computer capability to collect and analyze criminal justice-related data from a wide variety of sources in order to inform Division and Department policy decisions; and 6) handled all Criminal Division responsibilities related to the production of Prisoner Impact Assessments (PIAs), which estimate the effects on federal prison space and costs of proposed and enacted legislation.

Program Changes:

	Pos.	FTE	Amount
Electronic FOIA	22	11	\$1,393

This initiative seeks to:

Increase the Division's capability to address the growing number of requests for access to Criminal Division records under the Freedom of Information Act (FOIA) and Privacy Act (PA), implement the requirements of the recently enacted Electronic Freedom of Information Act Amendments of 1996 (E-FOIA), and help address the existing backlog of FOIA and PA requests in the Division.

The Division is requesting 22 positions (3 attorneys, 13 paralegals, 1 specialist, and 5 clericals), 11 workyears, and

\$1,393,000 in order to handle the ever-increasing workload in processing FOIA and PA requests. If approved, the resources necessary for FY 1999 will amount to 22 positions, 22 workyears, and \$2,241,000.

Based on its increased workload over the past two years, the requirements of the new E-FOIA, and the existing backlog of cases in the Division's FOIA/PA Unit, additional resources are necessary to enable the Division to respond quickly and efficiently to new FOIA and PA requests, continue to reduce existing backlogs, and implement the substantial changes required by the new E-FOIA.

The Division's FOIA/PA Unit, in the Office of Enforcement Operations, normally receives about 1,300 FOIA/PA requests each year. In 1995, the Unit received 1,961 requests, and in 1996 it received 1,603. Two factors that contributed to these increases are: 1) the efforts of the President and the Attorney General to make government more open and responsive to inquiries, and their related activities to publicize this openness; and 2) a substantial increase in Criminal Division responsibilities with the addition of two new units, the Executive Office for the Organized Crime and Drug Enforcement Task Forces (EO-OCDETF) and the International Criminal Investigative Training and Assistance Program (ICITAP). We anticipate that these factors will cause the higher level of requests to continue over the coming years, and that the new E-FOIA will also generate a substantial increase in the overall number of requests received each year.

In addition to generating more requests, the E-FOIA will impose substantial new procedural requirements. There are several provisions of the E-FOIA which are vague and will result in substantial litigation work for the FOIA/PA Unit. As a result, the Division requests three attorney positions to handle the litigation, administrative appeals and negotiations generated by Sections 1, 6, and 7 of the E-FOIA. Procedurally, the E-FOIA requires that requests be processed in specific ways not previously required. The Division must begin to capture information in a new case tracking system to furnish additional information to Congress in annual reports. New multi-track processing regulations were authorized, as were new requirements for expediting certain requests and for negotiating with requestors when deadlines cannot be met. The Division is requesting thirteen paralegal positions and one clerical position to help implement the requirements of Sections 4, 5, and 7 of the E-FOIA. The Division is also requesting one computer specialist to provide daily assistance to the FOIA/PA Unit in its efforts to implement the automation necessary to comply with the E-FOIA.

1998 Estimate	98	108	12,446
Increase/Decrease

Base Program Description: Staff of this decision unit focus on the following objectives:

- Supervising the development and implementation of Department policy to ensure the effective, fair and consistent administration of federal criminal laws.
- Establishing priorities and providing general supervision on the national enforcement of federal laws.
- Developing and implementing policies relating to the efficient administration of the Division.
- Providing administrative services necessary to the operation of the Division.

Accomplishments:

- The Office of the Assistant Attorney General continued to provide the federal criminal justice system with national leadership, centralized coordination, and effective direction. The role of the Assistant Attorney General (AAG) manifests itself in communications imparted to other governmental entities and, by extension, to the public. The AAG's Office represented the Criminal Division on proposals transmitted within the Department, with other Federal agencies, and to Congress, and presented the Division's position regarding the changes which are needed to improve the criminal justice system. The AAG's Office enhanced overall coordination and cooperation through communications with other law enforcement executives (federal and non-federal), in speeches, meetings, and correspondence on the most pressing problems facing the criminal justice system, and the means available through law enforcement programs to address emerging problems.

- The Division's Office of Administration supported over 750 attorneys, professionals, and clerical employees in the litigating Sections/Offices. Over the last year the Office provided support for the Division in the areas of personnel, budget preparation and execution, procurement, computer support services, security, facilities, records management and mail. In these areas, the Office continued and/or commenced a number of initiatives which have streamlined existing operations. For example, the Office utilized automation to streamline a number of administrative areas in order to provide increased service to the Division. The Office has introduced automation in areas such as procurement, travel, case-tracking, and correspondence control to increase efficiency and provide more accurate and timely information and service. In addition, the Office continued to enhance the capability of law enforcement by developing new litigation support services. For example, the Office continued to expand its use of Geographic Information Systems (GIS) technology to support law enforcement at both the federal and local levels. GIS allows law enforcement personnel to visually display a variety of geographic/topographic information such as where crimes occur, where defendant residences are located, and even the escape routes taken by criminals; it also facilitates the analysis of crime trends and the development of tactical responses to region-specific crime. This technology has enormous potential to simplify complicated spatial constructs and clearly portray the location and proximity of events leading to a crime, or a series of crimes.

<p>A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.</p>	<p>Since its formation in April 1968, the Narcotic and Dangerous Drug Section (NDDS) has exercised supervisory jurisdiction of those statutes pertaining to controlled substances. The Section's current responsibilities include the development and implementation of domestic and international narcotics law enforcement programs and policies, and the provision of direct litigation support to the Organized Crime Drug Enforcement Task Force (OCDETF) and High Intensity Drug Trafficking Area (HIDTA) programs, to the Southwest Border and other multi-agency initiatives, and to U.S. Attorneys nationally in recusal matters or in cases where the Section's expertise is requested. NDDS attorneys represent the Department in developing and administering other cooperative drug enforcement strategies, initiatives, and projects conducted by the law enforcement and intelligence communities, including the National and International Drug Control, Crack Cocaine, Methamphetamine, Heroin, and Marijuana Strategies. The Section Chief and Section supervisory attorneys serve as the Department's designated representative on several senior-level committees of the intelligence and law enforcement communities that plan and coordinate joint international counter-narcotics initiatives and other sensitive law enforcement activities. Additionally, the Chief acts as the designated representative of the U.S. Government in the implementation of the joint U.S.-Republic of Colombia evidence sharing initiative, intended to facilitate the successful investigation and prosecution of major Colombian narcotics traffickers in Colombia. NDDS plays a central coordinating role in a number of multi-district, multi-agency initiatives and prosecutions, including the Southwest Border Initiative (SWBI), the Department's priority narcotics enforcement program targeting major Mexican trafficking organizations.</p> <p>The Organized Crime and Racketeering Section (OCRS) coordinates the Department's program to combat organized crime. The principal enforcement efforts are currently directed against traditional groups such as La Cosa Nostra families and emerging groups from Asia and Europe, such as Chinese Triads, the Sicilian Mafia, and Russian Organized Crime. The Section supervises the investigation and prosecution of these cases by Strike Force Units within U.S. Attorneys' Offices in 21 federal districts having a significant organized crime presence. These cases involve a broad spectrum of criminal statutes, including extortion, murder, bribery, fraud, narcotics, and labor racketeering. The Section is involved in setting national priorities for the organized crime program by coordinating with investigative agencies such as the Federal Bureau of Investigation (FBI), the Drug Enforcement Administration (DEA), and others, and by working with the Attorney General's Organized Crime Council, which is ultimately responsible for the Federal Government's policy in this area. In addition to its close supervision of all federal organized crime cases, the Section maintains close control over all government uses of the RICO statute and provides extensive advice to prosecutors about the use of this powerful tool. In a more specialized context, the Section also provides support for criminal prosecutions which involve labor-management disputes, the internal affairs of labor unions in the private sector, and the operation of employee pension and welfare benefit plans.</p>
<p>B. Factors Affecting FY 96 Program Performance.</p>	<p>Reorganization - In September 1996, Congress approved a reorganization of the Division to create the new Computer Crime and Intellectual Property Section within the White Collar Crime decision unit. This Section was created with resources from the General Litigation and Legal Advice Section, which has ceased to exist. The remaining resources and responsibilities have been transferred to other Sections/Offices of the Division.</p>
<p>C. Factors Affecting Selection of FY 97 and FY 98 Targets.</p>	<p>During FY 1997, the Division is developing measures to assess the percentage of defendants convicted in organized crime and narcotics cases. In addition, the Division is developing measures to assess the percentage of requests for legal advice and expertise met by established deadlines. FY 1997 and FY 1998 targets are based on the Criminal Division's assessment of workload trends for the future.</p>

<p>A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.</p>	<p>The Fraud Section coordinates the federal effort against fraud and white-collar crime. The Section mainly conducts investigations and prosecutions of national significance or great complexity and assists United States Attorney's Offices with cases where requested or when U.S. Attorneys request themselves. The primary focus centers on complex frauds that involve multi-district and international activities; financial institutions; government programs and procurement procedures, especially health care provider and defense procurement fraud; the securities and commodities exchanges; the insurance industry; and schemes that involve multi-district consumer victimization, such as telemarketing. The Section develops policy for the Department through the staff of the Attorney General's Council on White-Collar Crime. In addition, the Section chairs a variety of interagency working groups to better coordinate the substantive fields previously mentioned and trains agents and prosecutors through its participation in conferences and other fora.</p> <p>The Public Integrity Section oversees the federal effort to combat corruption through the prosecution of elected and appointed public officials at all levels of government. The Section has exclusive jurisdiction over allegations of criminal misconduct on the part of federal judges and also monitors the investigation and prosecution of election and conflict of interest crimes. Section attorneys prosecute selected cases against federal, state, and local officials, and are available as a source of advice and expertise to other prosecutors and to investigators. Since 1978, the Section has supervised the administration of the Independent Counsel provisions of the Ethics in Government Act.</p> <p>The Child Exploitation and Obscenity Section (CEOS) prosecutes violations of the federal criminal statutes relating to sexual exploitation of minors, child support and obscenity. Under these statutes, the Section prosecutes those who possess, manufacture, or distribute child pornography; those who sell, buy or transport children interstate or internationally to engage in sexually explicit conduct; those who travel interstate or internationally to sexually abuse children; those who sexually abuse children on federal and Indian lands; those who do not pay certain court ordered child support payments; and those who transport obscene material interstate or foreign commerce either via the mail, common carrier, cable television lines, telephone lines or satellite transmission. Section attorneys also assist United States Attorney's Offices (USAOs) in investigations, trials, and appeals related to these statutes. Additionally, CEOS attorneys provide advice on victim-witness issues, and develop and refine proposals for prosecution policies, legislation, governmental practices and agency regulations in the areas of sexual exploitation of minors, child support and obscenity for USAOs, the United States Customs Service, United States Postal Service, and FBI.</p> <p>The Computer Crime and Intellectual Property Section (CCIP), newly formed in September 1996, is responsible for implementing the Department's Computer Crime Initiative, a comprehensive program designed to address the growing global computer crime problem, including cyberattacks on critical information systems. Section attorneys work with other government officials, the private sector, academic institutions, and foreign representatives to develop a global response to the increasing threat of computer crime. Section attorneys, who resolve unique issues raised by emerging computer and telecommunications technologies, litigate cases, provide litigation support to other prosecutors, train Federal law enforcement personnel, comment upon and propose legislation, and coordinate international efforts to combat computer crime.</p>
<p>B. Factors Affecting FY 96 Program Performance.</p>	<p>Reorganization - In September 1996, Congress approved a reorganization of the Division to create the new Computer Crime and Intellectual Property Section within the White Collar Crime division unit. This Section was created with resources from the General Litigation and Legal Advice Section, which has ceased to exist. The remaining resources and responsibilities have been transferred to other Sections/Offices of the Division.</p>

C. Factors Affecting Selection of FY 97 and FY 98 Targets.

During FY 1997, the Division is developing measures to assess the percentage of defendants convicted in White Collar Crime cases. In addition, the Division is developing measures to assess the responsiveness of White Collar Crime component in fulfilling requests for legal advice and assistance. FY 1997 and FY 1998 targets are based on the Criminal Division's assessment of workload trends for the future.

C-

A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your program.

The Office of International Affairs (OIA) supports the Department, the U.S. Attorney's Offices, and state and local prosecution by coordinating international legal matters and policy, and by acting as the U.S. Central Authority for making all requests for international extradition and mutual legal assistance, both to, and from, the United States. OIA also serves as the Department's liaison to foreign law enforcement and prosecutorial entities including foreign ministries of justice, police offices and embassies. In concert with the Department of State, the Office is responsible for the negotiation of bilateral extradition and mutual legal assistance treaties, and the formulation of country specific and regional law enforcement strategies. OIA also participates in international organizations such as the United Nations, and the G7/78 Groups, and provides assistance to the development of multilateral treaties, studies, and similar efforts regarding international law enforcement issues.

The mission of the Terrorism and Violent Crime Section (TVCS) is to design, implement, and support law enforcement efforts, legislative initiatives, policies and strategies relating to international terrorism, domestic terrorism and domestic violent crime in coordination with other federal, state, and local law enforcement agencies, as well as appropriate foreign counterparts. This includes direct participation in the investigation and prosecution of particularly critical terrorism cases as well as in selected domestic violent crime cases. In the international arena, TVCS, working in partnership with the U.S. Attorney's Office for the District of Columbia, investigates and prosecutes extrajudicial acts of terrorism, occurring anywhere in the world, that impact significant U.S. interests. TVCS provides logistical support and advice relative to the establishment of the Alien Terrorist Removal Court and is responsible for coordinating the development and presentation of appropriate cases to that court. TVCS develops, directs, and implements the federal enforcement program to address domestic terrorism. TVCS is involved in the development, implementation, and administration of nationwide programs, such as the Anti-Violent Crime Initiative, designed to upgrade violent crime enforcement efforts generally and to address evolving violent crime problems. The Section undertakes the investigation and prosecution of selected domestic violent crime cases where appropriate due to the importance of the particular case, its multidistrict nature, or the inability of a U.S. Attorney's Office to handle the case because of a lack of expertise or refusal. Additionally, TVCS supports the efforts of field prosecutors through the provision of a broad range of legal and policy advice and assistance. TVCS provides staff support for the Death Penalty Review Committee which considers whether to seek the death penalty in appropriate cases. Pursuant to the Department of Justice Crisis Response Plan, TVCS serves as a central coordinator for the receipt and dissemination of information pertinent to ongoing critical law enforcement incidents. Additionally, TVCS develops and coordinates crisis response preparation and training, concerning for example weapons of mass destruction, in coordination with other federal agencies.

The Internal Security Section (ISS) supervises the investigation and prosecution of cases affecting national security, foreign relations, and the export of military and strategic commodities and technology. The Section has exclusive responsibility for authorizing the prosecution of cases under criminal statutes relating to espionage, sabotage, subversion, and atomic energy. ISS provides legal advice to U.S. Attorney's Offices and investigative agencies on all matters within its area of responsibility, which includes 88 federal statutes affecting national security, and coordinates criminal cases involving the application of the Classified Information Procedures Act. The Section also administers and enforces the Foreign Agents Registration Act of 1938 and related disclosure statutes.

The Office of Special Investigations (OSI) detects and identifies persons who participated in the persecution of civilian populations sponsored by the Nazis or their allies during World War II, and is responsible for all denaturalization and deportation cases involving identified persons. In the denaturalization cases, U.S. Attorneys customarily assign AUSAs to serve as co-counsel, but they rely on OSI to handle all of the investigative work and virtually all of the litigation work. OSI is also responsible for the investigation of would-be immigrants or naturalization applicants suspected of involvement with the Nazis.

<p>B. Factors Affecting FY 96 Program Performance.</p> <p>Reorganization - In September 1996, Congress approved a reorganization of the Division to create the new Computer Crime and Intellectual Property Section within the White Collar Crime decision unit. This Section was created with resources from the General Litigation and Legal Advice Section, which has ceased to exist. The remaining resources and responsibilities have been transferred to other Sections/Offices of the Division.</p>	<p>C. Factors Affecting Selection of FY 97 and FY 98 Targets.</p> <p>During FY 1997, the Division is developing measures to assess the percentage of defendants convicted in international decision unit cases. In addition, the Division is developing measures to assess the percentage of requests for legal advice and expertise met by established deadlines. FY 1997 and FY 1998 targets are based on the Criminal Division's assessment of workload trends for the future.</p>

<p>A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.</p> <p>The Office of Enforcement Operations (OEO) oversees the use of the most sophisticated investigative tools at the Department's disposal, including electronic surveillance and the Federal Witness Security Program (WSP). The Office provides U.S. Attorneys' Offices and the various Criminal Division components with a wide range of prosecutorial support services, including 1) reviewing all federal electronic surveillance requests; 2) reviewing and authorizing requests to apply for court orders permitting the use of video surveillance; 3) authorizing or denying the entry of all applicants into the WSP; 4) coordinating and administering requests for United States prisoners relating to all aspects of the WSP; 5) administering the International Prisoner Transfer Program; 6) coordinating requests for United States prisoners to testify in foreign countries; 7) supervising the mechanism by which federal law enforcement officers or agents employed by the several offices of the Inspectors General may become Special Deputy U.S. Marshals; 8) coordinating requests to immunize witnesses, subpoena attorneys, or search the offices of attorneys who are suspects or targets of an investigation; and 9) serving as the Victim-Witness Assistance Coordinator for the Criminal Division, to ensure that victims and witnesses receive the rights and benefits to which they are entitled. In addition, the Office of Enforcement Operations provides legal advice to federal, state, and local law enforcement agencies on the use of the federal electronic surveillance statutes, and assists in developing Department policy on emerging technologies and telecommunications issues. The Office also assists, upon request, in the drafting of reply briefs involving electronic surveillance issues. Finally, the Office responds to requests made for disclosure of information under the Freedom of Information Act and the Privacy Act.</p> <p>The Asset Forfeiture and Money Laundering Section (AFMLS) is a recently created section within the Criminal Division representing a merger of the former Asset Forfeiture Office and the Money Laundering Section. The Section provides centralized management for the Department of Justice's Asset Forfeiture Program to ensure its integrity and maximize its law enforcement potential, while also providing managerial direction to the Department's components involved in money laundering issues. The Section initiates, coordinates, and reviews legislative and policy proposals impacting on the Asset Forfeiture Program and money laundering enforcement and serves as the Department's primary contact for Congress, other Executive Branch agencies, and state and local law enforcement agencies. The Section works with the entire spectrum of law enforcement and regulatory agencies using an interagency, interdisciplinary and international approach. The Section is mandated to: 1) coordinate multi-district investigations and prosecutions; 2) provide guidance, legal advice and assistance with respect to asset forfeiture and money laundering investigations and prosecutions; 3) develop regulatory and legislative initiatives; 4) ensure the uniform application of forfeiture and money laundering statutes; 5) litigate complex, sensitive and multi-district cases; and 6) provide litigation assistance to U.S. Attorneys' Offices and Criminal Division components. The Section oversees asset forfeiture and money laundering training; conducts seminars for federal prosecution, investigating agents, and law enforcement personnel; and produces legal publications and training materials to enhance its legal support functions. In addition, the Section adjudicates all petitions for remission or mitigation of forfeited assets in judicial forfeiture cases, administers the Weed and Seed Program, the Equitable Sharing Program, and oversees the approval of the placement of forfeited property into official use by federal agencies. (continued)</p>									

³ The Division is currently developing measures to assess performance in this area.

<p>A. Definitions of Terms or Explanations for Indicators: (Continued)</p> <p>The Appellate Section prepares draft briefs and certiorari petitions for the Solicitor General for filing in the U.S. Supreme Court; makes recommendations to the Solicitor General as to whether further review is warranted on adverse decisions in the district courts and courts of appeals; prepares briefs and argues cases in the courts of appeals; and briefs and argues motions in district courts in cases of national importance. Section attorneys assist U.S. Attorneys in preparing briefs for the courts of appeals and provide advice on the Antiterrorism and Effective Death Penalty Act, the Commerce Clause, the recent adverse Supreme Court decisions in <i>Balot</i>, <i>Gaudin</i>, and <i>Stanley</i>, and a variety of other legal issues. In addition, the Appellate Section acts as counsel to the Division's Assistant Attorney General and Deputy Assistant Attorneys General, providing legal advice on a wide range of issues and cases.</p> <p>The Office of Policy and Legislation (OPL) analyzes policy and management issues relating to criminal justice enforcement and makes recommendations to senior managers in the Division and the Department. The Office is involved in projects that require contact with U.S. Attorneys Offices, federal investigators, and other law enforcement officials. The Office develops legislative proposals, legal memoranda, and Congressional testimony; and prepares comments on pending and proposed legislation affecting the federal criminal justice system. It works closely with the U.S. Sentencing Commission and provides legal support to the Advisory Committee on Criminal Rules and Evidence of the Judicial Conference regarding the Federal Rules of Criminal Procedure and the Federal Rules of Evidence.</p>	<p>B. Factors Affecting FY 96 Program Performance. Describe reasons for any significant differences between target levels of performance and estimates of actual performance, whether positive or negative.</p> <p>Reorganization - In September 1996, Congress approved a reorganization of the Division to create the new Computer Crime and Intellectual Property Section within the White Collar Crime decision unit. This Section was created with resources from the General Litigation and Legal Advice Section, which has ceased to exist. The remaining resources and responsibilities have been transferred to other Sections/Offices of the Division.</p> <p>C. Factors Affecting Selection of FY 97 and FY 98 Targets.</p> <p>During FY 1997, the Division is developing measures to assess the percentage of defendants convicted in Appellate and Asset Forfeiture & Money Laundering cases. In addition, the Division is developing measures to assess the responsiveness of the Litigation Support Decision Unit to requests for advice, analysis and assistance. FY 1997 and FY 1998 targets are based on the Criminal Division's assessment of workload trends for the future.</p>

Congressional Appropriation Actions on 1997 Request: Congress did not approve \$1,372,000 requested to restore ended base funding for Automated Litigation Support and foreign counsel services, and denied \$6,664,000 for increases.

Recommendations: This reprogramming transfers \$1,000,000 to the Commercial Litigation Branch from the Torts Branch so that urgently-needed Automated Litigation Support services can be acquired to support the government's defense of its largest Court of Federal Claims cases. The transfer will also assist in covering costs associated with transcripts and litigative consultants in big cases which will be tried in the Court of Federal Claims in the near future. In addition, it transfers \$1,004,000 to the Federal Programs Branch to bring its budget authority in line with trends in actual expenses. This reprogramming has been approved by OMB and the Congress.

Transfer from SLIC Resolution Fund: This transfer will fund costs associated with litigation arising from the enactment and implementation of the Financial Institutions Reform, Recovery and Enforcement Act. The cases are unprecedented in terms of amounts claimed as well as their size and complexity.

Court of Federal Claims Litigation

The Civil Division requests a program increase of 70 positions, 65 workyears and \$10,972,000 to provide staffing and Automated Litigation Support (ALS) for some of its largest Court of Federal Claims cases. Of this request, the Commercial Litigation Branch requires 68 positions, 63 workyears and \$10,815,000 for the processing of cases. The remaining 2 positions, 2 workyears and \$172,000 are required to ensure effective management of this significant increase in ALS contract services.

CIVIL DIVISION

Mission

The Civil Division represents the interests of the United States, its constituent organizations and its officials and employees, in any civil or criminal matter within its responsibility and pending in any court, federal or state, which is not otherwise assigned to any other Department of Justice litigating division. It seeks to ensure that the Federal Government speaks with one voice with respect to its view of civil law while serving the diverse interests of the client agencies it represents. This balance is gained by either personally handling or by coordinating and monitoring all litigation within the Civil Division's purview.

Organizational Goals and Key Performance Information

The Civil Division's goals, as well as highlights of achievements which exemplify the impact of the Civil Division's success, follow:

Goal: To prevail on behalf of the United States in civil litigation in defense and in assertion of federal programs and policies.

- **Religious Freedom Restoration Act.** The Religious Freedom Restoration Act (RFRA) is intended to restrict the government from infringing on the free exercise of religion. It has been challenged in many contexts -- prisoners wanting special religious diets, collective bargaining disputes and more. In *Flores v. City of Boerne*, the archbishop of San Antonio contended that the City's refusal to permit expansion of a small, overcrowded church in a historic district violated the Act. The City of Boerne argued that RFRA is unconstitutional and violates the separation of powers doctrine. The circuit court agreed with the Civil Division's arguments, and found the Act to be constitutional. The case will be argued in the Supreme Court in 1997.
- **Antiterrorism.** The Antiterrorism and Effective Death Penalty Act, enacted in April 1996, will strengthen the battle against terrorism by giving the government authority to exclude or deport suspected foreign terrorists. The Civil Division's recent high-profile cases are significant not only for the international interest generated, but also for the constitutional issues addressed in the Antiterrorism statutes defended. These cases include efforts to extradite one of the international leaders of the World Trade Center bombing, a motion picture depicting the Oklahoma City bombing criminal case, *Terry Nichols v. Reno*, the ability of the Attorney General to recommend appropriate punishment for terrorists was upheld due to the successful efforts of the Civil Division.

- **Combatting Violence.** The Brady Handgun Violence Prevention Act is intended to stop felons from buying handguns by requiring a five-day waiting period and a background check. The Civil Division has defended the Brady Act against numerous constitutional challenges, arguing that Congress has the right to order background checks because of its authority to regulate commerce. Opponents have argued that the background check infringes on states' sovereignty. The Supreme Court is expected to issue its decision in 1997 in two Brady cases. Also, five attempts to invalidate the semiautomatic assault weapons ban imposed by the Crime Act of 1994 have been successfully defeated by the Civil Division.
- **Child Safety.** Cosco, a leading manufacturer of children's beds and accessory guardrails, violated the Consumer Products Safety Act for three years by failing to report to the Consumer Product Safety Commission numerous accounts of children falling from the beds. One toddler died, and the beds, risking possible strangulation. The Civil Division obtained a civil penalty of \$725,000 against Cosco.
- **Government Shutdowns.** The Civil Division successfully opposed two emergency motions for temporary restraining orders during the government shutdowns. Had the orders been granted, law enforcement, air traffic, public health and other emergency government services would have been curtailed, resulting in devastating losses to the public.

Goal: To recover money owed to the United States by prevailing in civil actions involving fraud, loan default, misuse of benefit and grant programs, contract default and unsatisfied judgments.

- **Health Care Fraud.** \$417 million was recovered in two recent health care fraud settlements: \$255 million from American Health Care of Georgia for fraud against the Medicare system and \$182 million from Laboratory Corporation of America for unnecessary blood tests billed to Medicare and other programs. Since 1987, the Civil Division, in concert with the U.S. Attorneys, has recovered a total of \$1.4 billion -- including \$50 million to whistleblowers -- in health care fraud cases.
- **Medicare Secondary Payer.** A \$25.7 million recovery was secured from 67 Blue Cross/Blue Shield companies -- a matter initiated by the companies and settled before court filing. This settlement brings total Civil Division recoveries in Medicare Secondary Payer litigation to \$88 million.
- **Contract Dispute.** The Civil Division obtained a \$32.6 million judgment against Sunitip Company, which had defaulted on forest service contracts in the mid-1980's and had resisted paying damages for over 10 years.

Goal: To protect the U.S. Treasury against unwarranted monetary claims by winning lawsuits and obtaining favorable settlements.

- Hughes Aircraft. The Civil Division prevailed in the Court of Appeals for the Federal Circuit (CAFC) when Hughes sought \$4 billion for compensation for the government's use of certain satellites which embody a patented control system. The CAFC affirmed the \$114 million judgment from the Court of Federal Claims.
- Boeing. \$1.2 billion was defeated, with no loss to the Treasury, in Boeing v. U.S. Boeing alleged that the Air Force improperly terminated the major portion of its contract to deliver air defense systems for Saudi Arabia.
- Asbestos Litigation. The asbestos manufacturer GAF Corporation voluntarily dismissed, with prejudice, its \$1.3 million suit. This success brought to a close the five-year, multi-front litigative campaign by the asbestos products industry, which had successfully attempted to shift approximately \$40 billion of their tort liability onto the federal taxpayers.

Goal: To promote statutory reforms that make civil laws understandable and meaningful to the American people.

- Civil Justice Reform. Executive Order 12988 -- Civil Justice Reform -- was signed by the President on February 5, 1996. The Civil Division had a lead role in developing the Order which requires agencies to use clear language and legal standards when writing legislative proposals and regulations. The Order also recommends the use of alternate dispute resolution and settlement conferences to resolve civil claims involving the U.S. Government.

Federal agencies are developing pro bono programs in compliance with this Order. The Civil Division has encouraged each of its employees to volunteer for 50 hours per year. Pro bono coordinators surveyed employees for interests and special skills, held a pro bono orientation program, and regularly notified employees of new pro bono opportunities. Civil Division employees worked on a variety of pro bono legal matters including child custody, abuse, mediation, dispute resolution, wills and appeals.

The Civil Division asserts the interests of the U.S. taxpayers by recovering monies and defeating unwarranted claims far in excess of its operating budget.

- Affirmative Awards. \$730 million was recovered for the government in court-imposed awards and negotiated settlements in personally and jointly handled cases disposed in 1996.

- **Collections.** While many awards and settlements require long-term servicing, collections of \$732 million, including \$746 million in cash deposits, were secured in 1996 from cases retained by the Civil Division or worked in conjunction with the U.S. Attorneys.
- **Defense Against Monetary Claims.** Defensive cases resolved in 1996 sought payouts by the government of \$3.2 billion. The Civil Division defeated 94 percent of these claims, with government losses held to \$510 million.
- **Litigation Success.** Civil Division attorneys prevailed in 91 percent of the trial and appellate cases decided by the courts in 1996.

External Factors

The Civil Division has limited control over the cases it receives. The majority of cases it retains -- cases filed in national courts (Court of Federal Claims, Court of Appeals for the Federal Circuit, Court of International Trade), cases filed in foreign courts and claims filed in connection with the Radiation Exposure Compensation Act or the National Childhood Vaccine Injury Act -- fall within the Civil Division's exclusive jurisdiction.

The remaining minority of cases are retained for reasons of economy or the need for a unity of approach. Issues of economy may relate to expertise or technological support that can most feasibly be provided by the Civil Division. Unity of approach is critical when cases (or families of cases) of national scope threaten to erode new laws, undermine law enforcement efforts or syphon huge sums of money from the U.S. Treasury.

Most of the Civil Division's cases are defensive -- requiring the Division to respond or face sanctions. The court determines the pace of the Division's litigation when it sets trial dates and discovery schedules. These factors are the major determinants of the Civil Division's work.

Increase/Decrease

Base Program Description

The Appellate Staff represents the interests of the United States at the highest levels of judicial review. The Staff's broad and varied litigation responsibilities include constitutional issues of individual liberties, issues of societal and collective rights exercised by the government and issues affecting national security and executive authority. The Staff handles appeals on behalf of all Civil Division components and the U.S. Attorneys Offices, as well as cases appealed directly from administrative agencies, although responsibility may be delegated to other litigating components. This arrangement provides centralized jurisdiction over appellate litigation and ensures uniform treatment of issues affecting the government.

Cases involving enormous financial stakes, new laws, major initiatives or controversial issues are often appealed and become part of the Appellate Staff's caseload. These suits include constitutional challenges to major legislation such as the recent challenges to the Prison Litigation Reform Act enacted last April. The Religious Freedom Restoration Act, the Communications Decency Act, the Violence Against Women Act and the Brady Act also have been the subject of major constitutional challenges. Legal challenges to the executive decisions and administrative policies that direct government programs -- for example, the Immigration and Naturalization Service's enforcement and interdiction policies and the Food and Drug Administration's authority to protect the public -- are handled by the Staff. In other cases, such as the landmark physician-assisted suicide litigation pending in the Supreme Court, the Staff serves as a "friend of the court."

Nearly 60 percent of the Appellate Staff's 1996 caseload was affirmative, involving government appeals of adverse judgments at the trial court or administrative level. In defensive cases, the Staff represents the government in appeals initiated by opponents who were unsuccessful in lower courts. Attorneys routinely draft memoranda to the Solicitor General and brief federal appeals. In addition, the Staff prepares and presents oral arguments before the Supreme Court and briefs federal court petitions, writs, and motions. The Staff also prepares documents for the Supreme Court, such as certiorari petitions, briefs in opposition to certiorari and merits briefs. In 1996, Supreme Court and certiorari petition litigation comprised nearly 40 percent of the Staff's workload.

In 1996, the Appellate Staff handled 2,023 cases. Attorneys spent the majority of their time, about 77 percent, litigating cases in 1996. In its role as the government's expert in court of appeals litigation, the Staff also devotes significant time to advising and assisting Civil Division litigating branches, the U.S. Attorneys Offices and client agency counsel in drafting appellate briefs and preparing oral arguments. On average, each attorney handled 36 cases and reported 26 days of unpaid overtime during 1996. The total overtime hours reported translate into six additional work years for 1996.

Case receipts are expected to grow ten percent between 1996 and 1998. Contributing to this increase are cases filed as a result of the Supreme Court's decisions in *Adarand*, which addresses agency affirmative action programs and activities, and in *Seminole*, which raises serious questions as to the constitutionality of provisions in bankruptcy law, copyright law and other federal statutes. Because of the scope of these decisions, these cases are expected to be resource-intensive. Significant litigation also is expected as a result of the recently-enacted welfare reform legislation and the statutory changes to Title VII of the Civil Rights Act of 1991. Amendments to the Equal Access to Justice Act should also contribute to workload increases as will litigation targeting the Line Item Veto Act.

Accomplishments

The Staff measures its success in protecting federal programs by tracking its win record in the court of appeals. In 1996, the Appellate Staff prevailed in 81 percent of its personally and jointly handled court of appeals cases decided by affirmations, reversals or judgments. Additionally, the Staff achieved a 70 percent win record in cases decided by affirmations and reversals (ACFR). Additionally, the Staff achieved a 70 percent success by the percent of memoranda recommending appeals of adverse judgments with which the Solicitor General agreed. This performance standard was achieved in 1996 when the Solicitor General agreed with 90 percent of the Staff's memoranda. The following victories are among the Staff's notable accomplishments:

In *"Megan's Law"* litigation, Attorney General of New Jersey and *Rod V. Foris*, the Staff participated in the successful defense of New Jersey's statute intended to protect children by requiring registration and community notification concerning released sex offenders. The Staff is participating in cases in Washington, New York and Connecticut that raise similar challenges to those states' *"Megan's Law"*.

In a key welfare reform case, *C.K. v. New Jersey Department of Human Services*, the Staff upheld a waiver granted by the Secretary of Health and Human Services allowing the State of New Jersey to implement its Aid for Families with Dependent Children (AFDC) Family Development Program. Among other features, this pilot program caps the amount of AFDC benefits by declining to provide increased benefits on the basis of additional children born while the recipient was receiving AFDC benefits.

Continuing litigation over the 1990 census resulted in several Staff victories. The Supreme Court accepted the Staff's position in *U.S. Department of Commerce v. City of New York* and ruled that the Secretary of Commerce's decision not to adjust the 1990 census to correct alleged undercounts was within his discretionary authority. In *National Law Center on Homelessness and Poverty v. Michael Kantor*, numerous cities and mayors challenged the Census Bureau's Shelter and Street Count operation, an initiative to count homeless persons at pre-identified street and shelter locations. The D.C. Circuit agreed that this action was foreclosed by the Supreme Court's decision in *Franklin v. Massachusetts* -- an earlier successful defense by the Staff.

Increase/Decrease	\$833

Base Program Description

Large-scale claims of alleged government neglect or wrongful conduct predominate the cases handled by the Torts Branch. Often, the government's involvement in the event triggering the suit is elusive. These suits frequently involve substantial monetary damages, hundreds of plaintiffs, massive discovery requirements, protracted trial schedules and arcane subject matter. When combined with the actions initiated by the Branch to recover injury and damages to government property, billions of dollars are at issue.

The enactment of the National Childhood Vaccine Injury Act and the Radiation Exposure Compensation Act (RECA) provided the Torts Branch with the former to create a program which incorporated elements of alternative dispute resolution and established an Office of Special Counsel to assist with Federal Claims to determine entitlement decisions. The latter law created a function much more akin to an administrative claim program than to litigation. (For details, see the RECA Trust Fund Budget.)

In 1996, the Torts Branch had a caseload of 3,614 cases (exclusive of RECA claims). Attorneys spent the majority of their time, over 85 percent, litigating cases. The remaining time was spent advising client agencies and the U.S. Attorneys Offices. On average, each attorney handled 25 cases and reported 43 days of unpaid overtime in 1996. The total overtime hours reported translate into over 24 additional workyears for 1996.

The Torts Branch is comprised of four sections: Aviation and Admiralty, Federal Tort Claims Act, Environmental Torts and Constitutional and Specialized Torts.

The Aviation and Admiralty Section (48 attorneys) handles cases arising from the aviation and maritime activities of the government. These are quintessential Torts Branch cases with the client being the government, the plaintiffs numerous and the discovery extensive. These suits range from maritime disaster and seaman's injury cases to commercial airline and private aircraft accident cases. National security interests are protected in cases related to military aircraft crashes, including the 1996 Air Force crash in Dubrovnik, Croatia (the "Ron Brown crash"), the 1994 "Friendly Fire Incident" over Northern Iraq and the 1992 OSPREY crash. In addition, affirmative actions to recover monies for government property damaged during maritime commerce, as well as the costs associated with maritime pollution cleanups, are an important portion of the Section's caseload.

Aviation/Admiralty Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	357	302	307	346	346

Through 1998, aviation case receipts are expected to increase. Additionally, as the statute of limitations approaches for several aviation accidents, additional cases are expected to be filed. The receipt projections for 1997 and 1998 may be conservative, depending on the number of cases filed relating to the May 1996 ValuJet crash in the Everglades and the July 1996 TWA crash off the coast of Long Island.

The Federal Tort Claims Act (FTCA) Section (34 attorneys) litigates a wide array of cases alleging government liability arising under the FTCA. The diversity of this caseload is noteworthy -- the 1996 caseload included claims ranging from federal regulatory activities associated with the banking industry to medical malpractice cases. AIDS-contaminated transfusions to hemophiliacs are the subject of multi-district liability litigation the Section is actively defending. Also, litigation alleging that a fatal disease is associated with human growth hormone treatment administered and funded by the National Institutes of Health is being handled by the Section.

FTCA Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	96	85	87	102	115

Through 1998, FTCA case receipts are expected to increase. Contributing to this growth are increased employee negligence program malpractice and medical malpractice cases. Additionally, the Federally Supported Health Centers Assistance Act of 1995 may cause a significant increase in case receipts.

The Environmental Tort Section (24 attorneys) handles environmental tort claims involving toxic waste, groundwater contamination and asbestos. The Section defends the government against claims for monetary damages resulting from alleged death, personal injury or property damage caused by environmental or occupational exposure to toxic substances. Cases involve injuries caused by air, surface water or groundwater contamination; construction programs; and environmental regulatory activity.

Environmental Tort Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	102	239	156	155	155

In 1995, a one-time filing of asbestos seamen's cases caused a surge in receipts. The non-asbestos torts, which equate substantially more time and from litigation expenditures have been filed on behalf of over 400 people seeking over \$2 billion. Working closely with the Department of Energy, which pursued an aggressive settlement initiative, the Section reached early resolution of 13 matters. The remaining radiation experiment cases, which include class actions and are likely to involve extensive document searches from the last 50 years, will require a significant investment of resources, as reasonable settlements are determined for worthy claimants.

The Constitutional and Specialized Torts Section (41 attorneys, excluding RECA) handles claims filed under the National Childhood Vaccine Injury Act (CVA) and the Radiation Exposure Compensation Act, and Bivens suits, in which government employees are sued as a result of performing their official duties.

The CVA established the National Vaccine Injury Program to ensure the continued supply of vaccines by protecting the vaccine industry from potentially catastrophic lawsuits. In 1986, the program received over 4,200 vaccine injury claims. In 1995, there were 71 petitions filed in new petitions filed, likely reduced by the influx of claims from persons trying to avoid application of the updated Vaccine Injury Table effective March 1995 and as a result of the expected addition of Hepatitis B, Varicella and Hemophilus Influenza Type B vaccines to the Vaccine Injury Table in 1997.

While numerically smaller, the Bivens cases are a demanding component of the Section's caseload. These cases, which can be extremely controversial and time-consuming, generally arise when plaintiffs claim that government employees -- including law enforcement officers, Cabinet members, etc -- have violated the plaintiffs' constitutional rights. In 1996, this litigation included defenses of a U.S. Ambassador and top officials of the Office of the Comptroller of the Currency.

Constitutional/Specialized Torts Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
CVA Receipts	118	189	101	106	607
Bivens Receipts	55	58	38	52	54

Accomplishments

The Tort Branch measures its success by tracking the dollar value of claims defeated. During 1996, the Branch defeated 92 percent of dollar claims in defensive cases disposed. The Branch also achieved a goal of 90 percent under the Government Performance and Results Act (GPRA) and saving the Treasury nearly \$2 billion. The Vaccine Program terminated 31 percent of its caseload in 1996, surpassing its former target rate of 15 percent. The chart that follows documents the Branch's past performance and targets through 1998.

Nearly \$5 million was awarded in affirmative admiralty cases, ranging from damage to government cargo in *M/V IRON WORKER* to environmental pollution in *Santa Clara*. In aviation litigation, \$14 million in claims were defeated in *Aero Union* when the government was absolved of liability. Attorneys also used alternative dispute resolution to resolve claims against the government related to the midair collision in Stockton, California, and the 1990 crash of two Northwest Airlines aircraft at Detroit Metropolitan Airport.

In litigation filed under the FTCA, claims made in *McDaniel* were dismissed. The plaintiffs sought compensation for property damage caused by a southern pine beetle infestation that spread from federal wilderness land onto private land. In *Linsparde*, the plaintiff sought additional payments by the government for the death of a child. The defendant sought a settlement of the child's estate. The settlement became insolvent. The Court adopted the Branch's position that the United States had complied with its obligations under the settlement by purchasing the annuity and that an order requiring an additional payment would violate the FTCA's lumpsum provision.

In environmental tort litigation, the Supreme Court held in *Hercules* that in contracting to purchase Agent Orange during the Vietnam War, the federal government did not agree to indemnify manufacturers for any tort payments they might later make to those exposed to their products. Following this decision, the last Agent Orange plaintiff voluntarily dismissed its \$25 million complaint, thereby ending six years of litigation by members of the Agent Orange industry attempting to shift their tort liability costs onto federal taxpayers. In the cases *Elliott*, *Langstaff* and *Aragon*, over \$30 million in unwarranted environmental tort claims were dismissed.

In *Bivens* litigation, the Ambassador to Paraguay, Robert Service, was successfully defended from a claim by Investor's Resources, alleging that the Ambassador had made slanderous remarks about its business activities in Paraguay. In *Berger v. Hanlon*, Fish and Wildlife Service agents and an Assistant U.S. Attorney, who allowed CNW to film the execution of a search warrant on the plaintiffs' ranch, were successfully defended from the ranchowners' \$10 million suit.

In a significant vaccine appeal, *O'Connell v. Shalala*, the authority of the Secretary of the Department of Health and Human Services to make rules modifying the treatment of medical issues under the Vaccine Program was defended. This will enable the Secretary to promulgate additional regulations consistent with medical developments in the future. Additionally, the government has saved millions of dollars in the successful litigation of unwarranted claims alleging that the rubella vaccine caused the arthritic-like condition, fibromyalgia syndrome.

Program Increase

National Childhood Vaccine Injury Compensation Program		Amount
1997 Availability
1998 Base	...	\$ 833
1998 Estimate	...	\$ 833
Increase		\$ 833

In the past, the Civil Division has spent substantially more on its Vaccine Program than the amount authorized for reimbursement. By 1998, the program will cost \$4,861,000 compared with reimbursement authority of \$4,028,000. Continued subsidization of the Vaccine Program is not possible given the lack of growth in the GLA budget and the successive cost absorptions that have been levied on the litigating components. An increase of \$833,000 is required.

Three new vaccines are expected to be added to the Vaccine Injury Table in 1997, Hepatitis B, Varicella, and Hemophilus Influenza B. These additions could add 1,000 to 2,000 new claims over the next several years, with as many as 500 new claims expected in 1998. As a result, each attorney is likely to be assigned an average of 50 cases.

The sharp rise in expected cases underscores the need for full funding for the Vaccine Program. Absent an increase, hiring will be curtailed; staffing levels will fall; the backlog of cases will mount. An increase of \$833,000 is needed to ensure that cases are adjudicated timely and that only worthy claimants are compensated, preserving limited funds for deserving parties.

As an alternative to increasing the Civil Division base by the amount of the projected shortfall, the reimbursement authority could be increased to \$4,861,000.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

NAME OF DECISION UNIT: Civil Division -- Torts Branch						
GOAL: To protect the U.S. Treasury against unwarranted monetary claims by winning lawsuits and obtaining favorable settlements.						
Type of Indicator	PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS			
	Performance Indicators		1994 Actual	1995 Actual	1996 Actual	1998 Actual
Input	1. Number of cases pending beginning of year		4,077	3,457	2,925	2,357
	2. Number of cases received during year		728	893	689	1,281
Output/Activity	3. Number of cases terminated during year		1,348	1,425	989	1,009
Intermediate Outcome	4. Percentage of dollar claims defeated in closed cases		94%	95%	92%	90%
End Outcome	5. Dollars defeated (in millions)		\$2,480	\$3,623	\$1,755	\$2,021
Productivity/Efficiency	6. Total dollars defeated per attorney workyear (in millions)		\$16.6	\$24.1	\$12.9	\$15.9
	7. Percentage of Childhood Vaccine caseload terminated		23%	32%	33%	30%
A. Definitions of Terms or Explanations for Indicators:						
<ul style="list-style-type: none"> Indicators 1, 2 and 3: Case counts for these indicators were derived in a manner consistent with prior budget submissions and refer to personally and jointly handled cases. Indicator 1: The decline in the number of cases pending reflects the diminution of the backlog of Childhood Vaccine cases. Indicator 7: Caseload refers to the sum of cases pending at the beginning of the year and the number of new cases received during the year. 						
B. Factors Affecting FY 96 Program Performance:						
<ul style="list-style-type: none"> Indicator 3: The 1995 statistic includes an unusually high number of Childhood Vaccine terminations, which was the culmination of an accelerated preliminary review process implemented by the court in November 1993. In 1996, the number of Childhood Vaccine terminations returned to historical levels. Indicators 5 and 6: The decrease in 1996, when compared to 1995, reflects the decreased number of defensive terminations. In addition, these indicators are driven externally, by the monetary amounts asserted by the plaintiffs. Plaintiffs in the average defensive case closed in 1996 sought \$2.0 million, whereas the average sought in 1995 was \$2.8 million. 						

C. Factors Affecting Selection of FY 97 and 98 Targets

- Indicator 4: Torts suits are among the largest and most resource-intensive suits handled by the Civil Division. They can involve huge numbers of claimants, enormous collections of documentary evidence and lengthy time frames. The events precipitating these suits are largely exogenous to the Civil Division. However, as long as budget resources allow the Civil Division to maintain the infrastructure vital to the success of these massive cases, these performance targets should be attainable.
- Indicators 5 and 6: The targets are based on the average amount sought in defensive cases closed in 1994 through 1996.
- Indicator 7: In 1998, the influx of vaccine cases will necessitate a lower target termination rate.

	Perm. Pos.	FTE	Amount
Commercial Litigation			
1997 Appropriation Anticipated	309	319	\$69,880
1998 Base	309		\$78,811
1998 Estimate	377	382	\$89,626
Increase	68	63	\$10,815

Base Program Description

The Commercial Litigation Branch represents the United States in litigation arising from billions of dollars of buying, selling, lending and other transactions. In 1996, the majority of these cases, 83 percent, were defensive. The affirmative caseload involved actions to recoup for the government billions of dollars lost through fraud, bankruptcies and loan defaults. The total caseload during 1996 was 11,851 cases, a 20 percent increase over 1995. Over \$45 billion was at issue in the 1996 caseload.

In 1996, Commercial Litigation Branch attorneys spent over 90 percent of their time litigating cases. On average, each attorney handled 54 cases and reported 45 days of unpaid overtime during 1996. The total overtime hours reported translate into 38 additional workyears for 1996.

The Commercial Litigation Branch is comprised of five sections: Court of Federal Claims/Court of Appeals for the Federal Circuit/Court of International Trade (CFC), Fraud, Corporate/Financial, Foreign Litigation and Intellectual Property.

The CFC Section (106 attorneys) is the largest of the five sections and handles complex contract disputes brought in the Court of Federal Claims, as well as appeals to the Federal Circuit (CAFC) and claims brought in the Court of International Trade.

Included in the caseload are some of the Civil Division's most resource-intensive, high-stakes cases: the McDonnell Douglas A-12 Stealth Fighter case, the Alaska Pulp and Ketchikan Pulp timber claims, and the Bath Iron Works, Gunship and ISSM military contract disputes are just a few examples. Each of these cases is expected to place significant demands on resources through 1998. These cases epitomize the complex, fact-intensive nature of the litigation typically handled by the CFC Section. Many of these cases require the full-time attention of not just one or two attorneys, but whole teams of attorneys. For example, the A-12 case consumed 25 attorney workyears in 1996. A-12 will continue to demand significant attorney resources through 1998.

Concurrently, the Section is facing massive litigation associated with the 121 Wingstar savings and loan claims. The risk to the government, if these claims are lost, could exceed \$18 billion. These claims involve over 400 financial institutions throughout the United States, multiple government agencies, 60 opposing counsel and over one billion pages of potential government evidence. Discovery requirements for these cases are likely to surpass those of any other case ever encountered by the Civil Division.

400

Court of Federal Claims/Court of Appeals for the Federal Circuit/Court of International Trade: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Litigation Area					
CFC Receipts	681	912	678	734	816
CAC Receipts	738	804	526	780	780
CIF Receipts	876	1,536	2,804	2,919	2,919
Section Subtotal	2,295	3,252	4,008	4,533	4,515

Other CFC cases include bid protests, fraud counterclaims, conflicts arising under the takings clause of the Constitution and claims for relief under the Civil Liberties Act. In August 1996, the General Services Administration (GSA) bid protest jurisdiction was eliminated as a portion of the GSCA suite may be filed in the Court of Federal Claims and may further contribute to an increasing caseload.

Court of Appeals for the Federal Circuit litigation includes appeals from the Court of Federal Claims involving procurement and personnel matters; appeals of decisions rendered by the Merit Systems Protection Board (MSPB), agency contract appeals boards, and the Court of Veterans Appeals; and a limited number of appeals from federal district courts. In 1996, the combined caseload in the Court of Federal Claims and the CAFC totaled 2,902 cases.

This section also represents the United States in Court of International Trade cases (except those involving the International Trade Commission) and in subsequent appeals to the CAFC. Litigation involves disputes over import duties, trade agreements, tariff classification and valuation of imported merchandise, collection of import duties and a variety of other actions affecting the administration of the customs laws of the United States. The CIR caseload totaled 6,159 cases in 1996 -- a 56 percent increase over 1995. This significant growth resulted from filings protesting an increase in the harbor maintenance fee (HMF) and from the implementation of the Customs Modernization Act of 1993. It is expected that caseload in 1997 will be over 7,000 and that in 1998 will be over 8,000. The CIR also handles appeals from the Uruguay Round Agreements Act and the Customs Modernization Act of 1993. In 1996, the CIR received 1,000 international trade receipts of over 2,900 annually through 1998 -- nearly double the 1995 level.

With a caseload in excess of 9,000 cases, the CRC Section is pushing the limits of its current capacity. Each attorney is assigned an unprecedented number of cases -- an average of 85 cases per attorney. Not surprisingly, Section attorneys contribute extraordinary amounts of personal time to the job -- in 1996, the average attorney worked an average of 31 days a year per attorney. The 121 Winter cases are placing even further demands on the Section's strained resources.

Another rapidly expanding portion of the fraud caseload is comprised of cases filed on behalf of the Government by private citizens known as "relators," under the 1986 qui tam amendments to the False Claims Act. In return for exposing fraud against the government, relators are allowed to share in recoveries resulting from these cases. While constituting just four percent of the fraud caseload in 1989, qui tam cases comprised over 40 percent of the fraud caseload in 1996 and are expected to comprise a similar portion of the caseload through 1998.

Fraud Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	369	362	348	715	730

The corporate/financial caseload totaled 317 cases in 1996. While the Section in recent years has experienced a decline in banking cases involving receiverships and bankruptcies, receipts are expected to increase significantly in 1997 and 1998 due to an expected upsurge in bankruptcy filings by Medicare providers and electric cooperatives.

Corporate/Financial Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	116	108	75	113	135

The Office of Foreign Litigation (4 attorneys) represents the interests of the United States in foreign courts. The section is responsible for the representation of the United States in foreign courts and is headed by the Civil Division. The Office's jurisdiction is broad, covering the United States in lawsuits in 100 countries. Supervision of European litigation is conducted by an overseas office in London. In 1996, the majority of the Section's 1,217 cases -- 68 percent -- were defensive and covered a wide range of commercial and tort cases. Affirmative litigation involves financial and health care fraud, bid-rigging, student and medical school loan defaults, landlord-tenant matters and admiralty and shipping suits. The Office also conducts foreign asset searches, particularly in connection with financial institution cases.

Office of Foreign Litigation: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	214	232	257	275	290

The 1997 and 1998 receipt estimates are driven by labor suits expected to be filed by foreign national employees of international agencies and U.S. embassies in response to downsizing activities.

The Intellectual Property Section (14 attorneys) handles a wide variety of litigation involving patents, trademarks, copyrights, trade secrets and other related matters. These cases are extremely complex, requiring extensive technical and legal analysis of each asserted patent and each accused system or device. Attorneys defend the government in patent and copyright infringement suits, as well as in legal challenges to actions of the Register of Copyrights.

Affirmative litigation enforces government-owned patents, seeks to assign patents to the government for inventions arising from government-sponsored research, enforces patent indemnity agreements, cancels patents issued as a result of fraud and enforces the deposit requirements of the Copyright Law on behalf of the Library of Congress. In addition, the workload includes a variety of administrative proceedings before the Patent and Trademark Office. The Intellectual Property caseload totaled 97 cases in 1996.

Intellectual Property Section: 1994 - 1998

	Actual 1994	Actual 1995	Actual 1996	Est. 1997	Est. 1998
Receipts	25	42	33	32	34

Accomplishments

The Commercial Litigation Branch tracks the outcome of monetary claims to measure its success. In defensive litigation, the target is to defeat at least 75 percent of the amount sought in 70 percent of the cases resolved. In 1996, the Branch achieved this target while defeating \$6.2 billion in claims. Although the majority of this amount was defeated in two cases, the Hughes appeal and Boeing, over \$1.1 billion was defeated in other cases -- nearly a threefold increase over the 1995 total. In affirmative cases, the Branch won \$95 million in 1996. The chart which follows documents the Branch's past performance and future targets through 1998.

The Commercial Litigation Branch protected the Treasury against unwarranted claims and recovered money owed to the United States in a variety of recent cases:

Successes in CFC defensive litigation included \$88 million in a contract dispute filed by Ameriex against the Defense Logistics Agency, \$37 million in Wells Fargo Bank and a \$12 million in Massachusetts Bay Transit Authority. The CFC also won a \$10 million judgment in a contract dispute with the U.S. Army Corps of Engineers. The CFC also won a \$10 million judgment in a contract dispute with the U.S. Army Corps of Engineers. The CFC also won a \$10 million judgment in a contract dispute with the U.S. Army Corps of Engineers.

More than \$318 million in fraud recoveries -- including \$22 million for relators -- was secured in 1996 by the Branch working in conjunction with U.S. Attorneys. Successful procurement fraud settlements included a \$555.7 million agreement with Philips Electronics North America Corporation to settle claims that Philips the government improperly tested electronic devices used in a number of military and aerospace systems. The corporation paid \$10.2 million to settle fraudulent overcharging claims on F-100 jet engines parts. This recovery was in addition to the \$19.5 million paid in 1995 to settle related claims. A \$13 million settlement from PMC Corporation resolved a qui tam suit alleging that inflated spending plans for bid proposals and research and development projects were submitted to the Army.

Over \$120 million was recovered in health care fraud cases in 1996, including \$11 million for relators. An additional \$11 million settlement for unnecessary blood tests was the result of a qui tam suit filed against Metpath, Inc., a laboratory in Westborough, Mass. A \$10 million settlement was secured from U.S. Surgical Corporation, a supplier of medical instruments and equipment. The company falsely certified to the Department of Veterans Affairs and the Defense Logistics Agency that it had provided the government with accurate information on its most expensive products. The company was fined \$10 million and given a permanent injunction against future fraud. The company also agreed to give discounts and more favorable terms to other customers.

Nearly \$420 million was secured in corporate/financial litigation in 1996, including \$237 million in SovLend, Power Cooperative, a settlement of a Rural Utilities Service claim, and \$41 million in Armada Realty, a Department of Housing and Urban Development mortgage case. Bankruptcy recoveries included an additional \$18.2 million in Pan American World Airways, bringing the total recovered in the case to over \$48 million. Student loans valued at \$5 million became enforceable when the court rendered judgment in the government's Shorger v. Riley. To defend against a \$1 billion claim in Tenaska, WA Partners II, the Branch successfully enforced Bonneville Power Administration's arbitration agreement.

Foreign litigation recoveries totaled \$8.5 million in 1996. Included was a \$2 million settlement from the collision of the Italian merchant ship PQ with the U.S. Navy's BOWDITCH in the Rio de Janeiro harbor and a \$1.1 million settlement for salvage services provided by the Navy tugboat BEAUFORT to two tankers which collided and caught fire in the South China Sea. In *U.S. v. Ivey*, the Court of Appeals for Ontario affirmed the recognition and enforcement of a \$4.6 million "Superfund" judgment. This is the first time that a foreign court has recognized and enforced a U.S. environmental judgment entered under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Program Change

	Perm. FTE	FTE	Amount
Court of Federal Claims Litigation			
Transfer from FSLIC Resolution Fund.....	\$33,700
Program Increase.....	68	62	10,815
Total.....	68	34	\$44,515

The Civil Division is defending claims arising from the enactment and implementation of the Financial Institution Reform, Recovery and Enforcement Act. The cases are unprecedented in terms of amounts claimed as well as their size and complexity. With a quelling trial schedule set for 1998 and expected to continue at least through the year 2000, a program increase of 68 positions (60 attorneys and 8 support staff), 63 FTE and \$10,815,000 is required to provide staff for an adequate defense and support for the support activities. Under the provisions of this litigation, the Civil Division is required to provide trial preparation, consultants and transcripts -- a transfer of \$33,700,000 is required from the FSLIC Resolution Fund.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

NAME OF DECISION UNIT: Civil Division -- Commercial Litigation Branch						
GOALS: 1. To protect the U.S. Treasury against unwarranted monetary claims by winning lawsuits and obtaining favorable settlements.						
2. To recover money owed to the United States by prevailing in civil actions involving fraud, loan default, misuse of benefit and grant programs, contract default and unspecified judgments.						
• Adequate funding will enable the Civil Division to meet its responsibilities for conducting litigation that should be retained centrally, while providing the requisite staff to use its responsibilities for monitoring cases.						
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target
Input	1. Number of cases pending beginning of year	5,691	5,840	7,130	9,521	12,370
	2. Number of cases received during year	3,019	3,996	4,721	5,658	5,764
Output/Activity	3. Number of cases terminated during year	2,870	2,706	2,330	2,809	2,932
Intermediate Outcome	4. Percent of defensive cases in which the Branch defeated 75 percent or more of the claim	78%	80%	70%	70%	70%
	5. Percent of affirmative dollar claims won	84%	95%	51%	80%	80%
End Outcome	6. Total amount of claims defeated (in millions)	\$4,296	\$393	\$6,201	\$704	\$706
	7. Total amount of relief awarded (in millions)	\$1,169	\$685	\$695	\$707	\$856
A. Definitions of Terms or Explanations for Indicators:						
• Indicators 1, 2 and 3: Case counts and dollar amounts for these indicators were derived in a manner consistent with prior budget submissions and refer to personally and jointly handled cases.						
• Indicator 6: The 1994 results included \$1.9 billion defeated in the trial of the Hughes patent case.						
• Indicator 7: The 1994 results included \$324 million awarded in the National Medical Enterprises (NME) fraud case.						
B. Factors Affecting FY 96 Program Performance:						
• Indicators 1, 2 and 3: The influx of harbor maintenance fee cases began in 1995 and continued in 1996. These cases have been stayed pending the outcome of the lead case. Thus, terminations are proportionately lower and the number of cases pending increased significantly.						
• Indicator 5: Includes Soyland Power Cooperative, a \$237 million settlement of a \$700 million restructured loan from the Rural Utilities Services. This recovery was well above the liquidation value of the utility's assets or the likely value achievable in a Chapter 11 reorganization. By avoiding bankruptcy, the government was able to collect a larger amount, and much sooner, than would have been possible under bankruptcy proceedings. Excluding the Soyland settlement, the percentage of affirmative dollar claims won in 1996 would have been 87 percent.						

<ul style="list-style-type: none"> ● Indicator 6: The 1996 results include \$3.9 billion defeated in the Hughes appeal and \$1.2 billion defeated in the Boeing contract claim. Excluding these mega-cases, over \$1.1 billion was defeated in Commercial Branch cases.
<p>C. Factors Affecting Selection of FY 97 and 98 Targets:</p> <ul style="list-style-type: none"> ● Indicators 1, 2 and 3: These targets assume that harbor maintenance fee cases will continue to be filed at the present rate and will be stayed, thereby contributing to a growing pending caseload. ● Indicator 6: The 1997 and 1998 targets are based on 1994-1996 data, exclusive of Hughes and Boeing which are considered outliers (i.e., significantly higher than the average claim defeated). The projections do not attempt to quantify the impact of the Winstar case family nor of the A-12 case. With respect to Winstar, estimates of dollars at issue have varied from \$2 billion to \$18 billion. Until the litigation unfolds and the kinds of damages and the extent of the damages are assessed, the projections will not include Winstar cases. With respect to A-12, no final disposition is expected until 1998 or beyond. ● Indicator 7: The 1997 and 1998 targets are based on 1994-1996 data, however, the \$324 million recovered from NME in 1994 is considered an outlier and was excluded. These targets reflect recoveries from health care fraud cases arising from the implementation of the Health Insurance Portability and Accountability Act of 1996.

Federal Programs			
1997 Availability	150	144	\$17,031
1998 Base	150	144	\$17,504
1998 Estimate	154	146	\$17,808
Increase/Decrease	4	2	304

Base Program Description

The Federal Programs Branch defends the officers and agencies of the United States Government in a wide variety of suits challenging the constitutionality and legality of federal statutes, programs and initiatives. While the vast majority of its cases are defensive, the Branch also initiates affirmative litigation to enforce federal laws and regulations.

High-visibility cases that present important constitutional, statutory and regulatory issues typify the Branch's cases. Recently, litigation has involved some of the most probing issues of our time -- gun control, welfare reform, separation of church and state, prison litigation reform and sexual harassment in the workplace. Currently, the Branch is defending the civil rights section of the Violence Against Women Act (VAWA). VAWA grants all persons the right to be free from gender-motivated violence and also grants the victims of such crimes the right to obtain civil remedies against their attackers.

Specialized statutes, such as the Freedom of Information Act, the Privacy Act, Title VII of the Civil Rights Act, the Americans with Disabilities Act, the Equal Pay Act and the Federal Advisory Committee Act are the subject of suits handled by the Branch. The defense of challenges arising under the Constitution, the Administrative Procedures Act and other statutes of general applicability comprise a significant portion of the caseload.

In affirmative litigation, federal statutes and regulations are enforced by initiating actions on behalf of federal agencies. The Branch represents agencies in civil actions to enforce the Ethics in Government Act against present and former federal officials, seeks judicial enforcement of Inspector General subpoenas and litigates civil penalty actions under a variety of federal statutes, including the National Highway Traffic Safety Act.

In 1996, 85 percent of the Branch's 883 cases were defensive. Attorneys spent the majority of their time, nearly 89 percent, litigating cases in 1996. The remainder of the attorneys' time was spent advising client agencies and the U.S. Attorneys Offices. On average, each attorney reported 31 days of unpaid overtime in 1996. The total overtime hours reported translate into more than 13 additional workyears for 1996.

Federal Programs cases are often labor-intensive. This caseload is expected to increase through 1998. Following the enactment of the Telecommunications Act of 1996, several suits were filed, charging that the "indecentcy" provision unconstitutionally limits free speech. While an unfavorable decision was appealed

directly to the Supreme Court, the Branch continues to defend the Act in such challenges. Cases against the Department of Housing and Urban Development are increasing, as are suits involving the defense of the Civil Rights Act of 1991.

Accomplishments

The Branch measures its success by tracking the number of closed trial cases in which federal programs and plaintiffs successfully defended, or remedies for statutory violations of federal programs were enforced. The viability of federal programs and the success of the Branch's target under the Government Performance and Results Act (GPRA). However, the full value of these successes is difficult to quantify as many Federal Programs suits seek declaratory and injunctive relief which indirectly affects billions of dollars in federal funds. The chart that follows documents past performance and targets through 1998. Recent successful defenses of federal statutes and policies include:

The incarceration of illegal alien prisoners was the subject of suits brought by the states of Washington and California. Plaintiffs claimed that the 1994 Crime Bill required the Attorney General to take custody of the states' illegal alien prisoners or to reimburse the states for the costs of their incarceration. The Federal Government was successfully defended, based on arguments that the Attorney General's duties were dependent upon adequate appropriations to pay for those activities.

In VAWA litigation, the court agreed with the Branch's arguments in *Doe v. Doe*, finding that Congress has authority to regulate interstate commerce and VAWA's civil remedies provisions are the substantial impact of gender-motivated violence on interstate commerce. Subsequently, the plaintiffs in *Doe v. Doe* sought a settlement to her VAWA claim. Although the court in *Brinkley v. Virginia Polytechnic Institute* held that the Act exceeded Congress' power under the Commerce Clause and the Fourteenth Amendment, the decision is being appealed.

Provisions of the Cable Consumer Protection and Competition Act of 1992 were defended against constitutional challenges by the cable television industry. In *Turner Broadcasting System v. U.S.*, after extensive discovery and fact-finding on remand from the Supreme Court, the district court upheld the Act's mandate that cable operators carry certain broadcast stations on their cable systems.

In *Alvaredo Community Hospital et. al. v. Shalala*, plaintiff hospitals sought several hundred million dollars because of a provision in the Medicare Act that provides for additional Medicare payments for outlier patients whose illnesses require an extraordinarily lengthy or costly hospital stay. The court accepted the Branch's argument that the statute requires outlier thresholds to be set in advance of each fiscal year, and makes no provision for retroactive adjustments if payments ultimately fall below the level specified.

Several foreign trading partners, including the European Economic Union, stated their intent to embargo all American wheat purchases unless the Department of Agriculture was able to certify its actions quarantining wheat affected by the kernal bunt fungus. The successful defense of the Department of Agriculture's actions prevented the embargo.

Consumer Litigation			
1996 Appropriation Anticipated	35	39	\$4,816
1998 Estimate	35	39	\$4,945
1998 Estimate	32	32	\$4,332
Increase/Decrease

Base Program Description

The Office of Consumer Litigation safeguards the public by enforcing federal consumer protection laws, such as the Food, Drug and Cosmetic Act, the Consumer Product Safety Act and the Federal Trade Commission Act. In particular, the Office seeks to safeguard consumers who are unable to protect themselves from dangerous or worthless products and from unfair and deceptive trade practices.

Consumer litigation is primarily affirmative. Many of these cases involve fraud perpetrated by manufacturers and distributors of unapproved drugs and medical devices. Others involve fraud that endangers unsuspecting consumers and exploits billions of dollars from them each year through adulterated and misbranded foods, hazardous and unsafe household products, automobiles with rolled-back odometers, unfair credit practices and deceptive advertisements and sales.

The reinvigorated enforcement efforts of the Office's largest client, the Food and Drug Administration (FDA), has changed the case mix. Affirmative cases are more labor-intensive and nationwide in scope. Rather than pursuing a high volume of small-time offenders, the FDA targets large corporations and industries that violate consumer protection statutes. Consequently, the FDA's opponents, who are very well-financed, contest enforcement to the highest levels of judicial review since their potential losses far outweigh even extensive legal costs. Defensive litigation -- when FDA policies are challenged in court -- has become extremely complex and resource-intensive.

The FDA's approach to tobacco enforcement exemplifies this trend. The FDA implemented regulations that will significantly limit children's access to tobacco and advertising that targets young people. The new regulations ban billboards for tobacco products within 1,000 feet of school grounds and playgrounds, ban cigarette vending machines in locations that minors are permitted, and limit advertising in youth-directed magazines. Before the new regulations even became final, several tobacco companies and advertisers sued the government; the Office of Consumer Litigation successfully defended their claims. Following the implementation of the regulations, the litigation burden on the Office continues to defend the government. This litigation has been and will continue to be lengthy, demanding and labor-intensive.

Other defensive litigation involves challenges to the FDA's food labeling and drug manufacturing requirements. The Office has defended numerous challenges to FDA's Health Claims Regulation in district and appellate courts. This regulation was promulgated under the Nutritional Labeling and Education Act of 1994, which requires health claims about foods and dietary supplements to meet scientific standards. In addition to the FDA, client agencies include the Federal Trade Commission, the National Highway Traffic Safety Administration and the Consumer Product Safety Commission.

In addition to litigating cases, the Office provides guidance on consumer protection law to various state and federal agencies. For example, under a current initiative, state motor vehicle agencies are provided with training and computer software to streamline odometer investigations. As a result of this effort, new odometer cases increased nearly fourfold between 1995 and 1996 and are expected to remain high through 1998.

Receipts totaled 212 cases in 1996, of which 185 were affirmative cases. The large number of affirmative case receipts was spurred by the revitalized enforcement efforts of the FDA. Through 1996, the complex, time-intensive, long-term cases are expected as a result of the FDA's change in enforcement philosophy.

The Consumer Litigation caseload totaled 641 cases in 1996, an average of 21 cases per attorney. Attorneys spent the majority their time, about 84 percent, litigating cases in 1996. Most of the remaining time was spent advising state and federal agencies and the U.S. Attorneys Offices. Attorneys reported an average of 49 days of unpaid overtime. The total overtime hours reported translate into six additional workyears for 1996.

Accomplishments

To measure its performance, the Office tracks the number of affirmative cases in which injunctive or monetary relief was obtained and the number of defensive cases in which an agency's policies or programs were defended. In 1996, the Office was successful in 96 percent of cases closed. In addition, \$19.4 million in criminal fines and civil penalties was obtained.

Several victories of national importance follow:

Ten million in criminal fines was secured after Warner-Lambert pleaded guilty to a felony violation of the federal Food, Drug, and Cosmetic Act. Warner-Lambert had fraudulently concealed from the FDA drug stability problems -- a tendency of the drug to break down chemically, leading to inconsistent strength. The drugs involved were a popular anti-seizure medication, Dilantin, as well as the thyroid medications Euthroid and Proloid, and an anti-Parkinsonism drug, Parsidol. While numerous generic drug manufacturers have been prosecuted, this was the first fraud conviction of a brand name pharmaceutical company.

The largest civil penalty ever collected for violations of a consumer protection administrative order, \$2.75 million, was paid by Bahlberg, Inc. in the Miracle Ear litigation. Bahlberg violated an FTC order that precluded falsely advertising that the Miracle Ear had the capacity to eliminate background noise and enable the hearing-impaired user to receive only amplification of conversational sounds.

A doctor was convicted of falsifying laboratory test results on food exposed to smoke and various volatile chemicals, thereby allowing over \$2 million worth of contaminated food to be released and sold to the public. The doctor is now serving a two-year prison sentence.

International drug counterfeiters who conspired to smuggle counterfeit and misbranded human and animal drugs into the United States from 1985 through 1991 were also brought to justice. Flavine International, Inc. and several individuals entered guilty pleas, including one defendant who was extradited from France and sentenced to 24 months in jail, a fine of \$1 million, and deportation upon completion of his sentence.

C. Factors Affecting Selection of FY 97 and 98 Targets:						
<ul style="list-style-type: none"> Indicator 4: Targets have been set at 85 percent due to the complexity of the Office's pending cases which may make it more difficult to achieve effective outcomes. Indicator 5: The Office raised its target termination rate from 24 percent to 29 percent. 						

	Perm. FOL	FTE	Amount
Immigration Litigation			
1997 Appropriation Anticipated	54	62	\$7,083
1998 Base	54	62	\$7,285
1998 Estimate	54	62	\$7,285
Increase/Decrease

Base Program Description

The Office of Immigration Litigation is the last line of defense along an immigration enforcement continuum that involves the Immigration and Naturalization Service (INS), the Immigration Courts, the Board of Immigration Appeals and the federal courts. By defending and enforcing the laws and policies regarding alien admission and removal and challenges to the government's immigration laws and policies, the Office of Immigration Litigation ensures that the combined efforts of the United States' immigration agencies come to fruition.

Immigration litigation involves both individual challenges to immigration enforcement actions, as well as class action suits directed against officers of the INS, the Department of State and other immigration-interested agencies. The Office also handles cases challenging the issuance and denial of visas and passports, the imposition of employer sanctions and the government's response to applications for naturalization, political asylum and other immigration benefits. Nearly 90 percent of the caseload involves petitions to the courts of appeals by individual aliens seeking to challenge determinations by immigration officers, immigration judges, and the Board of Immigration Appeals.

Challenges to exclusion, deportation and removal continue to be the Office's most significant cases in terms of volume. In 1996, this docket included 2,135 cases, as the INS and Executive Office for Immigration Review continued to apply greater emphasis and resources to the task of removing illegal aliens from the United States. This number represents an increase from the Office's 1991 challenges to exclusion, deportation and removal caseload. An increasing number of these cases involve aliens who have committed crimes in the United States.

Antiterrorism litigation comprises a growing aspect of the Office's mission. Efforts to extradite one of the international leaders of Hamas to Israel and a notorious Sikh terrorist to India are recent examples of this work. The deportation case against members of the Popular Front for the Liberation of Palestine continues as well. The Antiterrorism and Effective Death Penalty Act (AEDPA), which created an Alien Terrorist Removal Court, will give the government authority to exclude or deport suspected foreign terrorists. The Office has played an integral role in establishing operating rules and procedures for all aspects of the Removal Court process. It helps designate foreign terrorist organizations which are a threat to national security and identify suspected alien terrorist for the Removal Court, working with the Criminal Division, the FBI, the CIA, the Department of State and the Department of Treasury's Office of Foreign Asset Control.

Challenges to statutory reforms such as the 1986 "amnesty" and collateral attacks on INS enforcement actions constitute the most labor-intensive litigation by the Office. While accounting for only three percent of the total caseload in 1996, collateral attacks on the INS accounted for 32 percent of time reported.

Additionally, as a result of asylum and refugee initiatives and other administrative reforms, cases contesting the denial of immigration benefits have increased. Overall, the caseload totaled 2,319 cases in 1996.

A 40 percent increase in case receipts is projected between 1996 and 1998. This increase is expected as a result of Administration and congressional efforts to tighten immigration enforcement through the enactment of three major laws: the Violent Crime Control and Law Enforcement Act of 1994, the Antiterrorism and Effective Death Penalty Act of 1996 and the Illegal Immigration Reform and Immigrant Responsibility Act of 1996.

Attorneys spent most of their time, about 79 percent, litigating cases in 1996. The remainder of attorneys' time was mostly spent advising client agencies and the U.S. Attorneys' Offices. On average, each attorney handled 31 cases and reported 37 days of unpaid overtime in 1996. The total overtime hours reported translate into 11 additional workyears for 1996.

Accomplishments

The Office measures its success in preserving federal immigration policies by tracking the number of cases it wins. In 1996, the Office won 97 percent of the personally and jointly handled cases decided or dismissed by the courts, exceeding its 90 percent target under the Government Performance and Results Act (GPRA).

The Office has defended and enforced U.S. immigration policy in a variety of recent cases, including:

In a unanimous Supreme Court decision, *Yang v. INS*, the Court upheld the Attorney General's broad discretion to refuse to give a waiver of deportation to an alien who had obtained an immigrant visa by fraud. This important victory sends a strong signal that immigration authorities can make rules as they see fit in order to enforce the law that aliens must make truthful representations and have proper documents when they come to the United States.

The successful defense of the AEDPA, which limits the remedies available to aliens who are convicted of serious crimes, enables the INS to expel criminal aliens promptly upon completion of their prison sentences. In victories including *Euldylag, Sahchez-Rodriguez, Salazar-Harg*, and *Rolls*, the Office obtained judgments sustaining the provisions of the Act that preclude judicial review of a criminal's administrative order of deportation.

After the United States Coast Guard intercepted vessels smuggling Chinese aliens in the Pacific Ocean and off the Atlantic coast, the Office worked with the INS, the Department of Defense and the National Security Council to formulate plans to return the Chinese aliens, and created contingency litigation plans to defend the government's efforts in any lawsuits that might have been brought on behalf of those aliens.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

NAME OF DECISION UNIT: Civil Division -- Office of Immigration Litigation GOAL: To prevail on behalf of the United States in defense and assertion of federal programs and policies.							
PERFORMANCE INDICATOR INFORMATION			PERFORMANCE TARGETS AND ACTUAL RESULTS				
Type of Indicator	Performance Indicators		1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target
Input	1. Number of cases pending beginning of year		893	950	1,092	1,091	1,171
	2. Number of cases received during year		1,254	1,386	1,227	1,516	1,716
Output/Activity	3. Number of cases terminated during year		1,197	1,244	1,228	1,436	1,609
Outcome	4. Percent of cases won		96 %	98 %	97 %	90 %	90 %
A. Definitions of Terms or Explanations for Indicators:							
<ul style="list-style-type: none"> Indicators 1, 2 and 3: Case counts for these indicators were developed in a manner consistent with prior budget submissions and refer to personally and jointly handled cases. Case counts include cases appearing in the Violent Crime Reduction Budget GPRA table. Indicator 4: The percent of cases won is based on the number of cases that resulted in judgments or dismissals by the court. 							
B. Factors Affecting FY 96 Program Performance:							
<ul style="list-style-type: none"> All Indicators: The Office of Immigration Litigation's deep knowledge of immigration statutes and its ability to coordinate cases nationwide contributes to its success. 							
C. Factors Affecting Selection of FY 97 and 98 Targets:							
<ul style="list-style-type: none"> Indicator 2: The 1997 and 1998 targets assume that additional cases will be generated as a result of the infusion of Violent Crime Reduction Trust Fund resources and the Department's 1997 immigration initiatives. Indicator 4: Targets are not being raised above 90 percent because the effect of the new immigration statutes on the Office's performance is uncertain.

Base Program Description

The Civil Division defends the agencies and officers of the United States in suits challenging the constitutionality and legality of federal statutes, policies and regulations. The Civil Division handles up to 100 "clients" in a wide range of cases. The financial stakes associated with the current caseload are staggering, exceeding \$100 billion. The successful litigation of this broad, diverse and high-stakes caseload requires a responsive management structure capable of providing executive leadership and promoting productivity, performance and fiscal responsibility. The Management and Administration decision unit -- comprised of the Office of the Assistant Attorney General and the Office of Management Programs (OMP) -- serves this purpose, supporting thousands of cases annually.

The most direct way OMP fosters performance and efficiency is through its Automated Litigation Support (ALS) program. ALS provides a practical means of putting millions of pages of evidentiary documents at attorneys' fingertips. It consists of document screening, imaging, computerization and trial preparation services that are essential to the successful handling of the Civil Division's largest and most important cases. As the majority of ALS services are provided by contractor staff, ALS provides a flexible vehicle for responding to urgent litigation needs.

Information-retrieval functions are provided through OMP's automated legal research program and Centralized Records Management Programs (CRMP). The legal research program enables attorneys to access specialized data bases such as WESTLAW and LEXIS, which provide up-to-the-minute information on federal and state statutes, court decisions and the legislative activity of Congress. The CRMP assists attorneys by storing, monitoring and periodically updating the Civil Division's more than 257,000 case file sections.

Office automation is a key feature of the technological support provided by OMP. The first large-scale office automation system in the Department of Justice, AMICUS provides users with instant desktop access to word processing, electronic mail, on-line legal research, electronic calendars and spreadsheets, correspondence control and tracking systems and ALS and case management systems. These powerful office automation tools enable attorneys and support staff to enhance their efficiency and effectiveness through better organization and management of their work efforts. Further enhancements will be achieved in 1997, when AMICUS is converted to the Justice Consolidated Office Network (JCON). JCON will provide Civil Division attorneys and support staff with advanced word processing and spreadsheet capabilities, improved access to on-line legal research services and expanded facsimile and electronic mail capabilities.

Successful management of the Civil Division's burgeoning caseload is essential to ensuring efficiency in all stages of litigation. CASES, the Civil Division's automated case management system, maintains the basic data needed for management of over 403,000 open and closed cases. Through CASES, attorneys can access essential case-related information directly from their individual workstations, saving them countless hours of searching for voluminous physical case files. With only a few keystrokes, managers can search and update cases, monitor caseload activity and expenditures, trace litigation histories, analyze caseload trends and evaluate future resource requirements.

The provision of responsive administrative support services is just as crucial as the provision of technological support. These services include: recruitment, hiring, employee assistance and training, personnel tracking, labor relations, procurement, facilities management and provision of office equipment and furniture. OMP is coordinating the temporary relocation of the Civil Fraud and Appellate Staffs into "swing space" while the Main Justice Building undergoes renovation in 1997.

Sound fiscal management is another crucial OMP function. Each year, thousands of financial transactions are processed against a growing number of accounts under the Civil Division's purview. Once limited to the General Legal Activities account, budget formulation, execution and accounts maintenance functions have been expanded to include the MECA Trust Fund and administration accounts, the VCR appropriation, two Fees and Expenses of Expert Witnesses allotments and a host of reimbursable agreements. As the number of accounts has grown, so have the types of responsibilities which encompass fiscal management.

OMP provides a service to the general public, coordinating responses to nearly 2,500 congressional and public inquiries each year. In accordance with the Attorney General's commitment to make the Department of Justice "more open, responsive and accountable" to the American people, OMP is committed to providing timely, accurate responses to all inquiries. Having zeroed-out its backlog of citizen correspondence and achieved currency with respect to controlled congressional correspondence, the Civil Division's communications function has been singled out as an example of timeliness and efficiency for other Department of Justice components.

Accomplishments

ALS helped ensure the government's success in several high-profile cases which were closed in 1996, including *Boeing*, in which \$1.2 billion was defeated, and in *Dana and First Union*, in which combined multi-year recoveries were \$37 million. This program continues to provide discovery and trial support services indispensable to ongoing cases of unprecedented size and complexity -- A-12 and the *MINTEL* cases are examples.

OMP played a major role in the award of the JCON contract. In addition to chairing the Source Selection Evaluation Board which made the award recommendation, OMP staff debriefed disappointed bidders on the basis of the award. No protests were filed, a remarkable achievement considering the contract is valued at up to \$500 million.

On-line entry of timekeeping information represented a major enhancement to CASES. The feature eliminates the need for cumbersome daily time sheets.

OMP coordinated the permanent relocation of approximately 300 employees of the Commercial Litigation Branch and the Office of Management Programs to a new location at 1100 L Street, NW, with minimal interruption to litigation and administrative operations.

Program Change

	Perm. Pos.	FTE	Amount
Automated Litigation Support.....	2	2	\$157

The Civil Division is defending claims from the enactment and implementation of the Financial Institution Reform, Recovery and Enforcement Act. The cases are unprecedented in terms of amounts claimed as well as their size and complexity. With a gruelling trial schedule set for 1998 and expected to continue at least through the year 2000, the Civil Division will devote substantial contractor-provided resources to accomplish discovery and trial support. A program increase of two positions, two FTE and \$157,000 is required to provide staff vital to manage the contract services that will be acquired.

Environment and Natural Resources Division
Salaries and Expenses
Program Performance Information
Government Performance and Results Act Requirements

MISSION: To enforce civil and criminal environmental laws in order to protect the health and environment of United States citizens. The Division also defends environmental challenges to Government programs and activities and represents the United States in all matters concerning the protection, use, and development of the Nation's natural resources and public lands; wildlife protection; Indian rights and claims; and the acquisition of Federal property.

ORGANIZATIONAL GOALS:

1. Protect the natural environment and our citizens.
2. Enforce the law fairly and effectively to assure a clean environment.
3. Maintain and promote a sound level of statutory environmental protections.
4. Further the United States' trust responsibilities for Indian tribes.
5. Protect the public fiscal trust.
6. Make the Division work better with available resources.
7. Defend the government's pollution abatement programs.
8. Acquire federal land in a fair and efficient manner.

1998 Base	37	40		4,346
1998 Estimate	40	42		4,550
Increase/decrease	3	2		204

BASE PROGRAM DESCRIPTION: This decision unit includes two discrete sections: the Appellate Section and the Policy, Legislation and Special Litigation Section.

The Appellate Section of the Environment and Natural Resources Division is responsible for all appellate court matters in the Division except for petitions for review of EPA rules, which are handled by the Environmental Defense Section. Attorneys of the Appellate Section are lead counsel in 95 percent of its cases, and they work closely with the U.S. Attorneys and Division attorneys handling the remainder. In this Division, most cases on appeal involve specialized statutes and frequently involve challenges to decisions by high officials -- particularly in the Environmental Protection Agency and the Department of the Interior. Most work involves preparing briefs and oral arguments which lead to coordination of the positions of client agency staff and trial section attorneys, analysis of the bases for appeal, and securing permission from the Solicitor General's Office to appeal adverse decisions. The unit also prepares draft briefs for the Solicitor General.

The Policy, Legislation and Special Litigation Section (PLSL) advises and assists the Assistant Attorney General on policy issues. With the Office of Legislative Affairs, it coordinates and directs the Division's legislative program, including representing the Department on interagency groups that develop the Administration's position on legislation and at meetings with congressional staff. Other duties include: drafting speeches; monitoring and participating in citizen suits; responding to citizen mail, congressional and FOIA requests; and serving as the Division's ethics officers. PLSL attorneys also coordinate the Division's activities regarding international environmental matters and environmental justice matters. Too,

they litigate amicus cases and undertake other specially assigned litigation projects at the trial and appellate levels.

PROGRAM CHANGES:

	Perm. FTE	FTE	Amount
Appellate.....	\$...
Policy, Legislation and Special Litigation ..	1	2	204
Appellate & Policy	3	2	204

This increase seeks to address the following objectives:

1. Protect the natural environment and our citizens.
2. Enforce the law fairly and effectively to assure a clean environment.
3. Maintain and promote a sound level of statutory environmental protections.

The Environment and Natural Resources Division requests one attorney and two paralegals for 1998 to implement the newly-enacted Electronic Freedom of Information Act Amendments of 1996. The Amendments require substantial new efforts to improve and speed FOIA response. Of particular significance to this Division, the Amendments require a response in twenty days, absent unusual circumstances, and prohibit courts from granting so-called *Open America* stays on the ground that the agency's FOIA backlog prevents a timely response. Where the Division cannot meet the twenty-day deadline due to unusual circumstances, the Amendments require negotiation with the requester to either narrow the request or establish a reasonable response schedule.

The full scope of these and other new burdens will not be known until the meaning of the new language has been litigated. However, the Division presently is using its FOIA staff to maximum capacity, and has not been able to reduce its backlog. Our typical FOIA requests, which often are from litigants and in the nature of civil discovery, cannot now be timely processed, with existing resources. Absent additional staff, the new obligations imposed by the Amendments simply cannot be met.

Compliance with the new statute (particularly the elimination of the Open America doctrine) will require our FOIA attorneys to be involved to insure that the requests are properly interpreted and routed. We also anticipate significant new litigation from requesters who, in the past, have not sued due to the Open America doctrine, and over interpretations of the new language. Additional attorney time will be needed to assist with this litigation, to train Division personnel in their new obligations, and to evaluate applications for expedited handling, among other matters.

The additional paralegals are needed to assist in: managing and processing FOIA requests promptly; implementing the electronic FOIA search and computer redaction requirements; immediately assessing responsive document locations and estimating response times and responsive document volumes; and scanning documents into electronic format and indexing responses.

A. Definitions of Terms or Explanations for Indicators:	
•	Cases Won include cases in which we sought and obtained denial of certiorari. Also included are cases in which the Government prevailed in trial court and the opposition's appeal is withdrawn.
•	Cases Lost, conversely, include those cases where we sought certiorari but it was not granted.
•	"FOIA Backlog" is the number of requests that were not answered within 10 working days of receipt.
•	Amicus Requests are cases in which private parties or Citizens' groups request that the Government join them in pursuing a change to an adverse lower court ruling.
•	Speeches Prepared and Testimony Prepared Numbers for 1994 are "best guess" estimates.
•	Amicus Case Filings became a discrete category January 1995 when the Case Management System was modified. 1994 figures are "Best Guess" estimates.
B. Factors Affecting FY 96 Program Performance.	
Government shutdowns and budget uncertainty.	
C. Factors Affecting Selection of FY 97 and 98 Targets.	
•	Assumes approval of requested 1998 resources.
•	Almost by definition, Supreme Court cases are anomalies thus the Appellate Section cannot predict their number nor speculate as to a "win rate". Courts of Appeals cases on the other hand are far more frequent; accordingly, the Section is comfortable with targets involving them.
FURTHER NOTES: • Case closings in 1996 are disproportionately high because of a concerted effort to close our inactive case files.

Increase/Decrease	6	3	889

BASE PROGRAM DESCRIPTION: The Environmental Protection unit is comprised of the Environmental Crimes, Environmental Defense, and Environmental Enforcement Sections. While each is distinct, increasingly their work intersects.

The Environmental Crimes Section serves two primary purposes: the investigation and prosecution of criminal violators of federal environmental statutes and support of the work of USAOs and investigative agencies such as the EPA and FBI. In the latter instance we provide highly trained and experienced prosecutors to assist in resource-demanding trials and prosecutions, policy development advice and litigation support for those cases that do not justify direct Section involvement.

The Environmental Defense Section defends rule-making, regulatory and permit actions, and decisions by federal departments and agencies, notably the Environmental Protection Agency, the Department of the Interior, the Army Corps of Engineers, and the Coast Guard. It also represents federal agencies sued for violations of environmental law and has responsibility for affirmative litigation to enforce the wetlands laws. The majority of EDS's litigation docket (approximately 70%) is in defense of client agency actions.

The Environmental Enforcement Section conducts affirmative civil litigation to control and abate pollution. This Section is responsible for judicial enforcement of most of the Environmental Protection Agency statutes and rules which regulate discharges into the Nation's air and water and which govern pesticide operations, solid waste storage, and nuclear waste. Finally, the Section brings natural resource damage actions on behalf of the federal trustees (Departments of Commerce, the Interior and Agriculture), claims for

contribution against private parties for contamination of public lands and the recoupment of money spent to clean up certain oil spills on behalf of the Coast Guard.

PROGRAM CHANGES.

	Perm. ECS	FTE	Amount
Environmental Crimes	6	3	\$889
Environmental Defense
Environmental Enforcement
Environmental Protection	6	3	889

This increase seeks to address the following objectives:

1. Protect the natural environment and our citizens.
2. Enforce the law fairly and effectively to assure a clean environment.

A program increase of 6 positions (3 attorneys) and \$889,000 (\$500,000) is sought to build upon two ECS initiatives in 1998:

The Environment and Natural Resources Division is requesting additional resources to build upon two nationwide environmental crime initiatives. Specifically, an increase of 6 positions, 3 workyears and \$889,000 (\$500,000 for ALS) is sought for the Environmental Crimes Section to address vessel pollution and CFC smuggling.

Vessel Pollution Initiative. This initiative is an outgrowth of the Section's successful investigation and prosecution of several Clean Water Act cases involving the intentional discharge of oil and other pollutants in U.S. V. Princess Cruise Lines, and U.S. V. M/G Transport Services, Inc. The Section's involvement in these earlier investigations, coupled with the sharing of intelligence from various agencies that section attorneys worked with, led to the realization that a widespread and heretofore largely unchecked problem of vessel pollution exists both in ocean and inland waterways. This in turn led to the formation of a separate unit within ECS to concentrate on the novel legal and investigative issues presented by this new category of environmental criminal prosecution.

As part of this initiative, attorneys from the section are training key personnel within the U.S. Coast Guard and other enforcement agencies in the vessel pollution statutes and basic criminal enforcement. They are

collecting and analyzing data for the purpose of targeting enforcement resources and are actively preparing and planning a number of enforcement operations, such as the December 1996 10-count indictment returned against one of the world's largest cruise lines (U.S. v. *Royal Caribbean Cruises, Ltd.*) charged with repeatedly fouling U.S. coastal waters by dumping bilge water containing oil and with falsifying records to cover it up.

CFC Smuggling. The Environmental Crimes Section is also spearheading a nationwide crackdown on the smuggling of ozone-destroying chlorofluorocarbons (CFCs) -- a problem of growing concern, ranking second only to narcotics as a source of black market profits. CFC smuggling has a ready market of approximately 80 million older American cars. Owners of these older vehicles must either have their cars retrofitted to use the coolants -- at a cost of \$50 to \$100 per car -- or purchase increasingly expensive CFCs from existing legal stockpiles. Estimates are that millions of pounds of CFCs have been smuggled into the country. CFCs contribute to the destruction of the Earth's ozone layer which protects the Earth's surface from harmful ultraviolet-B radiation. Increases in ultraviolet-B radiation lead to increases in skin cancer and cataracts and also inhibit plant and animal growth.

The Justice Department became aware that the black market for CFCs was developing following a series of cases in the Southern District of Florida. These cases, coupled with intelligence from various sources (including industry and the CIA) indicated that chemical manufacturing facilities in several countries, including Russia, China, India and Mexico, were producing CFCs that were ending up in a black market in the U.S. In response, ECS worked with U.S. Customs and EPA to determine which were the most likely ports of entry for these chemicals. AUSAs from the districts in those ports were then recruited to participate in a National Enforcement Initiative. ECS prepared and distributed a primer on CFC smuggling, including a 25-page memo detailing the relevant law. The initiative has developed into a workgroup of prosecutors and investigators, who have been meeting regularly to discuss strategies and case development. Both AUSAs and ECS attorneys have been developing prosecutions as a direct result of the initiative.

The success of the initiative was demonstrated recently (January 9, 1997), when Attorney General Reno, EPA Administrator Browner and U.S. Customs Commissioner Weise jointly announced the filing of charges against 15 people and three firms for conspiring to smuggle nearly 900 tons of CFCs into the U.S. Together the charges involve six separate operations in five states (Texas, Florida, Pennsylvania, California and Georgia). ECS has proved essential in the coordination of cases, and in providing skilled prosecutors to handle individual and interconnected cases in several districts. The role of ECS is expected to continue to grow as this important global initiative develops.

Finally, the ECS request for 1998 includes \$500,000 for ALS. Automated litigation support is critical to the effective conduct of the Section's litigation, providing a wide variety of technical services and systems. These include database design and creation, document management, creation of brief banks, digital imaging, and mapping capability. From 1995 to 1996, the Environment Division's automated litigation support funding was slashed from more than \$6 million to \$1 million so that the money could be used to cover the higher payroll and other uncontrollable cost increases. Although ENRD helped pioneer litigation support in the Department, we have seen our base funding for it erode precipitously and these severe cuts have limited our options for handling our most important litigation and, in turn, limited our ability to adequately enforce the pollution laws and maintain the deterrent effect of a strong visible enforcement program. Simply put, without additional base funding for litigation support, we cannot do our jobs and we cannot compete with the opposition.

A. Definitions of Terms or Explanations for Indicators:	
•	Conviction rate includes convictions obtained by plea agreement and trial.
•	Ratio of budget to penalties... includes both the appropriated and Superfund budgets as do the penalties, fines, et. al. recovered.
•	Ratio of EES budget... is an all-inclusive figure, i.e., it includes the value of SEPs and non-Superfund Injunctive Relief.
•	SDS Payout Percentages do not include cases with incomplete data.
•	N/A: Statistics for 1996 not yet available from EOUSA.
B. Factors Affecting FY 96 Program Performance.	
Government shutdowns and budget uncertainty	
C. Factors Affecting Selection of FY 97 and 98 Targets.	
These projections are based on current legislation; dollar amounts could be significantly affected if legislative changes are enacted (e.g., Superfund reauthorization).	
FURTHER NOTES: Our Sections are extremely reluctant to set monetary "targets" because, especially in the criminal prosecutions, investigations and prosecutions are primarily driven by the <u>Principles of Federal Prosecutions</u> -- not monetary concerns.	
• Case closings in 1995 and 1996 are disproportionately high because of a concerted effort to close our inactive case files.	
• Unusually high in 1996 due to \$75 million penalty in <u>U.S. v. Rivera (D.P.R.)</u>

1998 Estimate	154	161	19,072
Increase/Decrease

BASE PROGRAM DESCRIPTION: This program includes four sections: the General Litigation, Indian Resources, Land Acquisition and Wildlife and Marine Resources Sections.

The General Litigation Section is the largest of the four sections in this Decision Unit; its cases span over 70 statutory areas administered by several dozen client agencies. Traditional General Litigation cases involve inverse condemnation, in which Government actions are alleged to have taken private property; Indian claims for monetary relief from Government inaction or mismanagement; defense of federal programs challenged for faulty environmental impact analyses; and mineral leasing and mining cases on land and in the Outer Continental Shelf. The spectrum of program initiatives exposed to statutory and constitutional challenge is as broad as the federal portfolio on environmental and public land issues -- and growing. It includes such programs and projects as: biotechnology research, missile and submarine defense, highways, dams, nuclear waste transportation and treatment; challenges to agency actions under the National Environmental Policy Act; decisions regarding Indians and Indian tribes; agency action under the Alaska Native Claims Settlement Act; water rights litigation affecting federal interests including defense of the United States' interest in general stream adjudications; and the federal surface mining program. It also reaches to litigation affecting mineral resources and seeks to obtain federal royalties. Finally, it extends to include those interests related to adjacent seas and seabeds and the determination of the location of the coastline and other maritime boundaries of the United States.

The United States has established trust relationships with various Indians and Indian tribes through a myriad of treaties, statutes and Executive Orders. Under these authorities, the Government is obliged to perform a number of functions on behalf of these tribes, including litigation to defend their rights. The Indian

Resources Section handles these cases, including critical litigation involving water rights. Many Indian reservations lie in the arid portions of the country where competition for water is fierce, and tribal rights to water must be established before reservation lands can be developed. Over 50 million acres of reservation lands and the rights to major water systems in dry western states are at stake. Other cases in which the Government represents the interests of Indians involve the establishment and protection of hunting and fishing rights and suits to answer questions about tribal rights to self-determination.

The **Land Acquisition Section** is responsible for filing and prosecuting condemnation actions to acquire properties needed for Congressionally authorized purposes which acquiring agencies are unable to acquire by direct purchase. In these condemnation proceedings just compensation, the amount of which is usually a highly contested issue, is determined and paid to property owners. Acquisition by condemnation is a means of last resort; agencies are required by law, to the greatest extent practicable, to make every reasonable effort to acquire property by negotiation and direct purchase before requesting condemnation. A top priority is to move these high-exposure cases expeditiously.

The **Wildlife and Marine Resources Section** has responsibility for both civil and criminal cases arising under the Federal fish and wildlife conservation statutes. Litigation under these statutes can play out in any of three different contexts: civil defensive litigation, in which the Section defends federal agencies whose programs are challenged as inconsistent with the requirements of federal conservation statutes; civil enforcement actions, principally in which we seek to enjoin persons (which can include private, state, or local entities) from violating federal conservation statutes (these typically are to stop a developer from destroying habitat that is essential to the conservation of protected wildlife); and criminal prosecutions. The principal client agencies of the Wildlife Section are the Interior Department's Fish and Wildlife Service (FWS) and the Commerce Department's National Marine Fisheries Service (NMFS), a branch of the National Oceanic and Atmospheric Administration (NOAA).

PROGRAM CHANGES: None.

BASE PROGRAM DESCRIPTION: The Management and Administration decision unit includes the Office of the Assistant Attorney General and the Executive Office for Administration. Thus, this program provides overall direction and management to the Environment and Natural Resources Division, and supervises and administers operations necessary to support the Division's litigation mission. Responsibilities of the latter unit include: budget preparation and execution; financial management; development, operation and maintenance of management and automated support systems; workload and resource requirements analyses; recruitment; processing of personnel actions; management of space and facilities; provision of office equipment and supplies; processing mail; and the provision of messenger, copying and printing services.

In addition to overseeing the renewal of the Environmental Crimes Section, and testifying before Congress on a wide variety of matters, the Office of the Assistant Attorney General has moved aggressively this past year on a number of fronts: working with the Associate Attorney General to spearhead a Department response to the County Supremacy movement; improving Superfund enforcement by encouraging administrative settlements; prospective purchaser agreements and expanded use of Alternative Dispute Resolution (ADR); and integrating the work of the various sections into a coordinated effort. The Executive Office has also been busy: they implemented a new attorney timekeeping system; oversaw the collection of nearly \$270 million in debts owed the Government; provided modern telecommunication services to two field offices; completed a study and training in the use of VISA Cards as an alternative procurement method; provided litigation support to approximately 190

¹ The Government VISA card allows the division to delegate procurement authority directly to 200 litigators. Before VISA, only six administrative staff were authorized to purchase goods or services for (continued...)

cases and projects, including trial support which was instrumental in the highly successful outcome of the Marine Shale trial; and served as the primary participant in the Department-wide Justice Consolidated Office Network (JCON), the next generation office automation system now being implemented.

Program Performance Information

MISSION:

To assist the Attorney General in her role as legal adviser to the Executive Branch, and to provide timely, thorough and reliable legal advice in response to requests from the President, the White House staff through the Counsel to the President, the Attorney General, Justice Department components and Executive Branch agencies.

ORGANIZATIONAL GOALS:

To provide general legal advice to the President and Executive Branch agencies.

To resolve Intra-Executive Branch disputes over legal questions.

To advise other components of the Department of Justice where litigation or proposed legislation raises constitutional issues or other issues of general concern to the Executive Branch.

To testify and prepare testimony in connection with pending legislation of interest to the Department and the Administration, and to assist in the drafting of legislation.

To approve the form and legality of Executive Orders and Orders of the Attorney General.

BASE PROGRAM DESCRIPTION:

The authority for the Office of Legal Counsel' (OLC) is provided in 28 C.F.R. 0.25. The principal duty of OLC is to assist the Attorney General in the role as legal adviser to the President and Executive Branch agencies and as arbiter of legal disputes within the Executive Branch. OLC also provides general legal assistance to other components of the Department, especially where litigation or proposed legislation raises constitutional issues or general issues of executive authority. It reviews for form and legality all Executive Orders and Proclamations proposed by the President, as well as all proposed Orders of the Attorney General and all regulations requiring Attorney General approval. In addition, OLC is also involved in coordinating the work of the Department regarding treaties, executive agreements and international organizations, and performs a variety of special assignments referred to the Office by the Attorney General, the Deputy Attorney General or the Associate Attorney General. The Office also has responsibility for advising the Office of Government Ethics on matters of law in the area of conflict of interest.

At the direction of the Attorney General and the Deputy Attorney General, OLC has convened meetings of General Counsels' consisting of the general counsels of the principal Executive Branch components and chaired by OLC. This group has been and will be utilized to improve coordination and consistency in handling important legal issues of concern through the Executive Branch, particularly legal matters bearing upon the President's constitutional responsibilities and authority.

Currently, it is a rare occasion that requests are considered appropriate for formal Attorney General opinions, which are drafted in OLC and reviewed, revised and approved by

the Attorney General. Instead, requests result in the preparation of legal opinions signed by the Assistant Attorney General or one of the Deputies based upon the research of one or more of the Office's staff attorneys. Other requests result in the provision of oral advice to the client agency. Since 1977, at the direction of the Attorney General, this Office has published selected formal opinions. Volumes covering the years 1977 through 1987 have been issued. Softbound volumes covering the years 1988 through 1992 have been issued as preliminary prints. Production of hardbound editions for these years is pending. OLC has released in looseleaf form the opinions of the Office from 1993 through April 1995 as an interim measure preliminary to publication in hard-bound volumes.

OLC's role in the Department's legislative program has increased dramatically in recent years, and includes drafting legislative opinions, testimony, and preparation of Presidential signing statements. OLC has taken a major role in either testifying or preparing testimony in connection with pending legislation of interest to the Department and the Administration, and has assisted in the drafting of legislation.

In addition, because of its expertise in certain areas, OLC has assumed an on-going advisory role to other Department components, including to the Solicitor General and the litigating divisions on issues relating to separation of powers, executive privilege, national security matters, federalism, and immigration matters.

OLC generally does not initiate any programs nor does it have control over the volume of its work. The work results from requests for opinions and legal advice from the President, the White House staff through the Counsel to the President, the Attorney General, members of the Cabinet and heads of Executive Branch agencies and other Department of Justice officials.

ACCOMPLISHMENTS AND WORKLOAD:

Items	1995	1996	Estimates	
			1997	1998
Executive Orders and Proclamations	96	98	112	115
Opinions	1,239	1,248	1,258	1,268
Intradepartmental Opinions	2,737	2,970	2,980	2,990
Special Assignments	2,325	2,320	2,325	2,330

EXPLANATION:

The "Opinions" category is an estimate of advice given to the White House, OMB and other Executive Departments and agencies. It includes both written and oral advice as well as responses to requests for information.

The "Intradepartmental Opinions" category is an estimate of informal advice, formal opinions, and bill comments given to the Office of the Attorney General as well as other Departmental Units.

The "Executive Orders, Proclamations" category includes Orders reviewed by OLC for formal and legality, often on an expedited basis.

The "Special Assignment" category is an estimate of a number of different matters which consist of administrative matters, including responses to oral requests for information and referral, and citizen inquiries as well as review of Freedom of Information Act and Privacy Act requests.

Mission: To vindicate the constitutional and Federal rights of persons who have been subjected to discrimination on the basis of race, color, gender, disability, religion, familial status, and national origin and, in so doing, to deter others from engaging in discrimination.

General Goals:

1. To significantly reduce police and other official criminal misconduct and to eliminate or substantially reduce violent activity by private citizens (including organized hate groups) against others because of their race, religion, national origin, or gender.
2. To prevent and eliminate systemic barriers to the full participation in the electoral process.
3. To eliminate discrimination in employment, housing opportunities and credit transactions, and educational opportunities.
4. To protect the constitutional and statutory rights of institutionalized persons.
5. To ensure that public services, programs and activities do not discriminate on the basis of disability and to ensure that public accommodations are available to persons with disability.
5. To eliminate immigration-related unfair employment practices.

BASE PROGRAM DESCRIPTION: This program has primary responsibility for handling the Division's work before the U.S. Supreme Court and the courts of appeals, for giving legal advice to federal agencies and other organizations within the Department and the Division, and for resolving appeals of decisions rendered by the Division's Office of Redress Administration. Most of our work consists of preparing briefs and presenting oral arguments in the courts of appeals and preparing briefs for filing in the Supreme Court in civil rights cases in which the United States participates as a party or as amicus curiae. These tasks require a thorough and independent examination of the entire record and the relevant legal authorities in each case.

The Appellate Section's caseload and productivity has been increasing steadily over the past few years. In fiscal year 1995, we produced 112 briefs and other papers of substance for filing in the courts of appeals and the Supreme Court; a significant increase over 83 such filings in fiscal year 1994, 78 in fiscal year 1993, and 66 in fiscal year 1992. In fiscal year 1996, we filed 124 briefs and other substantive papers involving civil rights matters in the courts of appeals and the Supreme Court -- more than in any year in the last 10 years. In addition, Civil Rights Division attorneys participated in 29 oral arguments before the courts of appeals.

This increased workload at the appellate level results from increased litigation in the Division's trial sections, as well as at the Department of Housing and Urban Development (HUD). The Fair Housing Amendments Act of 1989 vastly increased the Department's litigation authority and, for the first time, authorized HUD to litigate fair housing cases before administrative law judges. This section handles the appeals from district court decisions resulting from the Division's litigation, and petitions for review and enforcement of HUD administrative decisions before the Fifth Circuit. In addition, the Division has been successful in securing access to clinic entrances Act, the National Voter Registration Act, and the Americans with Disabilities Act has also increased our responsibilities. In addition, litigation and appellate activity has increased as a result of Supreme Court decisions in the voting area. We expect all of these trends to continue in fiscal years 1997 and 1998.

Of 46 decisions on the merits this fiscal year, we have won full or partial victories in 31 (67%). Some of our more significant victories include:

United States v. Commonwealth of Virginia (VII). The Supreme Court held that the Commonwealth of Virginia's exclusion of women from the Virginia Military Institute violated the Equal Protection

Clause, and that the remedy of providing women a separate program at Mary Baldwin College did not cure the violation.

O'Connor v. Consolidated Coin Caterers. The Supreme Court held that a plaintiff may make out a prima facie case of age discrimination by showing that the replacement worker was substantially younger than the plaintiff, proof that plaintiff was replaced by someone outside the protected class is not required.

United States v. Soderma and United States v. Wilson. The Seventh Circuit upheld the constitutionality of the Freedom of Access to Clinic Entrances Act.

Markin v. State of Michigan. The Sixth Circuit held that Michigan's zoning law prohibiting the location of a licensed group home for persons with handicaps within 1,500 feet of another such home and requiring the notification of communities of the proposed licensing of the group home violates the Fair Housing Act.

United States v. Cannon and United States v. Dunnaway & Van Cleave. The Eighth Circuit affirmed the sentences and conviction of a group of Skinheads who attacked an African American man who was sitting in a public park.

BASE PROGRAM DESCRIPTION: This Section is responsible for the investigation and prosecution of violations of federal criminal civil rights statutes which were designed to protect personal liberties, including:

Two statutes, passed during Reconstruction and amended in 1983, that prohibit persons from acting under color of law, or in conspiracy with others, to interfere with an individual's federally protected rights;

Criminal provisions of the Civil Rights Act of 1968, which prohibit using force or threats of force to injure or intimidate any person involved in the exercise of certain federal rights and activities;

A law which proscribes interference with persons in the exercise of their religious beliefs and the destruction of religious property. On July 3, 1996, the President signed a bill passing the Church Arson Prevention Act of 1996, which amended 18 U.S.C. §247 to strengthen the criminal law against church burning and desecration. The bill lessened the interstate commerce requirement, added a racial motive element, and eliminated a \$10,000 damage requirement.

Criminal provisions of the Freedom of Access to Clinic Entrances Act ("FACE"), which prohibit conduct intended to injure, intimidate or interfere with persons seeking to obtain or to provide reproductive health services; and,

Other statutes that prohibit the holding of individuals in peonage or involuntary servitude.

Since June of 1996, at the direction of the President and the Attorney General, efforts have been directed to establish the National Church Arson Task Force (NCATF) to address the recent rash of fires across the nation, at many predominately black churches, as well as coordinating the investigation and prosecution of arsonists, dissemination of information to the public and developing initiatives to help mitigate losses, heal communities and strengthen prevention efforts. Thus far, approximately 328 incidents of fire at houses of worship occurring since January of 1995 have been reported to the Task Force. Almost half of the 328 fires have been at African-American churches; of the fires at African-American churches, approximately 80 percent have been in the South. Since 1995, arrests, both local and federal, of 443 suspects have been made in connection with the church fires. Of these, 100 have been charged with violating federal civil rights, two former Ku Klux Klan members were charged and ultimately pled guilty to violating federal civil rights, two conspirators in arson statutes in connection with the June 21, 1995, arson of the Macedonia Baptist Church in Bloomville, South Carolina. These charges followed guilty pleas from two other former Klan members to burning the Macedonia Baptist Church as well as the Mt. Zion AME Church in Greeleyville, South Carolina. Additionally, the first case charging 18 U.S.C. § 247 under the amended statute was filed during 1996 in connection with the burning of the Church of God of Prophecy in Dyersburg, Tennessee. Recently, the defendant in that case pled guilty to the 1996 Church Arson Protection Act for this church fire. In another case in Las Vegas, Nevada, one defendant recently pled guilty to violating the Church Arson Protection Act in connection with an arson at the Church of Christ Church in Henderson, Nevada.

During fiscal year 1996, the Section received over 10,000 complaints alleging criminal interference with civil rights, approximately 2,600 requiring investigation by the Federal Bureau of Investigation. A substantial majority of the complaints involved allegations of official misconduct, especially allegations of physical abuse by law enforcement officers. This year, 6 new investigations were presented to the grand jury and resulted in 12 indictments. In 1995, 128 indictments were returned against 22 defendants. The conviction of 22 defendants and the acquittal of 14. In addition, guilty pleas from 85 defendants, in conjunction with trial convictions, resulted in a success rate of 83%.

Police and other official misconduct, which constitutes the majority of the complaints reviewed by the Section, continued to receive our attention in 1996. These officials, including police officers, deputy sheriffs, state and federal prison correctional officers, an INS detention enforcement officer, and a state magistrate, were charged with having used their positions to deprive individuals of constitutional rights, such as the right to be free from unwarranted assaults, illegal arrests and searches. For example, the former Warden of the Pearl River County Jail in Mississippi has been charged with raping and/or sexually abusing women prisoners who were in his custody and the Florence, Alabama, Chief of Police pled guilty to assaulting two burglary suspects by pointing a revolver at each of them during questioning and pulling the trigger at least twice knowing the gun was loaded with only blanks. In California, an inspector with the Immigration and Naturalization Service at San Isidro was recently sentenced to 9 years in prison for his guilty plea to charges relating to the sexual assault of a foreign national who was appealing the confiscation of her border crossing card. After the assault, the defendant returned the victim's border crossing card to her and offered to obtain border crossing cards for her children if she agreed to see him

again. In several other cases, an INS Detention Enforcement officer was convicted and subsequently sentenced to 21 months in prison for using excessive force against an unconscious and handcuffed detainee by striking him in the face and repeatedly throwing him against the wall inside a cell at Terminal Island Detention Center in San Pedro, California; a former deputy sheriff with the Douglas County Sheriff's Department in Georgia, was sentenced to 37 months in prison after pleading guilty to kicking a handcuffed arrestee while in the garage area of the local jail; and a correctional officer at the Federal Medical Center in Lexington, Kentucky, was sentenced to 21 years in prison after being convicted on charges of sexually assaulting five female inmates. Additionally, three death penalty cases were tried by the Second Circuit as part of the INS Detention Enforcement officer's beating of a young man. The day after she reported the beating incident to the police department's internal affairs division, the woman was shot to death while standing on a street corner.

Incidents of racial/religious violence (also known as hate crimes), the reporting of which has increased substantially in the past several years, remains another priority area for prosecution, especially when hate groups are involved. During fiscal year 1996, 18 racial violence cases have been filed charging 65 defendants in connection with crimes such as cross-burnings, arson, vandalism, shootings and assault. In addition, a 100% success rate has been achieved in this area. Fifty-four defendants, including some defendants charged last fiscal year, have been victoriously prosecuted either by conviction or guilty plea. Recently, three defendants, one of whom is a racist skinhead and a member of the white supremacist group, South Bay Nazi Youth, were sentenced to life plus 50 years in prison for their conviction of a civil rights conspiracy after they drove through the streets of Lubbock, Texas, hunting African-American men, luring them to the conspirators' car and shooting the men to death. The defendant who was the driver of the car, a result of the shooting, was sentenced to life plus 50 years in prison. The defendant who was the passenger, a result of the shooting, was sentenced to life plus 50 years in prison. The defendant who was the driver of the car, a result of the shooting, was sentenced to life plus 50 years in prison. The defendant who was the passenger, a result of the shooting, was sentenced to life plus 50 years in prison. Additionally, in Kentucky, four defendants were sentenced to terms of imprisonment ranging from 28 to 110 months for their guilty pleas to charges in connection with the arson of a home owned by a white couple who had rented a room to an African-American man. Several days before the arson, one of the defendants allegedly threw bottles and shouted racial slurs at the African-American victim; four defendants, members of a neo-Nazi skinhead organization, were sentenced to terms of imprisonment ranging from 12 to 78 months after pleading guilty to conspiracy and interfering with the housing rights of an interracial couple in Richland, Mississippi, by throwing a molotov cocktail at their trailer home; and, eleven defendants were sentenced to terms of imprisonment ranging from 8 to 18 months following their guilty pleas to conspiring to interfere with housing rights in connection with two cross burnings in front of homes in which African-Americans lived in Junction City, Louisiana. Additionally, two defendants were convicted while one other defendant pled guilty to charges relating to a racially motivated shooting of three African-American men, seriously injuring one of the victims. As the victims left a bar in Fort Towson, Oklahoma, the defendant, who had earlier taunted the victims with racial epithets, followed the victims when they left the bar and shot the area by car, the defendant pled guilty to the shooting. The defendant was sentenced to life plus 50 years in prison. Additionally, in Kentucky, the victim's automobile ultimately forcing it off of the road and, four affiliates of a skinhead organization pled guilty to burning a large wooden cross in the front yard of the home of an African-American man living in a predominantly white neighborhood in Gresham, Oregon. Charges were recently filed against three skinhead members of the Nazi Low Riders, who assaulted an 18 year-old African-American man as he was getting into his car in the parking lot of a Blockbuster video rental store as well as the attack of a 16 year-old African-American male as he was walking along a street in Lancaster, California.

The Section is also tasked with enforcing the criminal provisions of the Freedom of Access to Clinic Entrances Act (FACE), whereas the Special Litigation Section within the Division enforces the civil provisions. Since the enactment of the FACE statute in May 1994, the Section has received numerous complaints of possible violations of the Act, all of which have required investigation, review and response. To date, the Section has opened 217 reproductive health care violence and obstruction investigations, 19 of which have become prosecutions. Since the charging of the first criminal FACE case in August 1994, the conviction rate has been 100%. During fiscal year 1996, two of the Section's trial attorneys devoted substantial time to various matters involving the new statute and to a Task Force staffed by attorneys from both the Criminal and Civil Rights Divisions created by the Attorney General to investigate abortion-related violence. The Task Force is working with the Michigan Attorney General's Bureau on Alcohol, Tobacco and Firearms, FBI, local law enforcement and United States Attorneys' Offices. Investigative efforts in this area are being transferred solely to the Section.

Although involuntary servitude and slavery complaints received by the Section have continued to decrease in recent years, two such cases were filed during FY 1996. In Los Angeles, California, five defendants were charged with forcibly bringing a 22 year-old Chinese national to the United States from China and subsequently forcing her to labor as a sex slave; and in Miami, Florida, an Indian husband and wife were charged and subsequently pled guilty to holding an Indian woman, who came to the United States from Bombay, India, to work as a housekeeper, in involuntary servitude. Also during FY 1996, eight Thai nationals were sentenced to terms of imprisonment ranging from two to seven years for their guilty pleas to conspiracy, involuntary servitude and harboring illegal aliens. The defendants enticed citizens from Thailand to travel to the United States by promising the victims high wages, good hours and freedom. Upon arrival in the United States, the Thai laborers were transported to a work compound where they were confined and forced to work up to 20 hours a time. The victims were housed in an apartment complex in El Monte, California, encased by razor wire and guarded by military police. The defendants used threats against the victims and threatened families to force them to continue to work in the El Monte compound. In addition, an extensive grand jury investigation was completed recently resulting in federal charges against a farm labor contractor, and three of his employees for violating civil rights, labor and immigration laws, including conspiracy, subjecting persons to involuntary servitude, extortion, and smuggling and harboring aliens.

PROGRAM CHANGES:

	<u>Pos.</u>	<u>FTE</u>	<u>Amount</u>
Civil Rights Prosecution			
Police Misconduct and			
Hate Crimes	3	2	\$263

An increase of three attorneys is crucial to continue to maintain prosecutive efforts relating to arson directed at houses of worship and violence against abortion clinics as well as to address the continued increase of police misconduct and violence against women and children. The effect of the continued increase of police misconduct and violence against women and children is to increase the burden on the Section's limited resources. The effect of the expansion of the Civil Rights Division's hate crime responsibilities relating to church arson with the enactment of the Church Arson Protection Act (which eased the severe evidentiary burdens of the statute to combat damage to religious property) as well as the transfer of the Abortion Clinic Task Force prosecutive responsibilities to the Section, will increase the number of the Section's investigations and prosecutions brought under those statutes. Additionally, the effect of the

increased public awareness nationwide of federal jurisdiction to prosecute incidents of police brutality as a result of several highly publicized incidents as well as the concomitant attention devoted to the incidence of hate crimes under reporting provisions of the Hate Crimes Statistics Act, has resulted in a continued increase in complaints received by the program.

Whether a complaint initially comes to the attention of the Section or to the FBI, all matters are reviewed by the Criminal Section. Attorneys are required to review all FBI investigations and recommend which should proceed to grand jury and potentially trial. They are responsible for directing the investigations conducted by the FBI and for reviewing the results for prosecutive merit and ultimately taking them to trial.

The simultaneous demands of presenting new matters to grand juries for indictment and of conducting those prosecutions once indictments are returned reduces the time available to review and to develop other incoming incidents that warrant prosecution. To be successfully prosecuted, complex and thorough grand jury investigations must be conducted. The victims of most official misconduct cases tend to be unsympathetic while the defendants are often well respected members of the community. As a result, virtually all of these cases require extensive and time consuming investigative efforts on the part of both lawyers and investigators. The number of grand jury investigations initiated last year was the second highest number of grand jury investigations ever initiated in one year and half of these investigations related to incidents involving official misconduct. Additionally, our attorney resources have undergone more strain in our effort to comply with Division priorities requiring greater Criminal Section attention to the more serious and complex police misconduct and hate crimes which result in serious bodily injury and death. Further, the even prosecutors currently dealing with these matters have been reduced in number. Finally, the Criminal Section and the United States Attorneys' Offices that are anticipated that during FY 1998, the responsibilities of the NCATF will be transferred solely to the Criminal Section.

The Section also has a unique function in providing a nationwide perspective in both the areas of hate crimes and official misconduct. The program has developed an expertise in the area of federal criminal civil rights laws that serves as an integral resource to U.S. Attorneys' offices which are expanding their participation in all types of criminal civil rights prosecutions. The demands upon the program responsibilities -- to provide a national perspective and uniform standards for enforcement on difficult constitutional issues and cases with a high level of community interest -- are growing and mandatory.

The Section's ability to investigate and prosecute church arson cases in compliance with the newly enacted statute in addition to investigating and prosecuting police brutality, abortion clinic violence, and violent and intimidating acts of racial hatred in a timely and effective manner will be seriously impeded without the additional requested resources. The additional resources will enhance the ability of the program to bring prosecutions against the individuals and organizations which are responsible for the violence directed against the Nation's concerns in matters that receive national attention and which are fraught with strong conflicting emotions. The program's ability to respond as quickly as possible in initiating and carrying through these prosecutions is essential in reassuring communities that the use of excessive force by law enforcement officials and racial violence are not tolerated under federal laws.

Increase/Decrease

BASE PROGRAM DESCRIPTION: The Special Litigation Section enforces a variety of federal statutes to secure and protect significant constitutional and statutory rights of the nation's citizens. Section staff protect the health and safety of tens of thousands of individuals confined in state and local institutions across the nation; ensure unimpeded access to reproductive health facilities and places of religious worship; protect citizens against a pattern or practice of police misconduct; and, prohibit discrimination in public facilities on the basis of race, religion, national origin, and disability.

The Attorney General has identified three areas of the Section's responsibilities as high priorities for the Department. She is personally involved in the Section's activities to safeguard the rights of speeches institutionalized persons and has met with the Section on multiple occasions and made a number of speeches to national audiences. The Section's institutional reform work has also remained high and the General Accounting Office has prepared a report on the Section's protection of the rights of people in mental retardation facilities. The Attorney General has also identified the Section's activities in securing access to reproductive health facilities and remedying patterns of police misconduct as critical Department activities. Section staff serve on the Attorney General's Task Force on the violence against reproductive health providers and have contributed to the Department's concerted effort to end police brutality and other police misconduct.

The specific statutes the Section enforces include:

Civil Rights of Institutionalized Persons Act (CRIPA): This Act authorizes the Attorney General to investigate conditions of confinement at certain state and local residential institutions (jails, prisons, juvenile facilities, and facilities for the mentally ill, developmentally disabled, and chronically ill) and to initiate civil suits to ensure the protection and full enjoyment of constitutional and federal statutory rights where reasonable cause exists to believe there is a pattern or practice of denying persons confined to such facilities of their rights;

Freedom of Access to Clinic Entrances Act of 1994 (FACCE): This Act authorizes the Attorney General to investigate and, where necessary, to initiate civil litigation to obtain temporary, preliminary, and permanent injunctive relief, civil penalties, and damages in cases where force or threats of force, physical obstruction, or property damage interfere with persons seeking or providing reproductive health services or where such activities interfere with the exercise of religion at places of worship;

Section 210401 of the Violent Crime Control and Law Enforcement Act of 1994: This Act authorizes the Attorney General to initiate civil litigation for patterns or practices of violations of constitutional and statutory rights by law enforcement officials;

Omnibus Crime Control and Safe Streets Act of 1968, as amended: Authorizes the Attorney General to initiate civil litigation to remedy a pattern and practice of discrimination based on race, color, national origin, gender or religion involving services by law enforcement agencies receiving federal financial assistance;

Americans With Disabilities Act of 1990 (ADA): This Act authorizes the Department to evaluate, pursuant to Title II, complaints of discrimination on the basis of disability in publicly operated residential, institutions and, where necessary, to initiate suits to ensure the protection and full enjoyment of federal statutory rights; further, the Section has asserted the Department's position that community placement is required in cases where persons have been determined that a more integrated setting is appropriate to meet the needs of institutionalized persons;

Religious Freedom Restoration Act: This Act forbids governments from "substantially burdening" religious exercise without "compelling justification." The Section enforces this Act in its CRIPA institution cases.

Title III of the Civil Rights Act of 1964: This Act prohibits discrimination in public facilities on the basis of race, religion, or national origin.

Civil Rights of Institutionalized Persons Act

Under CRIPA, the Section protects the civil rights of persons institutionalized in state or local psychiatric hospitals, nursing homes, mental retardation facilities, prisons, jails, and juvenile detention facilities. As required by CRIPA, the Section's focus is on widespread "egregious and flagrant" conditions that pose life-threatening risks to the residents of these facilities. Recent media exposure has examined the Section's work in a variety of institutional settings, including CRIPA investigations and case management. The Section's personnel conduct all investigations, site visits, statutory required pre-filing negotiations, as well as all law enforcement activities including post-judgment monitoring, compliance reviews and compliance actions. Requests to initiate new CRIPA investigations far outweigh current staff resources. In order to maximize its efforts, the Section has recently focused on securing statewide relief. For example, the Section conducted investigations of 18 jails in Mississippi, 11 jails in Georgia, all four of the state-operated mental retardation facilities in Tennessee, all 13 juvenile treatment centers in Kentucky, and 8 juvenile detention centers in Puerto Rico. These investigations alone have resulted in safe and humane conditions for thousands of institutionalized people. The Section's activities pursuant to CRIPA will be maintained to the maximum feasible extent as resources are shifted to maintain current PACS enforcement activities and further efforts are made to enforce the Police Misconduct statute.

The Section maintained a fairly constant workload over the 1984-1994 period, conducting an average of 16 institutional investigations and 35 cases per year. The Section opened 22 new CRIPA investigations of 17 facilities in FY 1995. Although the Section has not opened any new investigations since FY 1995, the investigations well exceeded the number of active investigations in prior years. Similarly, the number of facilities involved in CRIPA cases rose to 68 in FY 1996. These increases are the result of ongoing consent decrees where the jurisdiction has failed to achieve compliance, and increased unwillingness by states to correct deficiencies voluntarily, necessitating litigation. In 1995 and 1996, management initiatives to reduce supervisory review layers, reduce the burden of proof needed to initiate new investigations, and streamline investigation technique by concentrating on geographic areas where similar problems exist have

permitted the Section to expand the number of investigations. Use of preliminary injunctions early in cases has helped to avoid protracted litigation. The Section has also developed and utilized a variety of enforcement devices to expand the effectiveness of its monitoring activities and facilitate compliance with outstanding decrees. In particular, the Section has utilized advisory panels, expert advisors, monitors, and special masters to assist with monitoring, provide technical assistance, and resolve disputes between the parties.

The Section achieved significant accomplishments during FY 1986. Major enforcement actions, including new cases, have been filed pursuant to CRIPA. The Section filed new CRIPA actions to protect the rights of the mentally retarded residents at Northern Virginia Training Center, Fairfax, Virginia and to protect the rights of the mentally ill and geriatric patients at Eastern State Hospital, Williamsburg, Virginia. A consent decree was filed regarding the Memphis Mental Health Institute, Memphis, Tennessee. The Section has filed and won multiple contempt motions in *United States v. Tennessee* (N.D. Tenn.) regarding Arlington State Hospital. In *United States v. Kentucky* (S.D. Ky.), the Section has filed and won multiple contempt motions. In both cases, the Section has filed additional motions to compel compliance with the consent decrees. In addition, creative enforcement devices have been employed to facilitate compliance with outstanding decrees in a number of other states. Special monitors or special masters have been appointed pursuant to our requests.

In keeping with the Attorney General's initiatives and CRIPA's emphasis on alternative dispute resolution, the Section has utilized a variety of methods in FY 1986 to resolve CRIPA matters, including mediation. Through the use of such mediation, the parties in *United States v. Michigan* (W.D. Mi.), the Section's longest standing CRIPA consent decree, have agreed to dismiss portions of the suit dealing with sanitation, fire safety, protection from harm and access to law libraries for two of the three facilities under suit. Mediation continues in *United States v. Tennessee* (Arlington) to address persistent problems in that case. We engaged in active mediations with a magistrate in Tennessee in an attempt to avoid litigation involving three additional mental retardation facilities. Moreover, a federal district court judge offered to serve as mediator in the two recent Virginia cases which produced an agreement between the litigants.

The Section has implemented aggressively the Division's priorities and policies recognizing the rights of people with mental disabilities to grow, develop, and exercise independence and to be served in the most integrated setting appropriate to their needs under the ADA and the Constitution. These new initiatives are reflected in CRIPA findings letters, complaints, and enforcement actions. The Section also recently filed an amicus brief in *Williams v. Massachusetts* (D. Md.), setting forth the Department's position that the ADA and 14th Amendment require community placement where state professionals have determined that a more integrated setting is appropriate to meet the needs of institutionalized persons.

The Prison Litigation Reform Act (PLRA), enacted into law on April 26, 1996, significantly increased the Section's workload under CRIPA. The Act changes the standards for entering prospective relief in cases involving conditions in correctional facilities. The Section is currently investigating, litigating, or enforcing consent decrees in nearly 130 prisons, jails, and juvenile correction facilities affected by the Act. Defendants have filed PLRA motions in cases affecting a large number of these facilities and we expect many additional motions to follow. These motions have dramatically increased the Section's workload. They raise issues about the constitutionality of the Act as well as substantive aspects of consent decrees and court orders. Attorneys and paralegals often must tour the affected facilities to gather current and accurate information. Due to limited resources, other CRIPA matters have been put on hold to give priority to PLRA

cases. These CRIPA matters will have to be addressed during FY 1997. We anticipate that the DIPA will significantly increase the Section's work at least through FY 1998.

Freedom of Access to Clinic Entrances Act

In addition to its CRIPA enforcement responsibilities, Section staff handles the civil enforcement of FACE. As a result of this new authority, the Section has devoted substantial resources to the development and litigation of civil FACE cases throughout the country. Thus far, Section attorneys filed 12 FACE cases and evaluated approximately 150 complaints of threats and interferences with access to facilities offering reproductive health services. These civil FACE actions have produced a significant number of injunctions which prohibit further unlawful activity and protect patients, doctors, and staff. FACE enforcement has been a high priority within the Section.

The Section has been extremely successful in each of its civil cases, with the courts upholding FACE's constitutionality and finding that it has been challenged. The Section has secured preliminary and permanent injunctions that have brought a range of relief including buffer zones around reproductive health clinics that have been the targets of anti-abortion violence and other conduct violative of FACE.

The Section has obtained injunctions prohibiting defendants from blocking clinic driveways and entrances. Restrictions have been obtained on the use of bull horns. Injunctions order defendants to stay a certain distance from doctors, their spouses and children. In all, the Section has obtained five preliminary injunctions, six permanent injunctions, and one order of contempt. Two additional motions for contempt are pending.

In order to develop these cases, Section attorneys and paralegals have made numerous contacts with women's organizations across the country, engaged in very substantial telephone interviews of potentially aggrieved persons and worked closely with the FBI, Marshals Service and local law enforcement. If after the initial telephone interviews Section attorneys believe there is a potential FACE violation, they often supplement these interviews with on-site interviews. These on-site interviews are essential in the Section's efforts to develop cases with doctors, clinic directors, staff, patients, and law enforcement as well as assess the credibility of the witnesses and the strength of the case.

The Section remains firmly committed to investigating and prosecuting to the full extent of the law all acts of violence against those who provide and seek reproductive health services. In view of the sensitivity of this issue and the potential for violence which exists at certain clinics, this workload will continue to require immediate response by Section staff.

Pattern of Practice of Police Misconduct

The House Judiciary Committee Report¹ on the parent legislation to the Violent Crime Control and Law Enforcement Act of 1994 underscores the dramatic need for federal intervention in dealing with the issue of police misconduct. That report cites testimony from police chiefs of ten major American cities that "the

¹ Report of the House Judiciary Committee on H.R. 3171, Omnibus Crime Control Act of 1991, October 7, 1991, pp. 135-7.

problem of excessive force in American policing is real." Further testimony to that Committee underscored that "police use of excessive force is a significant problem in this country, particularly in our inner cities. Because the Department of Justice lacked pattern or practice authority to address such police misconduct, Congress granted the Department of Justice the authority to investigate and prosecute police officers for excessive force in 1994. Under that statute, the Department of Justice has been able to bring law enforcement officials and determine whether a pattern or practice of such activity exists. This statute covers a variety of concerns about police misconduct including excessive force, failure of departments to investigate officers and discipline misconduct, discriminatory harassment, stops, search, seizure and arrests, coercive sexual conduct and retaliation for the exercise of rights. The Section is also using this statute as an adjunct to its CRIPA cases in juvenile detention facilities where there is a pattern or practice of abuse by juvenile detention officers.

The Special Litigation Section has developed a plan for enforcement, specifying that it will investigate both large and small police departments based on a broad array of allegations of police misconduct. In 1996, the Section reviewed 50 complaints which culminated in four new official investigations. In view of national media attention to this problem through FY 1996 and FY 1997, an increased volume of complaints is expected through FY 1998.

Americans with Disabilities Act

In FY 1996, the Section enforced Title II of ADA involving individual complaints from jails and prisons. More than 200 complaints were evaluated in a screening process to determine whether each complaint met the requirements of the ADA statute. However, late in FY 1996, responsibility for this enforcement was reassigned to the Disability Rights Section. The Section continues to enforce ADA pattern or practice complaints regarding activities in publicly operated mental health, mental retardation, and juvenile facilities, nursing homes, and other residential institutions. The Section asserts these rights in conjunction with CRIPA cases and as AMICUS in other cases.

Increase/Decrease

BASE PROGRAM DESCRIPTION: Section staff enforce laws designed to safeguard the right to vote of racial and language minorities and members of other specially affected groups and designed to remove barriers to voter registration.

Enforcement responsibilities include:

"Voting Rights Act of 1965, which safeguards the right to vote of racial and language minorities and, in particular--

-Prohibits practices that have a discriminatory result,

*Requires federal preclearance of voting changes from specially covered jurisdictions to prevent discrimination;

*Requires the use of minority languages in the electoral process in certain areas;

*National Voter Registration Act (NVRA), which facilitates voter registration for federal elections by allowing voters to register by mail, when they obtain driver's licenses, or when they obtain services from various government agencies, and permits voter purges only under very controlled conditions;

*Uniformed and Overseas Citizens Absentee Voting Act, which provides a remedy for the late mailing of absentee ballots to members of the Armed Forces and to other citizens who are abroad.

The Section has continued its efforts to assure that minority voters have a fair opportunity to elect candidates of their choice and to defend from unfair attack redistricting plans that provide such an opportunity. Fifteen of the Section's eighteen new lawsuits in 1995 involved this issue, as did 14 of the 52 lawsuits brought in earlier years that the Section continues to litigate. In addition, more than 70% of the Section 5 objections during 1995 and 1996 have involved voting changes that adversely affected the opportunity of minority voters to elect candidates of their choice. Decisions of the Supreme Court in 1993 (*Shaw v. Reno*), in 1995 (*Johnson v. Miller*) and in June 1996 (*Shaw v. Hunt*, *Bush v. Vera*) concerning the proper consideration of race in the drawing of redistricting plans have left this area of the law unsettled, and difficult issues of policy and litigative strategy abound. Also, in Section 5 declaratory judgment actions involving the election of judges, the United States District Court for the District of Columbia disagreed with positions we advanced regarding the application of Section 5. These decisions have resulted in further litigation concerning the legal standards under the Voting Rights Act and the Constitution, and our continued active participation to assure that minority voting rights are not compromised is essential.

The need for us to participate in the redistricting cases inspired by *Shaw*, *Miller*, and *Vera* to safeguard the rights that have been won over the past 32 years and to help the courts resolve difficult issues of law and policy, limits the Section's ability to participate in other litigation. *Shaw*-type cases are complex and difficult, and large investments of staff resources are required even in those cases where we are able to avoid lengthy discovery and trials.

The Section is responsible for reviewing the thousands of voting changes submitted to the Attorney General under Section 5, for defending Section 5 litigation in court, and for bringing lawsuits to enjoin the enforcement of voting changes that have not received the required Section 5 preclearance. During 1995 and 1996, the Attorney General's objections blocked implementation of a wide variety of discriminatory changes, from annexations that dilute minority voting strength, to special elections with inadequate Spanish language procedures, to dual office holding prohibitions, to county and statewide redistricting plans, to discriminatory NVRA implementation procedures, to discriminatory redistricting guidelines. In addition to this workload, the *Shaw*, *Miller*, and *Vera* decisions have increased the difficulty of the legal and factual analysis of redistricting and related changes, and have led to an increase in requests for reconsideration of past objections, which are our most difficult analyses.

When the National Voter Registration Act (NVRA) went into effect on January 1, 1995, the Voting Section was prepared to assure nationwide compliance and filed lawsuits against California, Illinois, Pennsylvania, South Carolina, Michigan, Mississippi, and Virginia. In a stunning series of victories, the courts have

been unanimous in upholding the constitutionality of the VRA. We are building on these accomplishments to assure compliance with all facets of the new law, and issuance of VRA compliance and remedies will continue to engage the Section's litigation resources at least through 1998.

The Section continues to bring lawsuits against jurisdictions that violate the minority language provisions of the Voting Rights Act, which enable minority language voters to participate effectively in the electoral process by requiring jurisdictions to use Chinese, Navajo, Spanish and other languages. In January 1996, a federal district court remedied Alameda County, California's inadequate Chinese language election procedures by approving a consent decree, filed with our complaint in April 1995, that provides a Chinese language election information program for the county, and remedies the county's failure to employ persons who speak Chinese in the county clerk's office and as poll workers. These protections are similar to those the Section achieved for Chinese Americans in New York City through the application of Section 5 of the Act. Most recently, in May 1996, the San Juan County, New Mexico, county clerk signed a Letter of Agreement incorporating a minority language election information plan. The Agreement, which follows extensive investigations of the county's implementation of the Act's minority language requirements, provides a detailed thirteen-point plan to enable the county's Navajo residents to become full participants in the electoral process. The Agreement was mediated after consent decrees in lawsuits filed to enforce the Act's language provisions. The Section has also brought a lawsuit against the State of New Mexico, in addition to the consent decree, to monitor earlier consent decrees providing minority language election information programs to benefit Native American voters in counties in Arizona, New Mexico, and Utah, and to monitor the use of Spanish in specially covered jurisdictions through review of voting changes under Section 5.

During 1998 the Section will give priority to the following enforcement areas:

Defense of racially fair redistricting plans. Continue to defend from unjustified attack redistricting plans designed to provide minority voters fair opportunities to elect candidates of their choice and will endeavor to achieve racially fair results where courts find, following *Shaw v. Reno*, *Johnson v. Miller*, and *Rush v. Yaka*, that redistricting plans constitute unconstitutional racial gerrymanders. The Supreme Court's decisions have resulted in litigation in which we will be directly involved or in which the lower courts will need our guidance.

Enforcement of prohibition of Section 2 of the VRA against practices with a discriminatory result. Continue to uncover and remedy methods of election, anywhere in the nation that prevent blacks, Hispanics, and other minorities from having a fair opportunity to elect candidates of their choice. The Supreme Court's *Shaw*, *Miller*, and *Yaka* decisions make our efforts in this area more difficult but also more urgent.

Enforcement of Section 5 of the VRA. Continue to review thousands of voting changes submitted under Section 5 and object to those found to be discriminatory, to bring enforcement lawsuits against jurisdictions using voting practices or procedures to which Section 5 objections have been interposed or for which the jurisdictions have not sought needed Section 5 preclearance, and to defend Section 5 declaratory judgment actions. The difficulty and importance of this responsibility has been magnified by Supreme Court's *Shaw*, *Miller*, and *Yaka* decisions and the recent restrictive decisions of the D.C. court.

Enforcement of the minority language requirements of the VRA. Continue to investigate covered jurisdictions and bring lawsuits where necessary to assure that minority language United States citizens who rely on Spanish, Chinese and other Asian languages, and American Indian and Native Alaskan languages have

the same opportunity to participate in voting-related activities as English-speaking voters. The 1992 extension and expansion of the minority language requirements through the enactment of the Voting Rights Language Assistance Act of 1992 reflects a renewed congressional mandate in this area, which we will continue to fulfill.

Enforcement of the NVRA. The resolution of our initial NVRA litigation has made clear the authority of Congress to enact the NVRA, and the Section will continue to seek judicial relief against states that resist full compliance. The NVRA has been successful beyond the most optimistic predictions of its proponents in increasing the number of U.S. citizens registered to vote, and we must continue to be able to react quickly to violations. Because of the complexities of the NVRA and the legal issues that will arise with respect to the NVRA and its relationship to state law and the VRA, we expect to remain heavily involved in NVRA litigation through 1998 and beyond.

Prevention of vote fraud and voter intimidation and harassment. Through litigation and the use of federal observers the Section continues to seek to protect minority voters from fraud, intimidation, and harassment.

The Section's overall enforcement of the VRA in other areas will continue in 1998 as well. The Section, for example, will continue to:

- send federal observers to monitor elections where needed to protect minority voters;
- investigate allegations of election day discrimination and take remedial action where warranted; and
- file lawsuits under the Uniform and Overseas Citizens Absentee Voting Act to remedy the late mailing of ballots to overseas voters.

In short, the Voting Section has a crucial role in our society in assuring that the cornerstone of our democracy--the right to vote--is made available to all citizens, regardless of race, color, language, literacy, or other irrelevant factors; it must have the resources that will enable it to continue to carry out its responsibilities with vigor.

1998 Base	62	61	5,862
1998 Estimate	62	61	5,862
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Employment Litigation Section enforces against state and local government employers the provisions of:

Title VII of the Civil Rights Act of 1964, as amended by the Equal Employment Opportunity Act of 1972; the Pregnancy Discrimination Act of 1978; and, the Civil Rights Act of 1991; and, other federal laws, orders and regulations prohibiting employment practices that discriminate on grounds of race, sex, religion, and national origin.

The Section also represents other federal agencies which are sued in relation to their enforcement of federal affirmative action programs and equal employment opportunity laws and regulations.

In fiscal year 1996, the Section filed complaints in 11 cases, settled 12 new or pending cases, reached an out-of-court settlement without filing suit in one matter, and handled 21 newly filed defensive cases. Since the beginning of fiscal year 1997, the Section has filed complaints in four cases, settled four new or pending cases and handled two newly filed defensive cases. Of the new cases and the one other matter, 13 resulted from Equal Employment Opportunity Commission (EEOC) referrals and three were based on the Attorney General's self-starting pattern or practice authority.

The Section's pattern or practice litigation often results in systemic changes to defendants' employment practices and serves as a signal to other employers to review voluntarily their practices to determine compliance with Title VII. Importantly, this litigation provides substantial make-whole relief, in the form of back pay, jobs, pensions and seniority, to large numbers of victims of discrimination. Under this authority, the Section has challenged, for example:

- the residency requirements of 35 suburban communities that had the purpose or effect of excluding minorities who lived in nearby cities with large minority populations;
- the hiring and/or testing practices of state and local police and fire departments as being not job-related and consistent with business necessity and discriminatory against minorities and/or females;
- the hiring and assignment practices of state and county penal institutions that discriminate against female applicants for correction officer positions and female incumbent employees in assignment and promotion practices;
- the ineffective and inadequate handling of sexual and racial harassment complaints by state and local employers;

*gender segregation and discrimination in pay against women in non-traditional public service jobs; and,

*discrimination in pay and benefits against ethnic minorities.

Because pattern or practice cases frequently affect the rights of hundreds of victims, a great deal of attention is given to identifying and providing make-whole relief to victims of discrimination in proceedings commonly referred to as "Stage II". The Section frequently obtains jobs with retroactive seniority for victims of hiring and promotion discrimination. Consistent with this effort, during 1986 the Section devoted resources to distributing:

*\$7.125 million in back pay to an estimated 1,500 black and female victims in litigation that challenged State-administered selection procedures for municipal police officers and sheriff's officers and correction officers positions throughout New Jersey and gender-restrictive hiring practices in the state's corrections system;

*\$270,000 to approximately 40 female victims denied employment as police officers by the Palm Beach Gardens, Florida, Police Department;

*\$700,000 in back pay and pension relief to 247 blacks and females who were discriminated against by the City of Belleville, Illinois;

*\$450,000 in back pay and other relief to 139 black applicants who unlawfully had been denied employment as police officers and fire fighters by the City of Hialeah, Florida;

*\$2.2 million in back pay and other relief to 170 Filipino teachers who had been discriminated against by the Public School System of the Northern Mariana Islands on the basis of national origin in salaries, benefits and terms of conditions of employment;

*\$2 million in back pay and job relief to up to 350 female victims of discrimination by the Orleans County Sheriff's Department;

*in a contested Stage II proceeding, identifying victims of the City of Warren, Michigan's discriminatory residency and recruitment practices;

*\$1 million to a yet to be determined number of black and female victims of employment discrimination by the Louisiana State Police; and,

*\$1.74 million in back pay to a yet to be determined number of victims of racial and sexual harassment by the New Jersey Department of Corrections.

The Section also enforces Title VII by filing suits based upon individual charges of discrimination referred to the Department of Justice by the EEOC. Charges are filed with the EEOC by individuals who believe that they were unlawfully denied employment opportunities or otherwise discriminated against by a state or local government employer. If, after investigation, the EEOC determines that a charge has merit and efforts to obtain voluntary compliance are unsuccessful, the EEOC may refer it to this Department. The Department of

Justice then has authority to determine whether or not to initiate litigation. While small in scope when compared to pattern or practice suits, these are cases that might not be pursued without the Section's participation and they often address types of discrimination that may not be remediable through pattern or practice suits.

Suits initiated under this authority have involved, for example, allegations of harassment, retaliation, involuntary reassignment, failure to promote, discrimination on the basis of pregnancy or religion and unlawful discharge. In these cases the Section recently has obtained:

*\$250,000 and job opportunities to women who had been denied employment as janitors by a school district;

*\$27,900 in back pay, compensatory damages and pension benefits to a victim of religious discrimination;

*\$66,270 in back pay and damages and an employment opportunity to a female who was denied a craft job with the Alabama State Docka Department;

*\$100,000 in compensatory damages to a victim of racial harassment by the Spring, Texas, Independent School District;

*\$10,000 in back pay to a victim of religious discrimination by the Virgin Island Housing Authority;

*\$40,000 in back pay to three victims of race discrimination and retaliation by the Beaumont, Texas, Housing Authority.

The Section issues letters of right-to-sue to individuals who have filed charges of employment discrimination under Title VII and Title I of the ADA against state or local government employers with the EEOC. The number of requests for right-to-sue letters has increased from approximately 2,700 in 1993 to almost 5,000 in 1996.

Another important aspect of enforcing Title VII and addressing ongoing employment discrimination is the Section's commitment to monitoring compliance with over 100 extant pattern or practice decrees; seeking supplemental relief or orders to enforce; and, where necessary, defending third party challenges to their efficacy and lawfulness. The Section devotes substantial resources to this effort because it is important that a consent decree and the law be complied with.

The Section also is responsible for representing federal agencies in litigation that challenges the lawfulness of their administrative actions. The Supreme Court's decision in *Adarand Constructors, Inc. v. Peña*, 115 S.Ct. 2097 (1995), established a new standard by which the lawfulness of federal affirmative action programs that provide a racial preference are to be evaluated. Approximately 15 lawsuits and other matters that raise Adarand issues are being handled by the Section. The Section has had to devote considerable resources to this aspect of its program, which has detracted from its ability to initiate Title VII litigation. The federal agencies involved in this litigation are: the Departments of Defense, Transportation and Commerce, the Small Business Administration, the Environmental Protection Agency, and NASA.

The Section is also responsible for representing the Department of Labor in challenges to its authority to enforce effectively Executive Order 11246, Section 501 of the Rehabilitation Act of 1973, and the Vietnam Era Veterans Readjustment Assistance Act of 1974.

For the remainder of 1997 and 1998, the Section will continue to review referrals of individual charges from the EEOC for litigation and where the Assistant Attorney General so authorizes, initiate litigation based upon patterns or practices of discrimination. The Section will also, to the extent resources permit:

- *seek to identify patterns or practices of illegal discrimination against minorities and women in the selection, assignment and promotion of elementary and secondary school teachers, staff and administrators;
- *seek to identify patterns or practices of illegal discrimination against minorities and women in government facilities or agencies that deal with the public, such as public utilities and mass transportation systems; and,
- *seek to identify illegal discrimination against minorities and women in mid- and upper-level promotions and other glass ceiling issues in public safety, transportation and public utilities industries, among others.

The Section will continue to enforce its extant court orders, pursue investigations already underway, initiate suits based upon individual charges referred, prosecute on-going litigation, and defend federal agencies that may be sued in federal court for enforcement of civil rights laws.

1998 Estimate	23	22	2,745
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Section enforces Executive Order 12250, which directs the Attorney General to coordinate the enforcement of the various civil rights statutes that prohibit discrimination in federally assisted programs. The Assistant Attorney General directs the Section to coordinate the enforcement of these statutes with the various Federal agencies that administer programs that provide technical assistance, training and other assistance to State and local governments and private organizations. These recipients, in turn, operate programs that deliver services and benefits to individuals in broad and diverse areas that impact the lives of all Americans, such as education; health care; social services and welfare; transportation and infrastructure; natural resources and the environment; parks and recreation; agriculture and nutrition; housing and community development; employment and job training; and law enforcement and the administration of justice. Each Federal agency is responsible for assuring that its recipients do not discriminate in their use of Federal funds. The Section provides policy guidance, coordination, technical assistance, and training, in order to assure the effective and consistent enforcement of these grant-related statutes and to eliminate overlap and duplication where it may occur.

The Section coordinates the enforcement of two major statutes: Title VI of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color, or national origin in federally assisted programs, and Title IX of the Education Amendments of 1972, which prohibits discrimination on the basis of sex in federally assisted education programs. In addition, the Section coordinates the enforcement of the nondiscrimination provisions of more than 60 program-specific statutes that prohibit discrimination on the basis of race, color, national origin, sex, or religion.

The Section also undertakes administrative enforcement activities to strengthen the Department of Justice's (DOJ) enforcement of these statutes in its own federally assisted programs. Under an agreement with the Office of Justice Programs (OJP), the Section conducts compliance reviews and investigates complaints of discrimination in services on the basis of race, color, national origin, sex, religion or age against DOJ recipients. The Section provides extensive outreach and technical assistance to make DOJ funding components (as well as their recipients and beneficiaries) aware of their rights and obligations under the grant-related civil rights statutes.

In 1996, the Section strengthened its liaison program with the 27 funding agencies by holding individual and cluster meetings to review their programs, solicit their suggestions, and identify technical assistance, policy development, and training needs. An Executive Order 12250 Advisory Group, consisting of representatives from 15 of these agencies, was established to identify issues and give recommendations and advice to improve governmentwide enforcement efforts.

The Section's information and outreach activities in 1996 were directed toward revitalizing the enforcement of Title VI. The Section produced and distributed a 60-second radio public service announcement (PSA), in English and Spanish, that described what Title VI covers and how discrimination VI complaints can be filed. The PSA was recorded by two well-known media personalities and was distributed to 600 African-American, Hispanic, and other minority-market radio stations.

The Section developed an "all-purpose" government-wide Title VI brochure (both in English and in Spanish) for recipients and beneficiaries that was distributed nationwide with the assistance of civil rights organizations and networks. The Section continued the publication of the Civil Rights Forum, a quarterly newsletter of information on policies, practices, and legal and programmatic developments for a readership of 6,000 federal civil rights personnel, civil rights and community organizations, and interested members of the public. The Section continued to exhibit at national conventions of civil rights, community, and beneficiary groups, where it provided material and information about the Division's enforcement activities.

The Section provided training in 1996 to civil rights and program staff representing 20 Federal agencies and their components, and to officials from the State of Tennessee. The Section also has provided legal and policy interpretations and technical assistance to individual agencies. For example, the Section provided substantial assistance to the Environmental Protection Agency in identifying Title VI issues relevant to the environmental justice initiative. The Section also provided assistance to the Department of Transportation in its investigation of a complaint that raised new and novel Title VI issues relating to municipal transportation systems. The Section also related previous actions to Department of Agriculture, Department of Commerce, and Small Business Administration regarding Title VI issues and policy concerns were identified. In addition, the Section provided policy interpretations on an ongoing basis in response to agency requests. These interpretations encompassed everything from whether an agency's data

request to a recipient is allowed by the Department's Title VI coordination regulation to whether a grant can be made if an applicant declines to sign a nondiscrimination assurance form.

The Section undertook similar activities to strengthen the enforcement of Title VI and related statutes in DOJ's own federally assisted programs. The Section participated in the DOJ police misconduct task force established in 1996 to coordinate the enforcement of civil laws addressing police misconduct and is assisting in setting policy direction and establishing investigative approaches in the new area of DOJ enforcement. Under a memorandum of understanding with the Office of Justice Programs, the Section began to receive and investigate complaints in 1996 that alleged services discrimination by law enforcement agencies that are recipients of funds from the Department of Justice.

The Section conducted a systematic series of meetings with DOJ funding components and organizations representing DOJ recipients and beneficiaries in 1996 to increase their awareness of their rights and responsibilities under these statutes. The Section also established a procedure with the Division's Criminal Section for the early identification of potential Title VI issues in complaints filed with that Section, and reviewed more than 300 closed Criminal Section files to determine if these complaints also raised Title VI issues.

The Section continued in 1996 to participate in several intradepartmental and interagency initiatives involving the grant-related civil rights statutes. These activities included the DOJ Post-Adarand working group review of federal affirmative action programs and the DOJ environmental justice working group. The Section also participated in National Performance Review (NPR) activities that addressed civil rights regulatory and enforcement reengineering at the Department of the Interior, and provided advice to the interagency NPR regulatory review project regarding the civil rights implementing regulations of federal funding agencies.

During 1997 and 1998, the Advisory Group will continue to provide advice and assistance in identifying program implementation, policy development, and training and technical assistance needs. The Advisory Group also will provide advice and assistance in developing and assessing initiatives to meet those identified needs.

In 1997, the Section will issue a two-part Title VI Compliance Manual, which will include a legal section, a how-to program compliance section, and a case studies section. The manual will also include an investigative procedure and record-keeping section. These documents will provide the foundation for "advanced" training for agencies in 1998 that builds upon previously offered "basic" instruction.

The Section will develop a series of policies and legal documents in 1997 that address major issues identified with the assistance of the Advisory Group, including: (1) the enforcement of Title VI and related civil rights statutes in block grant programs; (2) Title VI requirements for providing services in languages other than English; (3) the availability of compensatory damages in administrative proceedings; (4) the implementation of the Attorney General's pattern or practice authority contained in block grant statutes; and (5) Title VI coverage in the selection of procurement contractors. These policy initiatives will lead to follow-on training and technical assistance to federal agencies and their recipients in 1998. The Section also will revise its previously developed model interagency delegation agreement and assess the performance of existing agreements in 1997, and broker the negotiation of new agreements for programs and agencies where appropriate in 1998.

The Section will evaluate and monitor Federal agencies' enforcement of Title VI and related statutes in 1997. The Section will review the agencies' 1997 enforcement plans, workload and performance data, and progress reports that will be prepared in response to the streamlined requirements issued by the Section in 1996. The Section also will conduct an "inter-agency review", a focused assessment of an individual agency's compliance program, and provide follow-up technical assistance to address identified needs, findings, and recommendations.

The Section will distribute a complaint form and a "questions and answers" publication explaining the requirements of Title VI and related statutes in 1997 to over 8,100 police departments that receive DOJ funds. In 1997 and 1998, the Section will investigate the increasing numbers of complaints of discrimination filed against DOJ recipients that are expected as a result of outreach activities begun in 1996. The Section anticipates that several additional memorandums of understanding (similar to the agreement with OJP) will be negotiated in 1997 and 1998. It also is anticipated that the Section's investigation and compliance review workload will increase as the police misconduct initiatives developed by the DOJ task force in 1996 are implemented in 1997 and 1998.

Housing and Civil Enforcement			
1997 Availability	98	95	\$ 9,978
1998 Base	98	95	10,210
1998 Estimate	28	22	10,222
Increase/Decrease

BASE PROGRAM DESCRIPTION: Staff in this Section enforces federal statutes prohibiting discrimination in housing, consumer credit, and public accommodations. Enforcement responsibility in this area includes:

-- The Fair Housing Act of 1968, as amended by the Fair Housing Amendments Act of 1988. The 1968 Act prohibited discrimination in housing on the basis of race, color, religion and national origin. In 1974 this was amended to add sex as a protected class, and the Fair Housing Amendments Act of 1988 further added disability and familial status as protected classes. The 1988 Amendments Act also substantially expanded the Section's enforcement authority to combat housing discrimination by enabling it for the first time (1) to initiate cases, after referral from the Department of Housing and Urban Development (HUD) on behalf of individuals who have been discriminated against; and (2) to seek both actual and punitive damages for aggrieved individuals in both the HUD referred cases as well as in the pattern or practice cases the Section has had authority to bring since 1968, as well as civil penalties of up to \$50,000 per defendant in the pattern or practice cases.

-- The Equal Credit Opportunity Act, which prohibits discrimination on the basis of race, color, religion, national origin, sex, marital status, age, or on the basis that an applicant's income is from public assistance, in all credit transactions; and

-- Title II of the Civil Rights Act of 1964 which prohibits discrimination on the basis of race, color, religion or national origin in certain public accommodations, such as restaurants, hotels and motels, and places of entertainment.

Most of the Section's enforcement activity focuses on enforcement of the Fair Housing Act. After the 1988 Amendments to the Act, which became effective in 1989, enforcement activity of the Section increased dramatically. In 1994, the total number of filings was 1,041, an increase from 741 in 1993. In 1995, an extraordinary ten times what it was in 1988 prior to the Amendments when the Section typically initiated 20-25 case filings, of which 15-20 were filed pursuant to the Fair Housing Act. In 1995, the number of case filings fell to 133 and in 1996 continued to fall to 62 cases for the reasons discussed below.

A major portion of the increased enforcement activity since 1989 has been the result of referrals required by the 1988 Amendments of cases involving individual cases of discrimination from the Department of Housing and Urban Development (HUD) which require case filings by the Section--known as election cases because the Act permits parties to such HUD proceedings to elect to have HUD findings of reasonable cause litigated in federal court. Like the total number of case filings, the number of these non-discretionary case filings initially increased dramatically after 1989--increasing from 21 such filings in 1990 (the first full year of implementation of the amended Act) to 155 such filings in 1994. Since then, there has been a marked decrease in the number of such filings -- 114 in 1995 and then 37 in 1996. We have no control over this reduction in referrals from HUD, but believe it is primarily the result of (1) more complaints of housing discrimination being handled by state fair housing agencies in lieu of HUD, as more state fair housing laws are determined to be substantially equivalent to the federal law; and (2) administrative changes in the fair housing office at HUD in 1995-96.

The Section also has had discretionary authority since 1968 to bring broader, higher-impact cases when the Attorney General determines there is reasonable cause to believe that persons have engaged in a pattern or practice of illegal discrimination or have denied a group of persons rights guaranteed under the Act and such denial raises an issue of general public importance. In addition, the amended Act requires HUD to refer cases involving alleged discrimination in zoning and land use decisions to the Section which then has discretion as to whether or not to initiate a lawsuit. Because of their broader impact and the independent authority conferred on the Attorney General, the discretionary pattern or practice case filings are the highest priority of the Section and the most important that the it brings.

In recent years, many cases in this discretionary category have been developed as the result of the following important initiatives: (1) the fair housing testing initiative, established in 1992 to increase the ability of the Section to combat discrimination in all parts of the country; especially race and national origin discrimination; (2) the fair housing program design initiative, designed to increase the number of nationally recognized testing firms initiating this type of case; and (3) the Section's increased involvement in lending, referrals of matters from bank regulatory agencies which also have responsibility for enforcing the fair lending laws; and, (3) property insurance discrimination.

In its testing program, the Section employs fair housing testing coordinators who plan such investigations and have trained many persons in the Department who have volunteered to be testers. Testers are individuals who, without the intent to rent or buy a dwelling, pose as renters or purchasers for the purpose of collecting evidence concerning whether or not unlawful housing discrimination is occurring. Since the passage of the Fair Housing Act in 1968, fair housing testing has been a primary tool for gathering evidence of housing discrimination.

Since its creation in 1992, the testing program has generated 33 pattern or practice cases and proved to be a very cost effective enforcement tool. The relief obtained in cases brought on the basis of evidence gathered by the testing program has been very significant. At the end of FY 1996, 21 of the 33 cases have been successfully resolved through consent decree or after trial and over \$2.98 million has been awarded in these cases in the form of damages, civil penalties and other equitable relief designed to compensate for discrimination and promote fair housing. In FY 1996, the highest settlement in any of the testing cases -- \$462,500 -- was obtained.

The fair lending and property insurance initiatives involve some of the most complex investigation and litigation in the Civil Rights Division, and have required very significant resources. The fair lending initiative has had a very significant impact on improving lending opportunities for minorities. A *Hall of Fame* article published in early 1996 made note of this progress, emphasizing more vigorously the Section's enforcement program has been in the forefront of the federal effort. In the period from 1992 thru 1994, settlements of cases such as Decatur, Shalom, and Chevy Chase were noted nationally. Since then the lending industry has followed closely the Section's enforcement program. In FY 1996, five more lending cases were filed. Consent decrees obtained in the lending cases in 1996 have also continued to be very significant. The most significant settlements in 1996 were two in which \$4 million in monetary relief was obtained in each. One was against the Fleet Mortgage Co. for allegedly charging higher interest rates to minorities than to whites in some of their offices. The other was against the Long Beach, California Bank in which it was alleged that it had discriminated against African-Americans, Hispanics, the elderly and women in the pricing of their loans. Significant settlements were also obtained during FY 1996 in cases which also focused on discrimination in the pricing practices of banks (Huntington (Cleveland), and Pecos (Texas)).

Overall, the results of the Section's enforcement program have been very significant. Significant monetary relief was obtained over \$15 million in the cases resolved during FY 1996 while this was less than that year's total monetary award of \$18.5 million. High settlements were obtained in one of the testing cases, a property insurance case. In addition to the settlements in the lending cases and the record settlement in one of the testing cases, notable consent decrees obtained included a case alleging familial status discrimination against the operator of several mobile home parks in California (awarding \$2.2 million in monetary relief) and a case alleging race discrimination against a company with several apartment buildings in Mobile, Alabama (\$1.8 million -- the largest award yet obtained in race discrimination case involving discrimination in rental housing).

In 1997 and 1998, the Section will continue to place emphasis on initiating broad pattern or practice cases, primarily in the three high-priority programs discussed above. The bulk of the non-discretionary cases referred from HUD will continue to be handled by local U.S. Attorneys' offices pursuant to the Attorney General's 1993 directive designed to involve these offices in the responsibility for litigating fair housing cases. This program has been very successful. A smooth and efficient working relationship is now in place between the Section and the various U.S. Attorney offices, and we expect increased participation of these offices in fair housing enforcement in the future.

1988 Estimate	30	31	2,828
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Educational Opportunities Program enforces Federal statutes which prohibit discrimination in public elementary and secondary schools and public colleges and universities. Program enforcement responsibilities include:

Title IV of the Civil Rights Act of 1964, which provides that the Attorney General may initiate legal proceedings to further orderly desegregation (i) upon receiving a complaint from a parent that his or her minor children are denied equal protection of the law by public school officials; and, (ii) with respect to public institutions of higher learning, upon receiving a meritorious written complaint alleging that a student has been denied admission to or the opportunity to continue in attendance at a public college or university on account of the student's race, sex, national origin, color, religion;

Equal Educational Opportunities Act of 1974, which prohibits school officials from denying students equal educational opportunities (including students who may face language barriers) on account of race, color, national origin;

Section 504 of the Rehabilitation Act of 1973 and Title II of the Americans with Disabilities Act, which require that public school officials provide handicapped and disabled students appropriate educational opportunities, upon receiving a proper referral from the U.S. Department of Education, Office for Civil Rights (OCR);

Title VI of the Civil Rights Act of 1964, which prohibits public school districts that receive federal funds from discriminating on the basis of race or national origin in a program or activity, upon receiving a proper referral from OCR; and,

Title IX of the Education Amendments of 1972, which prohibits school districts that receive federal funds from discriminating on the basis of gender, upon receiving a proper referral from OCR.

The Program is also authorized to (i) intervene in private suits alleging the denial of equal protection of the law based on race, sex, national origin, color, or religion which the Attorney General determines raises issues of public importance; and (ii) represent the U. S. Department of Education when the Secretary is sued by public school districts, colleges, or universities against whom OCR may take enforcement action under one of its statutes.

The Program continues to maintain a large non-discretionary workload. In addition to actively monitoring and responding to complaints which require its immediate attention in several hundred elementary and secondary school districts, the Program devotes substantial staff time to several high profile, complex, statewide higher education cases which remain active. In 1995, Program attorneys conducted discovery and prepared a higher education cases against Alabama for further trial (Alabama III), conducted discovery and

negotiated a major settlement in a portion of a Louisiana case (Louisiana III), engaged in post-trial hearings and brief submissions in Mississippi (Mississippi I, II), and engaged in extensive discovery concerning a remedial case (Remedial I, II). In the past year, the program has been highly successful in obtaining high profile suits involving discriminatory admissions in Virginia (Virginia Military Institute VI, VII) and South Carolina (The Citadel). These cases involving higher education will continue to require substantial program resources until appropriate remedial measures are finally approved by the courts and successfully implemented.

In 1997 and 1998, the Program expects to focus a significant amount of its resources on systematically reviewing the 400-plus court ordered school districts on the active case docket. The purpose of this project is to seek compliance of those school districts that are in violation of their extant desegregation orders and to administratively close those districts that are in compliance, thus, removing them from our active case docket. This will involve reviewing hundreds, and in some cases, thousands of documents, contacting various community groups and visiting many of the districts. It is anticipated that such activity will increase the number of complaints from citizen and community groups, as well as prompt a number of districts to seek partial or full termination of their court orders. The latter actions will require more comprehensive investigations and may require an examination of data in six or more relevant compliance areas covering a period of many years.

In addition to this enforcement effort, the Program will give priority attention to focusing on violations that deny (i) educational quality to minority students and (ii) equal educational opportunities to women, languages minorities, and students with disabilities. This endeavor will involve the examination of differences in curriculum offerings among individual schools within school districts, review of student placement procedures, including tracking and ability grouping, and examination of student achievement data such as test scores for the hundreds, and in some cases, thousands of students in the affected school districts.

BASE PROGRAM DESCRIPTION: This Section carries out a multi-faceted approach toward achieving compliance with the Rehabilitation Act, the Small Business Regulatory Enforcement Fairness Act, and Executive Order 12250. The Section's enforcement activities include: (i) coordination, and technical assistance activities required by the ADA combined with an innovative mediation program and a technical assistance grant program, provide a cost-effective and dynamic approach for carrying out the ADA's mandates. The Section also carries out responsibilities under Section 504 of the Rehabilitation Act, the Small Business Regulatory Enforcement Fairness Act, and Executive Order 12250. Section activities affect 6 million businesses and non-profit agencies, 80,000 units of state and local government, 49 million people with disabilities, and over 100 other federal agencies and commissions in the Executive Branch.

The Section implements the Department of Justice's enforcement responsibilities under Titles I, II, and III of the ADA. Enforcement responsibilities cover a broad spectrum of potential actions to encourage

individuals and entities to comply with the requirements of the ADA. Once a complaint meets Section jurisdictional standards, an investigation is conducted to ensure there is sufficient evidence of a violation. If the investigation shows a violation of the law, negotiations with the respondent are initiated. Resolutions are sought through mediation, informal agreements, or formal agreements. Conciliation (approved by a court) or litigation. A decision on appropriate remedies or on conciliation and individuals or entities in violation of the ADA cannot agree on appropriate remedies or on interpretation of the law. Although litigation is resource intensive, it is an essential tool for credible and efficient enforcement to prevent discrimination against persons with disabilities.

The Section's responsibilities are somewhat different under each Title of the ADA. Under Title I, the Section is the only government entity with authority to initiate litigation against state and local government employers. Under Title II, the Section is responsible both for the coordination of Title II administrative enforcement by seven other agencies¹ and for the Department's own complaint investigation and compliance review functions. The Section initiates litigation under Title II that arises from its own investigations and upon referral from other Federal agencies. Under Title III, the Section initiates litigation where there is a pattern or practice of discrimination or discrimination involving an issue of general public importance involving public accommodations and commercial facilities.

In order to reduce reliance on litigation as an enforcement tool, the Section also operates a pilot project to facilitate the use of mediation to settle ADA disputes through its Technical Assistance Program, and the Section awarded grants to train professional and volunteer mediators in 27 cities. Complaints are now being referred to mediators to attempt resolution without litigation.

The Section, pursuant to Section 308 of the ADA, responds to requests from state and local jurisdictions seeking certification that their building codes meet or exceed ADA accessibility requirements. Certification preserves the traditional role of State and local officials in the implementation of building-related regulations, while at the same time furthering the Federal objective of ensuring uniform levels of accessibility for citizens with disabilities throughout the United States. The Section conducts a detailed analysis of each submitted code and provides extensive technical assistance to code officials developing ADA-equivalent codes. Prior to issuing a final certification determination, the Section provides public notice and conducts public hearings on its proposed certification. In addition, in response to requests by private sector organizations that are revising or developing model accessibility codes or consensus standards, the Section has also required the Section to develop a procedure analogous to the formal certification review, and provide extensive technical assistance to enable code officials to determine if the model code is, in fact, equivalent to the ADA.

The Section develops regulations to implement Titles II and III of the ADA. This activity includes participating in the development of the ADA Accessibility Guidelines, which form the basis for the Department's ADA Standards for Accessible Design, and using innovative methods to solicit comments from businesses, governments, architects, code officials, and the disability community.

¹ Departments of Agriculture, Education, Health and Human Services, Housing and Urban Development, Interior, Labor, and Transportation.

The Section has the responsibility pursuant to Executive Order 12250 to coordinate Federal enforcement of the Rehabilitation Act and other Federal statutes that prohibit discrimination on the basis of disability in programs that receive Federal financial assistance. In addition, the Section represents the Attorney General in her statutory role as a member of the U.S. Architectural and Transportation Barriers Compliance Board (Access Board). In this capacity, the Section not only participates in the continued development of ADA accessibility guidelines for entities subject to the Department's regulations, but also participates in the development of ADA guidelines for accessible transportation and Architectural Barriers Act guidelines applicable to Federal and federally-financed buildings.

The Technical Assistance Program, which is mandated under Section 504 of the ADA, promotes voluntary compliance with the ADA by providing free information and assistance to businesses, state and local governments, people with disabilities, and the general public. Each year, more than one million people are contacted through the program. The program has been successful in educating over 700,000 individuals nationwide; 75,000 calls a year; develops and disseminates ADA publications; provides ADA training at meetings and seminars; and conducts outreach to broad and targeted audiences that have included mayors, local Chambers of Commerce, and millions of businesses. With yearly updates, ADA-7A, a technical assistance series aimed at businesses, state and local governments, architects, and others explaining efficient ways to comply with the ADA; Question-and-Answer publications addressing specific topics; and other materials. These and the ADA regulations may be ordered from the Section or obtained electronically through the Section's electronic bulletin board or the Internet.

The Section coordinates ADA technical assistance government-wide, chairing an ADA Technical Assistance Coordinating Committee, conducting legal and technical reviews of materials developed by other agencies to ensure accuracy, and other initiatives.

Through its grant program, the Section works with trade associations and others to develop and disseminate materials tailored to meet the needs of specific audiences, including hotels and motels, restaurants, grocery stores, small businesses, builders, mayors and town officials, law enforcement, people with disabilities, and others. In 1995, two articles on the ADA were disseminated to 33 million elders through Modern Maturity magazine as part of a grant awarded to the American Association of Retired Persons (AARP). Materials developed through grants and the Section's technical assistance documents are also disseminated to state and local government officials aware of the ADA and the resources that are available to assist them in complying.

Many of the enforcement, regulatory, and coordination responsibilities described above were assigned to the Section pursuant to a reorganization that took effect on March 1, 1995. Responsibilities for enforcement of Title I (employment) and all the non-litigation functions under Title II were also placed with the Section. In addition, the Section was given responsibility for continued rulemaking under Titles II and III of the ADA and the responsibility to coordinate Federal enforcement of Section 504 of the Rehabilitation Act of 1973 and other Federal disability rights statutes.

In June 1996, the Section received new responsibilities under the sections 212 and 213 of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104-121, 110 Stat. 847), to publish Small Entity Compliance Guides and to provide "informal small entity guidance" upon request. The new mandate requires

that each agency that regulates small entities to establish a program to "answer inquiries by small entities concerning information on, and advice about, compliance with such statutes and regulations, interpreting and applying the law to specific sets of facts supplied by the small entity."

The Section components work together to promote compliance with the ADA in a cost-effective manner. The Section attempts to avoid costly litigation by resolving complaints informally through informal on-site mediation. In addition, the Section provides technical assistance to state and local governments, private businesses and state and local governments access to information that assists them in avoiding costly mistakes and developing cost-effective approaches for complying with the ADA. Code certification will increase the number of buildings that are constructed in compliance with the ADA's requirements, and costly litigation will be avoided.

PROGRAM CHANGES:

	POS.	FTE	AMOUNT
Disability Rights ADA Enforcement	7	4	\$477

ADA Enforcement

A program increase of \$477,000, seven positions and four workyears (four GS-12 investigators, two GS-13 mediators, and one GS-13 architect) is requested to handle an increasing workload. The additional personnel will enable the Section to more effectively and efficiently address an increasing number of ADA-related complaints, and meet the following objectives:

- To ensure that complaints and other situations evidencing noncompliance are resolved through informal means such as negotiation, mediation, or informal settlement agreements, when those methods appear to be the most appropriate way to resolve a particular inquiry or complaint; and,

- To resolve an increasing number of complaints and other situations evidencing noncompliance under both Titles II and III of the ADA.

The Section seeks the seven permanent positions to solidify and streamline its enforcement of Titles II and III of the ADA by having four more investigators to evaluate, investigate, and respond to complaints; two mediators to assist in the resolution process by actively working with the complainant and the responsible entity to informally resolve complaints, and one architect to provide professional and technical consultations in the resolution process.

Currently, the Section is turning away over 80% of complaints received under Title III, and continues to fall behind in the processing of Title II complaints. We continue to see an increase in complaints against public accommodations and state and local governments. For example, we predict our backlog of pending investigations will go from approximately 2600 in FY 1996 to 3600 in FY 1998. Our current resources allow us to handle a limited number of this increase. If we can increase resources for investigations a greater number of complaints can be settled informally or through mediation, rather than litigation.

By FY 1998, the Section expects four trends: 1) an increasing number of pending title II and title III complaints, including ones from prior years that were not handled due to staff limitations; 2) an increasing number of businesses and government agencies that are complying voluntarily with the ADA, setting an example of compliance that is expected by the public in ensuring that they or their friends and relatives with disabilities have a fair and equitable opportunity to be included in the workforce; 3) a variety of standard settlement agreements or suggested informal resolutions for particular types of complaints; and, 4) well-developed policy and procedures for alternative dispute resolution.

BASE PROGRAM DESCRIPTION The Office of Special Counsel for Immigration-Related Unfair Employment Practices (OSC) was created by the Immigration Reform and Control Act of 1986 (IRCA), an amendment to the Immigration and Nationality Act (INA). From its inception in 1987 until March 1994, OSC operated as a separate component of the Department charged with enforcing the antidiscrimination provisions of INA. In 1994 OSC merged with the Civil Rights Division. The merger was consistent with the Attorney General's efforts to consolidate civil rights policy in the Department and did not alter OSC's mission.

The antidiscrimination provisions of INA are a counterbalance to potential discrimination by employers that could result from the INA's employer sanctions for knowingly hiring an illegal worker. The balance of implementing employer sanctions while prohibiting discrimination against work authorized aliens and U.S. citizens, is upset when an employer is overzealous in attempting to prevent the employment of undocumented workers. Too often this means that "foreign" looking or "foreign" sounding individuals are subjected to different treatment by employers.

Pursuant to 8 U.S.C. 1324b, OSC investigates and prosecutes cases of discrimination in hiring, firing, or referral for a fee based on an individual's citizenship status or national origin. Section 1324b covers all employers with four or more employees. However, OSC does not have jurisdiction over national origin claims already covered by title VII, i.e., employers with 15 or more employees.

National origin discrimination consists of unequal treatment because of a person's place of origin or because that person has certain physical, cultural, or linguistic characteristics of a particular national origin group. All individuals except unauthorized workers are protected against national origin discrimination.

Discrimination based on citizenship status consists of employers making distinctions among workers in the context of hiring, firing, or referral for a fee because of their citizenship or immigration status. Citizenship status discrimination is permitted only under narrow circumstances: namely, when required to comply with governmental regulations.

Section 535 of the Immigration Act of 1990 ("IA90") added retaliation to the prohibitions on discrimination enforced by the Special Counsel. Specifically, the amendments to INA prohibited retaliation against

individuals for exercising their rights under the statute. Additionally, IA90 made document abuse, i.e., requesting more or different documents than necessary for employment verification purposes or refusing to accept valid documents, an unfair immigration-related employment practice. Document abuse is the most common type of charge handled by OSC and all work authorized individuals are protected. For example, in October 1996, OSC negotiated a settlement agreement with Wal-Mart Stores, Inc. ('Wal-Mart') of a complaint which alleged that one of its locations had engaged in a pattern or practice of requiring aliens to produce INS-issued documents in addition to a driver's license and social security card which OSC alleged it was requiring of all employees for its purposes. The settlement agreement also covered an on-going OSC investigation of Wal-Mart's employment eligibility verification practices across the country. The terms of the agreement required Wal-Mart to pay \$30,000 to OSC to implement an OSC-approved nationwide I-9 training program for its hiring personnel and to allow OSC to conduct its employment eligibility verification practices at various Wal-Mart locations throughout the country.

On September 30, 1996, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA) amended the Immigration and Nationality Act's Section 2748(a)(6). Under the new law, in order to constitute document abuse an employer's request for more or different documents must now be shown to have been made for the purpose or with the intent to discriminate based on the worker's national origin or citizenship status.

OSC continues to work closely with our grantees, especially in California, to combat the lingering effects of the passage of Proposition 187, as well as the more recent effects of the passage of Proposition 209, on the mindset of legal immigrants. These efforts include increasing public awareness of employees' and employers' rights and responsibilities under INA's antidiscrimination provisions through public education campaigns. Furthermore, while development of the protocol for the I-9S pilot II is still underway, OSC will continue to work with INS on the development of that project, as well.

OSC coordinates with officials of the Equal Employment Opportunity Commission (EEOC), the Immigration and Naturalization Service (INS), the Department of Labor, other federal and state agencies and community-based organizations to ensure uniform and effective enforcement of INA's antidiscrimination provisions. Additionally, OSC provides legislative counsel to other programs within the Department and to other federal agencies.

With respect to charge referral, in addition to its memorandum of understanding (MOU) with the EEOC, OSC has entered into MOUs with numerous state and local human rights agencies throughout the country. These MOUs are very basic referral agreements aimed primarily at gaining the opportunity to increase awareness among state and local government personnel of OSC and the INA's antidiscrimination provisions. On January 8, 1997, OSC and the Department of Labor's Office of Federal Contract Compliance Programs (OFCCP) entered into a MOU to facilitate coordination of antidiscrimination enforcement and joint public outreach activities. This agreement will allow each agency to fulfill its enforcement responsibilities in a more cost-efficient and effective manner.

OSC promotes awareness of INA's antidiscrimination provisions through public outreach efforts including: an annual nationwide grant program; media advertising; training; publications; and, participation in conferences and cooperative activities involving public and private groups. The 1990 Immigration Act extended to the Special Counsel specific statutory responsibility for the development of a nationwide public education campaign.

OSC's main public education activity is its annual grant program for nonprofit organizations throughout the country for the development and implementation of public education programs designed to address the unique needs of communities with high alien and minority language populations.

OSC's public education activities also include a national outreach campaign through a private contractor which has aired television and radio announcements nationwide, as well as produced and distributed materials in many languages. In 1996 OSC conducted: 1) three national print and radio public service announcement campaigns; 2) prepared a calendar for our grantees of all the business association conventions taking place throughout the country; and, 3) worked with the appropriate state agencies to have Section 1324b information included in their new business start up packets. Main projects for 1997 include national and targeted regional media campaigns as well as dissemination of information packets to state agencies and trade/professional associations.

Attorneys from the Special Counsel's Office make numerous presentations to interested groups across the country regarding the anti-discrimination provisions of IRCA. They have spoken before employer groups, community based organizations, state fair employment agencies, bar associations and others. On occasion, they appear on radio talk shows. In 1996, OSC attorneys made 70 public appearances.

Additionally, OSC maintains liaison with nearly a dozen federal agencies and has continued aggressive outreach to inform public interest and community groups, as well as INS offices and legal aid centers, of the Employment Opportunity Commission (EEOC) and Section 1324b. OSC has also worked with the EEOC-sponsored Equal Employment Opportunity Commission (EEOC) providing speakers at the EEOC-sponsored Technical Assistance Program Seminars (TAPS) for employers which are held twice a year by each EEOC district. At many OSC-sponsored education seminars, EEOC speakers are included in the agenda.

In 1997 and 1998, OSC will focus investigative resources on illegal discrimination against lawful immigrants in hiring and firing based on national origin and/or citizenship status. OSC will also address barriers to employment facing legal immigrants and "foreign looking" individuals in the employment verification process, and develop methods and arguments for meeting the new law's requirement of proving employers intended to discriminate against workers because of their national origin or citizenship status.

OSC will continue to coordinate antidiscrimination enforcement objectives with other government agencies through memoranda of understanding that will make more effective use of the Office's investigative and prosecutorial resources. Further, OSC will continue to improve our working relationship with both INS and EEOC. OSC will continue to coordinate with INS on matters relating to the implementation of the Public Law 104-208, the Immigration Reform and Control Act of 1986. OSC will also continue to enhance enforcement and outreach activities through a concerted effort to maintain and further develop ongoing communication with community-based organizations, state and local government agencies, and other pertinent entities, and continue to improve the routine review of outreach projects to ensure that they provide information effectively to those impacted by the program.

1998 Estimate	72	88	10,546
Increase/Decrease	10	5	2,018

This budget activity includes resources for Executive Direction and Control (which includes the Office of the Assistant Attorney General and the Administrative Management Section) and Redress Administration.

Executive Direction and Control

BASE PROGRAM DESCRIPTION: The Assistant Attorney General and Deputy Assistant Attorneys General establish policy and provide executive direction and control over litigation enforcement and administrative activities of the Division. Each of the Deputy Assistant Attorneys General oversees specific program-related sections.

The Administrative Management Program provides a diverse array of management and technical services. These services include, but are not limited to, personnel administration, procurement, budget formulation and execution, litigation support, facilities services, mail and file operations, and automated systems.

Significant accomplishments in 1996 include:

- completion of ADP infrastructure improvements that included replacement or upgrade of microcomputers and printers required by the Department's new office automation system, Justice Consolidated Office Network (JCON);
- re-engineered the Geographical Information System (GIS), resulting in improved performance and expanded analytical capabilities, and secured the award of a new five-year GIS support contract;
- conducted a study of the Section 5 submission process (Voting Section) to prepare for implementation of a document imaging system to replace out-of-date microfiche equipment that will no longer be manufactured or supported after the end of calendar year 1996;

began implementation of a digital document imaging system to handle Section 5 submissions in the Voting Section; in addition to solving the mission-critical problem of relying on unreliable and obsolete microfiche equipment for Section 5 analyses, the new imaging system will function as a prototype in expanding imaging technology to the whole Division via the JCON system;

initiated the redevelopment of a sophisticated and critical Voting Section 5 case tracking application consistent with the migration of systems from the Data General-based automated office system environment to windowed Unix platforms preparatory to the new JCON contract;

developed a correspondence tracking system for one Section within the Division, consolidated and extended the application to two other sections as part of the prototype, and have begun to redevelop the application with a graphical user interface compatible with the JCON environment prior to implementation throughout the Division; and,

began the long-overdue modernization of the Division case management system, including the development of new hardware and software platforms, requirements analyses, data cleanup, conversion and up-to-date application documentation, which will yield more reliable data and greater access for Division users.

During the period, the Division updated its risk analyses, contingency plans and system security plans for the Geographic Information System (GIS), the Japanese American Redress Verification Information System (JARVIS), and the Litigation Support Network (LSN) with the assistance of Keane Federal Systems, Inc. An AMICUS II+ Dial-in Security Assessment was also performed with Keane's assistance. All of the security reviews found that the Division's computer security was adequate. The contractor made a number of suggestions of low to no cost improvements that could be made to ensure even greater security.

The Administrative Management Program also contains the Freedom of Information/Privacy Act (FOI/PA) Branch. The Branch's principal function is to ensure that the Division complies with all aspects of the Freedom of Information and Privacy Acts. The Branch also provides procedural guidance to citizens and legal counsel to other programs of the Civil Rights Division regarding FOI/PA requests and coordinates and represents the Division's interests in FOI/PA litigation and in the administrative appeals of request denials.

The projected workload of the FOI/PA Branch on requests (without regard to appeals and litigation) continues to increase and may reach very near 1,200 requests for the 1998 period. Based on the last 12 months'

statistics, the Division's annual number is now over 1000 incoming FOI/PA requests. In 1996, the FOI/PA Branch was able to respond to the record levels of incoming numbers with unprecedented numbers of closings made possible by overtime and by contractor support. As of December 31, 1996, the FOI/PA Branch reduced its backlog by 22% from the peak reached immediately after the furlough (from 383 to 298). This was achieved by a focus on responding to requests that involved the fewest number of documents. Even though approximately 20% of the Branch resources were directed towards requests involving large amounts of documents, the Branch fell behind significantly in responding to voluminous requests in an effort to reduce the total numbers of pending requests. Further reductions in the backlog are unlikely until the Branch is able to close out more of the larger volume requests. Additionally, resources used in 1996 to assist the unit in addressing the backlog are no longer available as a result of the cumulative effect of reductions to the Division's base funding level.

**Growth in Volume of CRT
Incoming FOI/PA Requests (1981-1996)**

Note: Backlog numbers are generally understated for various reasons, i.e., request appealed, reopened or litigated.

Redress Administration

BRIEF PROGRAM DESCRIPTION: The Civil Liberties Act of 1988 (P.L. 100-383) (the Act) assigned the Attorney General responsibility for implementing section 105. The Act provided that payments of \$20,000 each be made to eligible individuals of Japanese ancestry who were evacuated, relocated, or interned by the United States Government during World War II. To carry out these responsibilities, the Office of Redress Administration (ORA) was created within the Civil Rights Division.

ORA's workload includes making eligibility determinations on the remaining unique cases, and disbursing payments to eligible individuals. ORA has disbursed over 97 percent of the \$1.645 billion available, representing 80,120 cases. Additionally, ORA continues to monitor a helpline and respond to correspondence from individuals inquiring about the status of their claim. ORA continues its aggressive outreach efforts in the Japanese-American community, which have included several workshops around the country, and regular contact with community leaders through monthly updates and press releases. ORA also distributes pamphlets and other materials to the public with information regarding the redress program and unknown individuals.

ORA's goals for 1997 and 1998 include locating the remaining 3,100 individuals for whom ORA has been unable to gather current information in relation to ORA's historical records. ORA is required by the Act to account for each of these individuals. ORA also plans to make final legal determinations on approximately 400 unique cases. In addition, ORA will continue developing a phase-down plan for its operations, as the program has a sunset date of August 1998. All computerized and hard-copy historical records relating to the internment period will be archived as part of this plan.

A July 6, 1995, Federal Appeals Court reversal in the case of Douglas L. Ishida v. United States will affect the eligibility of nearly 1,300 cases. Based on the adverse court decision substantial manpower support will be required to review these cases since approximately 3,000-5,000 other individuals, not currently identified, may file similar claims.

Further, another lawsuit, Marion Kanemoto, et al. v. William Barr, et al., No. C92-20610, was filed on March 22, 1995. This case involves 14 plaintiffs who were minor children during the war and who were relocated to Japan with their parents. The Act excluded from eligibility any person who returned to Japan during the war. However, based on the Department's new legal interpretation of this statutory language that only those persons who returned voluntarily are ineligible, the minor children who returned involuntarily to Japan are now eligible for redress. Thus the lawsuit was stayed and regulations were finalized to make this category of claimants eligible. This regulation made about 130 current claims eligible for redress. ORA is unable to project the number of additional eligible persons, who have not yet contacted ORA, because of the lack of dates of birth on some of the historical records, but may have as many as 200 additional cases not currently identified.

PROGRAM CHANGES:

	Pos.	FTE	Amount
Management and Administration			
Electronic Freedom of Information Act	10	5	\$2,018

The Civil Rights Division requests a program increase of \$2,018,000, ten positions and five workyears (two GS-12 attorneys, one GS-12 computer specialist, six paralegals (two each at the GS-7, GS-9 and GS-11 levels), and one GS-7 secretary) to enable the Civil Rights Division's FOI/PA Branch to meet the significant increase in its responsibilities under the Freedom of Information and Privacy Acts. The funding request also includes the resources necessary for the Division to acquire a centralized scanning system and compatible technology that will enable us to address the continually increasing high volume of FOIA requests and meet the requirements of the recently-enacted Electronic Freedom of Information Act.

The increases in FOI/PA processing demands are a result of several factors including new legislation, Division responsibility for new programs, and increases in prosecutions among all Division traditional enforcement responsibilities. The enforcement of the American with Disabilities Act (ADA) has resulted in the largest portion of the increase of the FOI/PA requests. Business entities, non-profit organizations, law firms specializing in ADA matters as well as the general public are requesting volumes of material related to ADA enforcement. Other statutes such as the Violent Crime Control and Law Enforcement Act, the Civil Liberties Act of 1988, and the Immigration Reform and Control Act have all added significantly to the growing level of incoming requests. The program increase is reflective in what has been a correlative rise in the volume of FOI/PA requests. Growth in incoming requests is expected to continue at the rate of 5-10% per year. At the current rate of increase, incoming totals of 1100-1200 FOI/PA requests are anticipated by 1998. [The Division received over 1000 FOI/PA requests in the most recent 12 month period.] The additional resources requested will also assist the FOI/PA Branch in meeting the requirements of the "Electronic FOIA" passed in 1996 and the resulting increases in requests for information consistent with the intent of the law.

Given current staffing levels, existing office equipment, and the increased numbers of incoming requests, the Division expects backlog levels to consistently exceed 500. Even if the Division maintains its production rate at the same level accomplished in 1996, resources will not be sufficient to counter the increased demand in routine requests, and to address large volume labor-intensive requests. Without additional funding the Civil Rights Division will be unable to meet the goals and the legislative intent of speedy access to federal agency records via the Freedom of Information Act as envisioned by the sponsors and supporters of the "Electronic FOIA." The "Electronic FOIA" provides many new administrative challenges, however, the most significant challenge will likely be the new "exceptional circumstances" definition provision. This provision will put the public on notice by the statute overruling court decisions that were

generally sympathetic to agency backlogs in the context of inadequate resources. Requestor lawsuits will likely be filed with the expectation of summary judgments in favor of plaintiffs for immediate access against agencies with backlogs.

The FOIA imaging system will be an Oracle network based imaging system. It will consist of 12 new JOW PCs with 21 inch monitors, four scanning/OCR workstations. A sixty-two user license will be purchased for FOIA and other Division users. The system will be linked to the existing case management database management system (dbms). Hardware requirements will include a network server, image storage devices, CDROM burners, and upgrades to existing workstations.

The initial conversion will require over 750,000 pages to be scanned and coded as well as converting over 400,000 pages of existing microfilm. Once all hard-copy paper has been scanned, coded, and quality controlled, FOIA will be able to respond to the demands of the "Electronic FOIA" passed in 1996.

Lastly, a home page will be developed on the Internet, consistent with the new legislation, enabling citizens to access information generated by the FOI/PA branch.

As reflected in the chart below, the high volume of FOI/PA requests closed during 1996 was a result of contractor assistance and overtime. Funds used in 1996 to address the workload demands of the FOI/PA Unit are no longer available; hence the decline in 1997 productivity. Projections for 1998 thru 1999 assume approval of the program increase requested in 1998.

Growth In Volume of CRT
Incoming FOI/PA Requests (1995-1999)

A. Definitions of Terms or Explanations for Indicators:

#1. Cases: Supreme Court and courts of appeals cases in which the Division is a party or *amicus*.

Matters: Work performed on legal issues principally handled by other Divisions and federal agencies, internal research assistance, and cases we consider but decide not to participate in.

#2. Substantive papers: Non-procedural filings or applications to courts requesting an order or ruling affecting either the "Intermediate Outcome" or "End Outcome" of the case. The subcategories of briefs and substantive papers (e.g. *amicus* brief, appellate brief, brief as respondent) do not include filings as a party (petitioner/appellant) in the Supreme Court or courts of appeals. The following definitions are provided for only the briefs indicated on the Performance Measurement Table (PMT).

Amicus Brief: A document filed with the court's permission by one who is not a party to the lawsuit and provides information and argument to aid a court in reaching a proper decision or to urge a particular result. *Amicus curiae* means "friend of the court."

Appellee Brief: A document filed in an appellate court by the prevailing party in the court below arguing against setting aside the judgment. This document is filed in response to brief filed by the Appellant.

Respondent Brief: An answer or response to a application to review a prior judgment. In this instance, review of a decision by an administrative law judge.

#13. Recommendations to the Solicitor General: Memoranda to the Solicitor presenting the unit's legal judgment for or against an appeal, petitions for certiorari, or amicus participation.

#17. HUD Enforcement Actions: Cases involving judicial enforcement of final administrative orders.

#18. Legal Counsel and Research Assistance: Formal comments (written and oral) to other Divisions, agencies, or the Solicitor General concerning cases handled by others, as well as other legal and policy memoranda not connected with a particular Division case, prepared at the request of the Assistant Attorney General.

#19. & #10. Non-Merits Decisions: Determinations of courts which do not affect the substance of a litigant's claim. These decisions are made on procedural motions and can be immediate or final in result. See #13 & #14 for "End Outcome" non-merits decisions in which the Supreme Court denied certiorari or stay, and the courts of appeals denied stay.

#19a. Certiorari: A means of obtaining review by the Supreme Court.

#19b. & 10b. Stay: A postponement by the court of the right of the winning party to enforce its judgment.

#10a. Rehearing: Reconsideration of the issues by the same court.

B. Factors Affecting FY 96 Program Performance.

Categories reflect increases over fiscal years due to significant increased litigation in the Voting Rights and Housing areas. There has been a slight increase in the number of criminal prosecutions we continue to defend. Appellate Activity is contingent upon the level of activity in the trial sections of this Division, and in the Office of General Counsel of the Department of Housing & Urban Development. See also, Section "C" for other factors affecting actual figures or estimates.

C. Factors Affecting Selection of FY 97 and 98 Targets.

Estimates or projections for future years in all categories are based on considerations of staffing, production in previous years, and the level of activity in the trial sections. It should be noted, however, that the work of this Program is closely correlated to the Output/Activity of litigative programs, and that its Supreme Court activity is dependent upon the types of cases which the Court decides to hear.

A. Definitions of Terms or Explanations for Indicators:

Item 1--This figure reflects the total of Items 1(a) and 1(b).

Item #1(a)--The 'Number of Complaints Received from Citizens' includes letters received from citizens as well as telephone complaints received and controlled mail referred from the White House, Congress and the Attorney General for review and response.

Item #1(b)--The 'Number of Complaints Received from the FBI' includes less serious, non-brutality complaints called '017s' that are reviewed by paralegals. The remaining complaints are FBI investigations ('Matters Investigated' Item 3) which are assigned to attorneys.

Item #2--This figure includes the total of all forms of complaints reviewed by the Program including FBI investigations, citizen complaints, citizen calls and controlled correspondence such as letters from Congress and the White House as well as letters addressed to the Attorney General. This total may exceed the number of complaints received because it includes complaints received during prior fiscal years.

Item #3--This figure includes investigations conducted by the FBI and referred to the Program for prosecutive review as well as complaints received directly by the Program and referred to the FBI for investigation. This figure is included in 1(b) above with the difference of 3 from 1(b) equaling less serious, non-brutality FBI reports received by the Program.

Item #4--This figure reflects all FBI investigations reviewed and closed in a given fiscal year including incidents prosecuted and closed upon conclusion of litigation. This number may exceed FBI investigations received because it includes investigations received during prior fiscal years which remained active for various reasons, e.g., awaiting results of local/state prosecution to ensure federal interests vindicated, awaiting results of additional investigative developments, awaiting federal prosecution and appeals process.

Item #5--This figure reflects the number of grand jury investigations initiated during a given fiscal year.

Item #6(d)--'Other' are cases involving offenders not related to racial/religious violence which grew out of racial/religious violence cases; involuntary servitude cases are also included on this line. FY95 figures also include one cruelty to seamen case.

Item #6(e)--'Church Arson/Desecration' are cases involving fires or damage to churches. These types of cases were categorized as racial/religious violence (hate crimes) in the past. The creation of the National Church Arson Task Force (NACTF) and the expansion of the statute used to enforce damage to religious property necessitated the need to list this type of case separately.

Item #7--This figure indicates the number of training and outreach programs in which lawyers from the Criminal Section participated, e.g., training law enforcement agencies in an effort to prevent abuse, FBI and INS programs targeting federal, state and local law enforcement supervisors for training on civil rights issues, conferences designed to communicate hate violence activities to public interest organizations. This performance indicator was not tracked until FY 96.

Item #7a and #7b--These figures indicate the number of Criminal Section attorney hours spent conducting presentations at training and outreach programs. This performance indicator was not tracked until the third and fourth quarters of FY96 (May, 1996).

Item #8-- This figure reflects the number of investigations pending review and disposition at the end of a given fiscal year. This number includes cases charged but pending litigation.

Item #9-- This figure refers to matters awaiting presentation to a federal grand jury or outcome of an on-going grand jury investigation.

Item #10-- 'Success Rate' = (Convictions + Pleas)/(Convictions + Pleas + Acquittals + Dismissals). Numbers reflect all activity occurring or projected within a given fiscal year. For example, some of the actual convictions, pleas and acquittals occurring in a given fiscal year, which are used to calculate 'Success Rate', resulted from cases filed in prior fiscal years.

Items #11, #12 & #13-- 'Productivity/Efficiency' Indicators were based on the number of line attorneys authorized for that fiscal year (or 'n'). For example, the actual number of 'Matters Investigated and Closed per Attorney' for FY 94 (107) was derived by dividing the number of 'Matters Closed' (2686) by the number of line attorneys (22).

B. Factors Affecting FY 96 Program Performance.

Items #1 and #3-- While the number of FBI investigations received during FY 96 was approximately 10% higher than the number of investigations received last fiscal year, there was also an influx in the number of citizen complaints received during FY 96 resulting in a 40% increase in the number of total complaints received.

Item #2-- The total number of complaints reviewed during FY 96 is substantially higher due to the influx in citizen correspondence received and ultimately reviewed by the paralegal staff.

Items #4, #6 and #8-- The decrease in the number of matters closed and the number of cases filed during FY 96 as well as the increase in the number of pending matters is due in part to increased attorney resources spent on complex investigations and prosecutions, such as a death penalty trial which consumed full-time resources of two attorneys over a three month period. Litigation of a multiple-defendant prison case which also consumed the resources of two attorneys on a full-time basis for approximately four months, an involuntary servitude case which ultimately resulted in the guilty pleas of eight Thai nationals and consumed the full-time resources of one attorney over a four month period, an investigation into a prison riot including hundreds of witnesses which has consumed the resources of two attorneys over a six month period, an on-going, extensive grand jury investigation relating to the use of excessive force by police officers which has consumed full-time resources of one attorney and part-time resources of another as well as an on-going grand jury investigation relating to the use of excessive force in the apprehension of two undocumented aliens by deputy sheriffs which has consumed substantial resources of one attorney. In addition, the current level of lawyers with little criminal experience has limited our ability to assign these attorneys to work independently on grand jury investigations.

Item #7-- No comparison figures are available since this performance indicator was not tracked until FY 96.

Item #7a and #7b--No comparison figures are available since this performance indicator was not tracked until the third and fourth quarters of FY96. Therefore, item 7a includes actual attorney hours spent from May through September, 1996. The Target for FY97 is based on performance during last six months of FY96, and the target for FY98 is based on FY97 indicators with requested enhancements.

Item #10--The FY 96 success rates are based on the actual outcome of cases during fiscal year '96.

C. Factors Affecting Selection of FY 97 and 98 Targets.

Items #1 and #3--Since we have no control over the number of 'Complaints Received' and 'Matters Investigated', FY 97 and FY 98 Targets are the same as FY 96 actuals.

Item #2, #4 and #5--FY 97 Targets are based on the historical average of complaints reviewed from FY 94, FY 95 and FY 96. 'Increase in total number of complaints reviewed is due to large volume of citizen complaints reviewed. Number of matters closed has decreased slightly due to multiple attorney resources on several complex cases.

Item #6(a)-(d)--FY 97 targets based on actual FY 96 performance. Total cases filed during FY 95 reflects the largest number of cases filed during one year and it is difficult to predict exactly how many cases will be filed each year.

Item #7--FY 97 Target based on actual performance for FY 96.

Items #8 and #9--Targets for FY 97 are the same as FY 96 actuals. With three additional attorneys in FY 98, the program assumes an increase among some performance indicators including Pending Grand Juries' and a decrease in 'Pending Matters'.

Item #10--Because 'Success Rate' is difficult to predict, FY 97 and FY 98 Targets are the same as FY 96 Actuals.

* Except where noted above, all FY 98 targets are based on FY 97 indicators with requested enhancements

PRODUCTIVITY/ EFFICIENCY TO BE DEVELOPED

A. Definitions of Terms or Explanations for Indicators:

N.B. Data in this chart regarding institutional facilities includes data from seven pre-CRIPA cases still monitored by the Section. Data for target categories are rough estimates. Dashes are used in the table to indicate that the data is not available or was not a Section enforcement responsibility for the period in question.

#1. A good number of the 150 ADA matters in FY 1995 and 1996 were referred from Disability Rights Section and included some materials dated prior to that fiscal year. At the end of FY 1996, authority to handle Title II of ADA was reassigned to the Disability Rights Section. Of the 1065 incoming FACE complaints, approximately 1035 were identical and a result of an unusual letter writing campaign orchestrated by a non-profit group. These letters were answered by a standard response. The number of incoming matters under ADA is lower than expected due to the re-assignment of responsibility for this statute before the end of FY 1996.

#2. In view of the workload demands of already open investigations and cases in litigation, it is expected that fewer new CRIPA investigations will be able to be opened in FY 97-98. Fewer than expected FACE investigations were initiated due to the chilling effect the statute has had on violative activity nationwide. Fewer than expected ADA investigations were initiated in FY 1996 due to the reassignment of enforcement authority for Title II.

#3. CRIPA enforcement allows a period of informal voluntary compliance by subject institutions. This period includes time for the promised improvement to be established, re-evaluation tours by consultants, review of the institution's remedial plans, evaluation of institution progress in eliminating identified constitutional deficiencies. Additional findings letters may be issued when unsatisfactory progress is made. Formal consent decree negotiations may commence which often take one year or longer to conclude. Each investigation is considered individually and specific responses are made to institutions as required by the facts presented. There were fewer new CRIPA cases initiated in FY 1996 due to staff resources being allocated to completion of CRIPA investigations and PLRA enforcement. Fewer FACE cases filed in FY 1996 reflected the chilling effect that the statute has had on violative activity nationwide. Note that one of the two police misconduct cases filed in FY 96 was U.S. v. Kentucky which also alleged CRIPA violations and is also counted as a CRIPA case.

#7. There were fewer than expected CRIPA cases by the end of the year due to staff resources being allocated to CRIPA investigation completions and PLRA enforcement activities.

#9. Compliance reviews analyze, *inter alia*, incidents of harm, medical and psychiatric care, use of restraint, staffing ratios, adequacy of professional staffing, staff training, and community placement.

- #11. Speeches and conferences are utilized as outreach to explain to interested groups and parties about Department policies and to solicit views. Fewer than expected conferences were attended in FY 1996 due to financial considerations.
- #12. Referrals are usually made in connection with FACE and police misconduct matters.
- #14. Initial findings letters are sent at the end of the investigation period of CRIPA enforcement, as statutorily required. Delays in completing investigations are caused by the time required to schedule consultants for tours, conduct on site evaluations, review voluminous institutional documents, interview staff and other interested parties, etc. Often the unwillingness of state and local officials to cooperate results in numerous negotiation sessions to resolve questions on the appropriateness of the method of investigation. In FY 1996, the Section exceeded by seven the expected number of findings letters sent. Substantial investigative activity throughout the year produced findings concerning 22 different facilities.
- #15. Contempt motions are filed when defendants fail to comply with ordered relief. Typically, they occur after a protracted period of non-compliance.
- #17. Cases are not closed until minimum constitutional standards of care have been achieved. Protracted negotiation over the terms of settlements and the degree to which facilities achieve compliance with those terms often takes many years, depending on the efforts made by the defendants. When compliance is achieved, consent decrees are terminated, or orders of dismissal are sought.
- B. Factors Affecting FY 96 Program Performance.**
- #1c. Police misconduct complaints are increasing. Factors leading to the increase include wide-spread media publicity surrounding incidents of alleged police misconduct, including videotape depictions of incidents shown nation-wide on newscasts and other special news programs.
- #4. The number facilities being monitored pursuant to consent decrees increased. For example, the State of Kentucky voluntarily agreed to apply a juvenile facility consent decree to all of its juvenile detention facilities and reformatories state-wide.
- #8. The Prison Litigation Reform Act of 1996 significantly increased the Section's workload under CRIPA.
- C. Factors Affecting Selection of FY 97 and 98 Targets.**
- Widespread publicity regarding alleged incidents of police misconduct is expected to continue and to produce increased numbers of complaints, investigations, and civil actions. Until remedies are afforded on a systemic basis throughout the country consistent with the Americans with Disabilities Act, a continued high volume of complaints can be expected. Abortion protests are still characterized by some incidents of unlawful activity, e.g., individuals seeking to bar access to clinics, threats to physicians and other clinic staff, which must be addressed pursuant to FACE. The newly enacted Prison Litigation Reform Act has significantly increased the Section's CRIPA work in prisons, jails, and juvenile correction facilities and will continue to do so until at least through FY 1998.

A. Definitions of Terms or Explanations for Indicators:

1. Entities that make Section 5 preclearance submissions are those that have made submissions since 1980 and include states and counties covered under Section 4 of the Voting Rights Act (VRA), counties subject to preclearance as a result of Section 3(c), and cities, school districts, and other such entities within them, all of which are counted individually in this measure, since each submits changes independently of the others.
2. Counties subject to minority language requirements are counties and other political subdivisions subject to Section 4(f)(4) or Section 203(c) of the VRA.
3. Counties eligible for federal observer election coverage are counties and other political subdivisions certified under Section 6 of the VRA or under Section 3(a) court order.
4. Matters received includes situations believed to be problems brought to our attention by letters, telephone calls, faxes, personal contacts, and our own research and inquiries with respect to our activities.
- 5a. Section 2 of the VRA prohibits practices that have a discriminatory result; we use it especially to challenge methods of election and redistricting plans that deny minorities a fair opportunity to elect candidates of their choice.
- 5b. Section 5 of the VRA requires the federal review of voting changes made by specially covered states and counties, cities, school districts, and other political entities to assure that they are not discriminatory. We bring Section 5 enforcement actions to enjoin the enforcement of changes to which an objection has been interposed by the Attorney General or which have not been received for the required review.

- 5c A jurisdiction can seek a Section 5 declaratory judgment that an objected-to voting change is not discriminatory. These cases usually are complex, and their defense is a nondiscretionary responsibility of the program.
- 5d Sections 4(f)(4) and 203 of the VRA require certain jurisdictions to use specified minority languages in their electoral processes.
- 5e The National Voter Registration Act (NVRA, or "motor voter" law), which went into effect on 1/1/95, requires the states to conduct voter registration by mail, to permit voters to register when they obtain drivers' licenses, and to conduct voter registration at specified government agencies, and prohibits voter purges except under very controlled conditions.
- 5f The Program seeks to defend redistricting plans unfairly characterized as racial gerrymanders under *Shaw v. Reno*, *Johnson v. Miller*, and *Bush v. Vera* that provide minorities fair opportunities to elect candidates of their choice.
- 5g The Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA) provides a remedy for the late mailing of absentee ballots for federal elections to members of the Armed Forces and other citizens who are abroad.
- 6 An active case is a case with activity or significant compliance monitoring at some point during the year.
- 8 Trials include evident jury and summary judgment and other dispositive hearings and major substantive status conferences.
- 9 Each Section 5 submission contains one or more voting changes.
- 10 Under Section 8 of the VRA federal observers selected by the Office of Personnel Management monitor elections where the Program has determined that observers are necessary to document and deter discrimination. In determining the number of elections monitored by federal observers, we count each time an election conducted by a county, city, or school district is monitored by federal observers.
- 11 Included under Intermediate Outcome are important but nondispositive court decisions, for example, with respect to motions for preliminary relief and summary judgment.
- 12 More information from submitting authorities with respect to Section 5 submissions is requested when necessary to enable us to determine whether or not the submitted changes are discriminatory. Section 5 objections are frequently preceded by "more information" requests.
- 13 Cases are classified complex by supervising attorneys based on the legal and factual issues involved. Cases are classified as successfully litigated by supervising attorneys when a consent decree is filed with the complaint, when a court grants the relief that we have sought, or when we otherwise accomplish the objectives of the litigation. Cases may be included even if appeals or compliance monitoring are not completed. Multiple cases may be included more than once (either in the same year or in different years) where multiple inclusion is required to accurately reflect the work and accomplishments of the Section.
- 14a,b Section 5 objections almost always lead to compliance by the submitting jurisdiction. If the jurisdiction refuses to comply, an enforcement lawsuit can be brought, in which it is not necessary to prove that the voting practice in question is discriminatory. Jurisdictions that respond to an objection by requesting reconsideration or filing a declaratory judgment action normally comply with the objection until it is withdrawn or the declaratory judgment is granted.

- 14c.d By preclearing a proposed voting change submitted under Section 5, the Attorney General makes the change legally enforceable under federal law. The numbers presented are based on #5 and 51a & b.
- 15 Polling places with discrimination prevented or remedied refers to polling places at which federal observers (see #10) were present. The presence of observers deters discrimination, enables us to remedy the discrimination while the election is in progress, or provides a basis for resolving prior to the next election those problems not amenable to immediate resolution (for example, inadequate minority language procedures).
- 16 Section attorneys, in addition to their litigation responsibilities, handle complex Section 5 submissions, handle numerous matters and inquiries that do not develop into lawsuits, investigate counties for the possible need for federal observer coverage under Section 8 of the VRA, and attend elections monitored by federal observers. Completed cases and matters per nonsupervisory attorney is based on the number of cases reported in #13 and completed matters as well as Section 5 submissions, election investigations, and election coverage.
- 17 Attorney-reviewers are section attorneys assigned to supervise Section 5 analysts in the review of voting changes and to prepare legal analyses of submissions.
- 18 Section 5 analysts also assist in litigation support and in election coverage preparation.
- B. Factors Affecting FY 96 Program Performance.**
- 5a Fewer Section 2 actions were filed than anticipated primarily because the Section was fully occupied by other litigation, especially Shaw/Miller and WRA litigation. See #5e,f and 6e,f.
- 5c All four of the new Section 5 declaratory judgment actions related to pending litigation brought by us or by others in the jurisdictions bringing the Section 5 actions, and two were resolved without discovery or trials. We are prepared for the continuation of this trend.
- 5d While no minority language lawsuits were filed during FY 96, the Letter of Agreement obtained from San Juan County, New Mexico, is the functional equivalent of a lawsuit in results achieved.
- 7 This is a new measure, and the number of elections that would be investigated was underestimated.
- 8 FY 96 was an extremely busy year for litigation, with many more court appearances than anticipated.
- 10b While the number of elections monitored by federal observers (#10a) was what was expected, smaller numbers of federal observers have been sufficient for many of the elections.
- 11 We projected a higher number of nondispositive rulings based on the number in 1995. However, 1995 was the first year that this indicator was measured, and it turns out that several of our cases had unusually large numbers of such rulings in 1995.
- 13a,b,c A higher proportion of our cases than expected turned out to be complex; these were primarily Shaw/Miller cases. Because the Supreme Court has rejected our position in these cases, our rate of success was lower than anticipated.
- 14a,b Because of changes in legal standards, reductions in submissions that most frequently lead to objections, and random fluctuations, the number of Section 5 objections was lower than anticipated. See C.14a,b.

- 15 See #10b.
- 16 An unexpectedly large number of short-term projects (see election coverage investigations, #7) increased the nominal productivity/efficiency measure for nonsupervisory attorneys.
- C. Factors Affecting Selection of PT 97 and 98 Targets.**
- 4 Increased staffing resulting from exceptions to the hiring freeze will enable the Program to discover and investigate a substantially increased number of matters in 1997 and 1998.
5. We expect a steady increase in new lawsuits in 1997 and 1998 because of the conclusion of a number of very demanding lawsuits in 1995 and 1996, the backfilling positions and management efficiencies.
- 5c.f We cannot actually set targets but can only project based on past experience the number of Section 5 declaratory judgment actions we will need to defend and the number of Shaw redistricting challenges in which we will participate. With respect to these, we react to the actions (or inactions) of others.
- 10 We cannot actually set targets but can only project based on past experience the amount of federal observer election coverage; we react to the actions (or inactions) of others. While the number of federal observer election coverage will vary depending on the amount of election-related activity, long term trends indicate whether discrimination in voting is increasing (if the numbers go up) or declining (if the numbers go down). The resources that we must devote to election coverage is only partially reflected by election coverage statistics, as we are required to investigate and sort out problems for which relief under the MRA is required from those that are political in nature or for which a remedy under state law is appropriate.
- 14a.b We cannot actually set targets but can only project based on past experience the number of Section 5 objections that will be interposed; we react to the actions (or inactions) of others. While the number of Section 5 objections will vary depending on the amount of election-related activity, long term trends indicate whether discrimination in voting is increasing (if the numbers go up) or declining (if the numbers go down). During the early part of this decade a large proportion of the Section 5 objections were to redistricting plans; we will anticipate a large number of redistricting plans in the next decade. Annexations also account for a large proportion of Section 5 objections in some years. The volume of annexations submitted for review varies greatly from year to year, and as a result predictions with respect to the number of annexation objections cannot be made with confidence. Decisions of the U.S. District Court for the District of Columbia and of the Supreme Court have effected a change in the legal standards for Section 5 preclearance that have resulted in the rejection of fewer Section 5 objections, and we expect the number of Section 5 objections to remain relatively low in 1997 and 1998.
17. 18 While objections are interposed to only a small percentage of voting changes that are submitted for review, and while some submissions require closer scrutiny than others, the Program's attorney-reviewers and Section 5 analysts must always be alert to changes that are superficially routine but when studied more carefully are problematic. We thus consider Section 5 submissions per attorney-reviewer and Section 5 changes per Section 5 analyst rates as high as those of 1994 and 1996 and these projected for 1997 and 1998 to be undervalable.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

NAME OF DECISION UNIT: EMPLOYMENT LITIGATION		PERFORMANCE TARGETS AND ACTUAL RESULTS							
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target

	37. Percentage of authorized suits settled without trial				80	85%	85%				
Predictability/Effectiveness											

A. Definitions of Terms or Explanations for Indicators:

#1 Pursuant to section 706 of Title VII of the Civil Rights Act of 1964, as amended, the Equal Employment Opportunity Commission (EEOC) refers to the Department of Justice charges of discrimination against state and local governments that it believes are worthy of litigation.

#2 Title VII requires that charging parties receive notices of right-to-sue before commencing private litigation. The Employment Litigation Section is responsible for issuing such letters when the charge involves a state or local government employer.

#3 Pattern or practice investigations refer to the Attorney General's self-starting authority set forth in section 707 of Title VII. Included are both preliminary investigations and investigations formally authorized by the Assistant Attorney General.

#1 and #4 Not all EEOC referrals are investigated. Therefore, the numbers of EEOC referrals received and investigated will not be identical.

#30 Represents decrees agreed to by parties during the fiscal year.

#10 Stage I refers to the liability stage of litigation

#11 Stage II refers to the stage of litigation whereby victims of discrimination are identified and the make-whole relief to which they are entitled is determined.

#32 Represents monetary relief contained in decrees agreed to during fiscal year.

#34 Represents estimated number of victims who will receive monetary relief under decrees agreed to during the fiscal year.

#35 Represents estimated number of victims who will receive job relief under decrees agreed to during fiscal year.

B. Factors Affecting FY 96 Program Performance.

#1 In FY 1996 the program received more referrals of individual charges of discrimination from the EEOC over FY 1994. The Program has no control over the number of such referrals that are received from the EEOC.

#2 FY 1996 witnessed an increase in the number of request for notices of right-to-sue over what was anticipated. As noted in the text, the Program has a statutory responsibility to respond to such requests.

#3, 4, 13, 14 The number of affirmative 706 and 707 investigations and suits commenced is directly correlated to the number of defensive cases, and their complexity, that are filed and must be defended. At the present time, the Section is devoting 25% of its resources to defensive litigation. The Section has requested an increase of two attorneys for FY98. The additional staff will offset the loss of some of the staff that are working on the Adairand litigation, and allow us to increase the number of affirmative matters for which we are responsible.

85 The Program has no control over the number of defensive cases that are filed and which it has a statutory obligation to defend.

820 Because of the increased number of requests, the Program issued more than 731 more notices of right-to-sue than it had anticipated. Due to limited resources, the Program's backlog of requests for notices of right-to-sue increased. The Program is exploring various options to address this matter.

C. Factors Affecting Selection of FY 96 and 97 Targets.

The Program's ability to investigate and litigate violations of Title VII will be affected by the number and complexity of the defensive cases that are filed in the text of the Adjudicatory decisions. In addition, the Program's ability to litigate affirmative action programs, defending them and other defensive cases requires the program to divert its resources from Title VII enforcement. Therefore, the number of Title VII investigations commenced and completed, as well as the number of Title VII suits initiated will be inversely correlated to the amount of defensive litigation that is extant.

A. Definitions of Terms or Explanations for Indicators:

-- Actual figures for 1994 are listed as not applicable ("N/A.") because they exclusively or overwhelmingly addressed Section 504/ADA functions that were transferred to the Disability Rights Section. Performance indicators for 1995-1998 address the non-disability mission of the Coordination and Review Section, which was reorganized in mid-1995.

-- "E.O. 12250" (applicable to activities described in items 2-15 and 17-19) is the Executive Order directing the Attorney General to provide for the consistent and effective enforcement by the various federal funding agencies of the grant-related civil rights statutes that cover federally assisted programs. The Section carries out a coordination and review, technical assistance, and policy development program to implement the Executive Order. The statutes covered by E.O. 12250 are "Title VI" (Title VI of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color, and national origin in federally assisted programs); "Title IX" (Title IX of the Education Amendments of 1972, which prohibits discrimination on the basis of sex in federally assisted education programs; and the provisions of various program statutes that prohibit discrimination on the basis of race, color, national origin, sex, or religion in federally assisted programs.

-- "Agency" (items 3-5, 7-8, 10-11, 13 and 17) refers to the 27 Federal agencies administering federally assisted programs whose civil rights enforcement is coordinated by the Section under E.O. 12250.

-- "Clearinghouse" (item 10, applicable also to item 15) refers to the Section's coordination, assessment, and referral function with respect to complaints it receives (in its role as a central federal government reception point) to the appropriate federal agency that may have jurisdiction to investigate the allegations.

-- "DOJ complaints" (items 1, 12, 16, 20-21) refers to the Section's administrative complaint investigation activities with respect to allegations of discrimination in violation of Title VI, Title IX, and related statutes involving DOJ's federally assisted programs. DOJ, in addition to its governmentwide coordination role under E.O. 12250, also is one of the 27 federal funding agencies. Therefore, it is responsible for enforcing Title VI and related statutes in its own federally assisted programs.

B. Factors Affecting FY 96 Program Performance:

-- The actual numbers of Title VI complaints against DOJ recipients received in 1996 (item 1), open DOJ complaints per investigator (item 20), and complaint closures (items 12,16,21) are less than the 1996 target figures because in several carry-over and new cases that involved multiple complainants and allegations against the same recipients, the cases were consolidated.

-- Increases in the Section's 1996 governmentwide coordination, outreach, technical assistance, and policy review activities over 1995 figures (items 2-5, 7-11) reflect the results of outreach to agencies and to the public begun in 1995. These efforts reflect the Section's role in the Division's objective of revitalizing the enforcement of Title VI and related statutes.

-- 1996 actual figures for individuals informed of their rights and responsibilities under Title VI (items 19,20) exceed targets but still understate outreach activities for 1996. We cannot estimate the numbers of minority persons who heard the Title VI radio public service announcement that was distributed for airing to 600 minority-market stations.

C. Factors Affecting Selection of FY 97 and 98 Targets.

-- 1997 and 1998 increases in DOJ complaint investigation-related activities (items 1, 12, 16, 19, 20-21) are anticipated as the result of extensive outreach and public information efforts to make individuals aware of their rights under Title VI, and as the results of DOJ's police misconduct initiatives are realized.

-- Increases in E.O. 12150 interagency coordination and agency-related activities in 1997 and 1998 (particularly items 4, 5, 9, 11, and 18) reflect the results of the Section's post-organization outreach initiatives to Federal agencies.

-- 1997 and 1998 "clearinghouse" activity increases (line items 2, 10) are attributable to the Section's public information and outreach efforts to beneficiaries of federally assisted programs and to overall efforts to revitalize the enforcement of Title VI and related statutes.

	b. Pattern or Practice/Zoning Cases:						
	Total Amount/Amount of Civil Penalty (no targets)		\$22,346 million		\$13,760 million		

A. Definitions of Terms or Explanations for Indicators:

Item #1. In the workload category, the number of election and prompt judicial action referrals has been slightly reduced in 1996. This is due to the fact that the number of cases filed in the category of election and prompt judicial action referrals are required to be filed by statute, there are occasions when we actually do not file (e.g., when the case settles before filing in court or when newly discovered evidence indicates the referral should be returned to HUD for reconsideration.)

Item #4(a)(3) refers to "other pattern or practice" cases. This number includes the important pattern or practice cases we file that do fall into one of the priority categories listed before them, i.e., testing, fair lending, insurance or zoning. It is important to note that this category does NOT include in its count several additional cases which are filed as election cases alleging individual acts of discrimination, which are subsequently expanded to include pattern or practice allegations through the filing of an amended complaint after discovery of evidence indicating a broad pattern or policy of discrimination by the defendant. In other words, there are other pattern or practice cases being initiated through amending the election cases which are not captured by this category.

Item #7 has been modified to "Other Hearings" as opposed to "Prompt Judicial Action Hearings." The broader "Other Hearings" which includes prompt judicial action hearings as well as other court hearings and on such matters as summary judgment and discovery motions, is a more accurate indicator of our Output/Activity.

Item #8. Investigations are defined as matters opened and requiring investigative activity by an attorney and/or paralegal.

B. Factors Affecting FY 96 Program Performance.

Item #3. The actual non-discretionary case filings for 1996 were considerably lower than targeted. This is due to the greatly reduced number of HUD referrals of election and prompt judicial action cases. This trend was first noted in 1995 and it accelerated in 1996. This has a direct impact on the number of non-discretionary case filings. We believe this is primarily due to the increased number of complaints that are referred to state agencies. We are currently in the process of reviewing the impact of this trend on our program. We expect to consult with HUD to determine the causes of the decline in such cases in the last two years and their expectations for the future.

Item #8. When targeting the number of investigations, we were not using the present definition of investigation. Because of the broader definition of investigations the number of actual investigations was far greater than targeted.

Item #10. The amount of monetary relief in 1995 was a record high; this figure was affected in part by one settlement of \$16.5 million in the property insurance area. Because one settlement of this magnitude is not always predictable, it is difficult to accurately predict this figure in advance.

C. Factors Affecting Selection of FY 97 and 98 Targets.

These targets have been adjusted to reflect our experience in 1996, especially in the reductions of HUD referred cases. This has led to a reduction in the number of cases referred to state agencies. We have slightly increased the expected number of discretionary case filings of case resolutions for such cases. We have slightly increased the expected number of discretionary case filings for 1997 and 1998 because we expect a higher number of cases to be generated by our testing program.

	b. Students Involved		300,000	600,000	255,000	700,000	800,000

A. Definitions of Terms or Explanations for Indicators:

#4 Matter refers to any correspondence given a "good" DJ number, however, the school district involved is not operating under a desegregation order to which the United States is a party. Also, the issue(s) involved has the potential to generate a new case.

#9 OCR refers to the Office for Civil Rights of the U.S. Department of Education who has primary responsibility for enforcing Title VI of the Civil Rights Act of 1964, which prohibits public school districts that receive federal funds from discriminating on the basis of race or national origin in a program or activity.

#10 Includes those school districts that are being actively monitored

#17 The bulk of our workload -- in addition to the higher education cases -- involves enforcement activities seeking compliance with extant desegregation orders and/or supplemental relief under those plans. Case activity necessary to obtain compliance with the existing court order and/or supplemental relief is prosecuted in the same manner as "new" litigation, and, thus, for FY 96 and FY 97 will be counted as such.

#23 A "favorable decision" is a decision by the court which affirms the position advocated by the United States.

#28 Most of these matters were administratively closed in prior years; however, they were not officially closed until FY 95. We normally do not close this many matters in a given period.

#29 There were no new cases filed FY 96. However, the number of cases increased because we discovered through our review project that two cases involving six school districts were erroneously given a dismissed status. The cases should have been given a D Gen status indicating that the court found the districts unitary, dissolved the detailed desegregation order, and entered a permanent injunction which includes general prohibitions against discrimination in various areas of school operation. The cases were then placed on the inactive docket of the court subject to being reactivated upon proper application by any party or on the court's motion. Thus, #1 for FY 95 should have reflected a total of 220 cases at the beginning of the year and #29 should have indicated a total of 218 cases pending at the end of the fiscal year. This has been corrected for FY 96.

#30 A school district is "administratively closed" when the review of the report to the court over a five year period has reflected no significant problems in the district.

B. Factors Affecting FY 96 Program Performance:

The Section continues to maintain a large non-discretionary workload and to date has been unable to exercise significant discretion in how to use its resources. In addition to actively monitoring and responding to complaints which require its immediate attention in several hundred elementary and secondary school districts, the Section is devoting substantial staff time to several high profile, complex, statewide higher education cases in Alabama, Mississippi, Louisiana and Tennessee. In the area of gender discrimination, the Section is handling two high profile suits involving discriminatory admissions in Virginia (Virginia Military Institute) and South Carolina (The Citadel). For FY 96, cases involving higher education continued to require substantial resources until appropriate remedial measures are finally approved by the courts and successfully implemented. In fact, during the first quarter of the fiscal year, litigation preparation activities concerning The Citadel consumed one-half of the Section staff time as well as more than 50 percent of the travel budget.

For FY 96, the Section also directed its limited resources to systematically reviewing the 500 plus court ordered school districts on its active case docket. The purpose of this case review project is to seek compliance of those school districts that are in violation of their extant desegregation orders and to administratively close those districts that are in compliance, thus, removing them from our active case docket. This project involves reviewing hundreds, and in some cases, thousands of documents, contacting various community groups and visiting many of the districts. It is anticipated that such activity will increase the number of complaints from citizens and community groups, as well as prompt a number of districts to seek partial or full termination of their court orders. The latter action will require more comprehensive investigations and may require an examination of data in six or more relevant compliance areas covering a period of many years.

C. Factors Affecting Selection of FY 96 and 97 Targets.

In 1997 and 1998, the Section expects to continue its enforcement effort (i.e., the case review project), as well as give priority attention to focusing on violations that deny (i) educational quality to minority students; and, (ii) equal educational opportunities to women, language minorities, and students with disabilities. This endeavor will involve the examination of differences in curriculum offerings among individual schools within school districts, review of student placement procedures, including tracking and ability grouping, and examination of student achievement data such as test scores for the hundreds, and in some cases, thousands of students in the affected school districts. Additionally, on June 26, 1996, the Supreme Court issued its decision in *United States v. Commonwealth of Virginia (Y80)*, finding that the Commonwealth of Virginia's exclusion of women from the Virginia Military Institute violated the Equal Protection Clause, and that the remedy of providing women a separate program at Mary Baldwin does not cure the violation. In light of this decision, the Section is anticipating a significant increase in activities for the two high profile cases involving discriminatory admissions in Virginia (Virginia Military Institute) and South Carolina (The Citadel), which will require a substantial amount of the Section's resources.

* Designates indicator covering a requested 1998 program change. A performance indicator and target must be set for the results that will be achieved should resources be received.

A. Definitions of Terms or Explanations for Indicators:

The Section (formerly the Public Access Section) began enforcing the Americans with Disabilities Act (ADA) in 1992 (its effective date was January 26, 1992). The Section also initiated its statutorily mandated technical assistance and certification activities at that time. Until March 1, 1995, the Section handled and resolved (informally or through litigation) investigations only under Title III (private entities, nongovernmental issues) and Title II (State and local government) litigation. On that date the Section became responsible for investigating Title II complaints and litigating Title II (employment) charges against State and local governments. In addition, on March 1, 1995, the Section became responsible for issuing regulations to implement Titles II and III of the ADA, representing the Department as a member of the U.S. Architectural and Transportation Barriers Compliance Board, coordinating the implementation of Title II by the seven designated agencies and coordinating the government-wide implementation of Section 504 of the Rehabilitation Act of 1973 pursuant to E.O. 12,250 to coordinate the implementation of Section 504 of the Rehabilitation Act of 1973.

The input, workload, and end outcome figures for the 1995 actual and later years reflect the March 1, 1995, reorganization.

Lines 1 & 2: Litigation includes those court actions in which the Section participants as plaintiff, plaintiff-intervenor, or amicus, including cases in which the U.S. defends the constitutionality of the ADA. It does not include cases in which the Section's participation is limited to an appeal recommendation. The increase in 1995 Actual Cases from the previously reported 8 to 12 represents a more accurate actual count prepared for the newly designed table.

Line 3: "Investigations Pending" includes all Title I, II, and III matters not filed in court or referred to other department/agencies/offices.

Lines 5 & 6: "Other Matters" lines include all incoming material that becomes "output" listed in Lines 14a-e. These materials are primarily letters and should be processed within a few days or weeks. The Correspondence Tracking System implemented in 1996 allowed us to produce more accurate correspondence numbers. All "Other Matters" lines reflect this. We did not anticipate a large carryover from one year to the next. However, the sheer volume of material and the complex issues raised by these writers will in reality produce a small backlog. Thus at line 5, "Other Matters Pending," the 1997, and 1998 figures represent the non-processed items.

Line 7:	"Certification Matters Pending" includes requests for formal certification that an adopted code is equivalent to the ADA requirements and requests for informal review of codes that have not been formally adopted, including model codes and proposed codes for which the Department provides technical assistance. This category includes requests pending at the start of the fiscal year and those received during the year. The review process is largely the same for "formal" certification requests and for "informal" requests for technical assistance.
Line 8:	"Interagency Coordination Matters and Regulations Pending" projects requests for legal advice, review of regulations, or review of other policy documents from other Federal offices. It also reflects workload demand resulting from the Section's role as the Department representative on the U.S. Architectural and Transportation Barriers Compliance Board. These responsibilities were assigned to the Section on March 1, 1995.
Line 9:	"Technical Assistance (TA) Requests" includes calls to the ADA Information Line, written requests for technical assistance and documents, bulk orders for TA documents, requests for ADA speakers, inquiries from Congressional staff, and requests for pre-publication review of ADA documents developed by grantees and other agencies to ensure legal and technical accuracy.
Line 10:	"TA Grant Requests" includes applications received in response to the annual solicitation published in the Federal Register as well as unsolicited requests for assistance.
Line 11:	"Small Entity Guidance Requests" includes requests anticipated pursuant to section 213 of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104-121, 110 Stat. 847), which requires the Section to provide "informal small entity guidance" to answer inquiries concerning information on, and advice about, compliance with the Section's regulations, interpreting and applying the law to specific sets of facts supplied by the small entity. This requirement takes effect on June 27, 1996. The projections in this category are based on the Section's technical assistance experience to date. For FY 1996 and prior years, requests for technical assistance from small entities were not counted separately. The requests are included within the total numbers of technical assistance requests in line 9.
Lines 12 & 13:	"Concluded" lines include litigation and investigations ended for all reasons.
Line 14:	"Referrals for Mediation" reflects activity undertaken by the Section through technical assistance grants to private organizations. One grant began in 1994 and continues through 1995; a second grant was initiated in 1995 and is expected to continue through 1996. This category includes all those cases in which the Department offered the option of participation in mediation.
Line 14d:	"Congressional Responses" reflects the Section's efforts to assist Members of Congress to provide service to their constituents by responding to inquiries about the Section's activities.
Line 15:	"Certification Responses" includes interim responses to State or local officials with respect to adopted codes, and to private sector organizations with respect to model accessibility codes. [In previous budgets, this category reflected all certification reviews in progress during the year. To better reflect the rate of completion, it is now limited to those in which responses are sent to the requesting entity.]
Line 16:	"Interagency Coordination and Regulatory Responses" includes responses to requests for legal review of proposed regulations and other policy documents implementing the ADA or the Rehabilitation Act identified in line 5 plus regulations and documents generated by the Section. It also includes actions related to the Section's role as the Department representative on the U.S. Architectural and Transportation Barriers Compliance Board. Responsibilities in line 12 were assigned to the Section on March 1, 1995. Figures for 1995 are therefore based on a 7-month period.

Line 18a:	"ADA Information Line Calls Served by Automated System" includes all calls answered by the automated information line service, 24 hours a day, which allows callers to listen to recorded information, leave a request for materials that are then mailed to them by staff, or speak to an ADA specialist during business hours.
Line 18b:	"ADA Information Line Calls Served by Staff" includes the number of callers who speak to an ADA specialist.
Line 19:	"ADA Training/Speeches/Exhibits" is the number of training and speaking engagements conducted and the number of conferences where Section representatives staff an exhibit to answer questions about the ADA and provide TA documents to the conference participants.
Line 20:	"TA Documents/Materials Developed or Reviewed" includes DOJ-produced materials and pre-publication review of materials developed by grantees and other Federal agencies to ensure legal and technical accuracy.
Line 21:	"Cumulative Body of TA Documents Developed" includes all technical assistance documents and videotapes produced by the Section and by its grantees through the end of fiscal year. It does not include documents developed by other agencies.
Line 22:	"TA Information and Documents Disseminated" includes informational materials (6.3 million in 1996) and substantive technical assistance documents (1.24 million in 1996) disseminated by the Section and its grantees or downloaded from the Section's electronic bulletin board and the Internet.
Line 23:	"TA Grant Activity" includes the number of new grants and continuation grants awarded to trade associations and other organizations that target ADA information, education, and technical assistance to specific types of businesses, State and local governments, or other audiences; and the number of grants being monitored during the fiscal year.
Line 31:	"Number of Facilities or Programs Affected" includes a count of physical structures such as buildings, stores, offices, or programs, such as 9-1-1 services, correctional departments, or municipal courts affected by a favorable conclusion of litigation or investigations.
Line 32:	"Final Certification Decisions" includes formal certification determinations and final responses with respect to model codes, and final responses to requests for technical assistance review of proposed codes. Analyses of model codes were counted as "technical assistance" responses in prior years. The Section has determined that it is more appropriate to classify these determinations as final decisions. These "certification decisions" do not include interim responses to State and local governments that are reflected in line 15, above.
Line 33:	"Final Regulations Issued" includes regulations published by the Department, including those that result from the Section's role as the Department representative on the U.S. Architectural and Transportation Barriers Compliance Board. It does not include regulations issued by other agencies after Section review. These responsibilities were assigned to the Section on March 1, 1995.
Line 34:	"Number of People Receiving TA" includes people receiving answers to questions through phone calls or letters, people receiving substantive technical assistance documents, people attending ADA training and speaking engagements, and people receiving ADA technical assistance through the TA grants. These figures reflect substantive technical assistance activities but do not include the 5.9 - 6.3 million informational materials disseminated each year by the Section or similar materials disseminated by grantees to promote awareness of the ADA and available resources.

Line 35: "People Receiving TA Per TA Staff Person" reflects the number of people receiving technical assistance (line 23) divided by the number of TA professional and support staff.

B. Factors Affecting FY 94 Program Performance.

Line 7: "Certification Matters Pending." Targets for were anticipated that several states that are revising their accessibility codes to be consistent with the ADA would complete that process in 1995. Many of those code revisions are still in progress, therefore new requests were below the target number.

Line 9: "Technical Assistance (TA) Requests." Requests were higher than anticipated when a new publication for small businesses was announced in July, 1996.

Line 14c: "Referrals for Investigation." The Section anticipates a substantial increase in activity over the 1995 level because of the full implementation of the second grant program, which has a significantly broader scope than the initial grant.

Line 14d: "Congressional Responses." 1996 figures are increased from 1995 because the Section had responsibility for responding to Congressional inquiries for only seven months of 1995.

Line 15: "Certification Responses." This category has been revised to include only those pending matters regarding which an interim response was made to the submitting entity.

Line 1 b: "ADA Information Line Calls." The ADA Information Line was shut down in November, December and January for a total of five weeks due to furloughs and a winter blizzard. This resulted in a decreased number of calls handled by staff. In addition, due to budgetary uncertainties, the Section did not fill two vacancies on the ADA Information Line staff.

Line 20: "TA Documents/Materials Developed or Reviewed." 1996 includes review of an unusually large collection of ADA training modules prepared by another agency.

Line 32: "Final Certification Decisions." This category has been revised to reflect both the increasing complexity of the responses to requests for "informal" review, and the redescription of this category to limit its scope to final determinations only.

C. Factors Affecting Selection of FY 97 and 98 Targets.

Note: The Section's potential enforcement input tripled in March 1995, but the enforcement staff increased only by approximately 25%. In order to focus our enforcement efforts more effectively, we are filing cases with greater potential impact and not opening some less significant matters.

We will be referring more Title II matters to other agencies and DOJ components rather than investigating them ourselves beginning with 1996, but at the same time receiving more Title I referrals from EEOC due to recent changes in that agency's referral policies. Early in 1996, the Section hopes to clear up a significant number of Title II complaints that were pending at the time of the reorganization and to begin some new Title II investigations.

Lines 1 & 2: The 1997 and 1998 Target increases reflects a more experienced and efficient staff. The 1997 Target of 17 cases is two over the 15 previously reported. This reflects the new design of the table, in which Line 1 (Litigation Pending) plus Line 2 (Litigation Started) minus Line 12 (Litigation Concluded) equals Litigation Pending for the next year's target. Line 2 and Line 12 (Litigation) 1997 and 1998 targets do not reflect the ADA Enforcement program increase because the program increase is targeted toward investigations started and concluded without litigation. That is reflected in Line 4 (Investigations Started) and Line 13 (Investigations Concluded).

Line 8: "Interagency Coordination Matters and Regulations Pending." This function is largely reactive. It includes some matters resulting from the Section's obligation to publish regulations implementing titles II and III of the ADA. However, the majority of the items reflected are the result of the Section's obligation to provide legal advice and policy guidance to other agencies. The targets for 1997 and 1998 assume that new matters will be received and resolved at a rate comparable to that experienced in 1996.

Line 13: "Investigations Concluded." 1997 and 1998 targets reflect additional contract or program increase investigators and mediators

Line 14 c: "Referrals for Mediation." In 1996, referrals increased because training of all mediators was completed. To the extent that funding is maintained for a grant program in this area, the Section anticipates that referrals will continue at this increased rate through 1997 and 1998.

Line 14 d: "Congressional Responses." The number of Congressional inquiries is expected to decrease in 1997 and 1998 as individuals and entities become more familiar with the requirements of the law.

Line 16: "Interagency Coordination and Regulatory Response." This function is largely reactive. It implements the Section's obligation to provide legal advice as needed by other agencies. The targets for 1997 and 1998 assume that requests from other agencies will continue at a rate comparable to that experienced in 1996.

Line 17: "Small Entity Guidance Provided." This category estimates the number of responses that the Section will provide in 1997 and 1998, based on current resources. For FY96 and prior years, responses to requests for technical assistance from small entities were not counted separately. The responses are included within the total numbers of technical assistance responses in line 22.

Line 31: No performance indication are targeted for 1997 and 1998 because this number depends entirely on the nature of the opposing party, i.e., an individual's corporation or hotel chain. This number measures impact of particular cases and as such is unpredictable.

Line 32: "Final Certification Decisions." Output is projected to increase in 1997 and 1998 due to increased experience of Section staff and increased knowledge of the ADA requirements among covered entities.

Line 33: "Final Regulations Issued." Targets for 1997 and 1998 are based on the U.S. Architectural and Transportation Barriers Compliance Board plans to revise the ADA Accessibility Guidelines. Because the ADA implementing regulations are required to be consistent with the ADA Accessibility Guidelines, each revision triggers a corresponding change in the Department's regulations.

*Designates indicator covering a requested 1998 program change. A performance indicator and target must be set for the results that will be achieved should resources be received

51
53

Items 1, 3 & 4. A "Charge" is the written accusation that a person who thinks he/she has been discriminated against files with OSC.

1. "Actionable Charges" is a subset of the total number of charges received. An actionable or complete charge is one which, after preliminary review and/or consultation with the charging party, is found to be within OSC's jurisdiction and thus, requiring investigation.

2. As "Independent Investigation" is an investigation conducted on the Special Counsel's own initiative where there is reasonable cause to believe that a person or entity has engaged or is engaging in an immigration related unfair employment practice.

3. "Non-Actionable Charges" are those in which OSC determines that the charging party has stated a cause of action, but under a different statute. Those charges are referred by OSC to the appropriate enforcement agency.

7 & 8. "Worker" and "Employer Hotlines": OSC operates two nationwide toll-free telephone lines specifically designed to assist workers and employers with questions about immigration related unfair employment practices. The worker hotline can be quickly linked with AT&T's translator service to enable our professional staff to assist callers in their own language. The employer hotline, which was created in 1994, is fully automated (however, the caller can easily reach an OSC attorney) and includes a "fax back" feature which allows the caller to receive the latest information on INS Form I-9 requirements, etc.

9. "Grants": OSC conducts an annual grant program for nonprofit organizations throughout the country for the development and implementation of public education programs designed to address the unique needs of communities with high alien and minority language populations.

12. "Grants Awarded": Each year OSC publishes a notice of availability of funds in the *Federal Register* announcing our annual grant program. In response to this announcement OSC receives approximately 100 applications from not-for-profit agencies throughout the country. OSC must then go through an extensive grant review process involving much of OSC's professional and support staff in order to determine which agencies will be selected as grantees of the limited funds we have available for this program.

13c. "National Coordinator": OSC also conducts a national outreach campaign through a private contractor which has aired television and radio announcements nationwide, as well as produced and distributed materials in many languages. Outreach conducted by the national contractor is the number of times each paid advertisement has been aired. It should be noted that these advertisements are then often repeated several times free of charge as "public service announcements."

17. "Charges Resolved within 120 Days": By statute, OSC has 120 days to investigate each complete charge and make a determination as to whether there is reason to believe discrimination has occurred. Under certain circumstances the investigatory period may be extended for 90 days. However, a determination must be made by the end of the extended period. Therefore, OSC does not have a backlog of charges which are more than 210 days old.

21. "Telephone Interventions" refers to each time an OSC attorney or other professional prevents discrimination from occurring/continuing by providing information/counsel to an employee or employer via our "1-800" telephone lines without a charge having to be filed. The informal intervention can either prevent discrimination from occurring, to a specific individual or can stop an employer's ongoing illegal practice by providing the employer with information about proper employment eligibility verification practices.

B. Factors Affecting FY 96 Program Performance.

The number of charges that OSC has received in 1996 reflects a decrease from the previous fiscal year and the number of actual charges received turned out to be even lower than our targets. We believe this is due to three primary causes: 1) the success of our stringent enforcement efforts that have produced substantial civil

penalties; 2) our public outreach program to employers and employees informing them of INA's antidiscrimination provisions; and, 3) the continuing public opinion mood reflecting hostility towards immigrants. We believe this trend will continue into FY '97. The experience of the Office of Special Counsel has been that the passage of major anti-immigrant referendums in California, such as Proposition 187, result in a drop in the number of charges we receive due to heightened concern among legal immigrants as to their ability to assert their rights. Thus, based on our observation of the last campaign season and the passage of the anti-affirmative action referendum (Proposition 209) in California, the office predicts a continuing fall off in charges in the near future. In addition, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA) passed in September 1996 included an amendment which now requires charging parties who allege document abuse to prove that the employer intended to discriminate against them based on their national origin and citizenship status. OSC predicts that the imposition of this higher burden of proof upon charging parties who allege document abuse (our most frequent charge) will also deter immigrants from asserting their rights and filing charges with OSC.

C. Factors Affecting Selection of FY 97 and 98 Targets.

The data above is derived from OSC's case management system and extrapolations from the case management system. Factored into the targets are OSC's expectations regarding demographics, anti-immigrant sentiments, and the idiosyncrasies of our target population based on OSC's prior history and experience.

Note: OSC appeals are now conducted by the Appellate Program

D. Significant Accomplishments

OSC continues to seek to deter discrimination by increasing the number of pattern or practice cases it pursues, as well as by raising the level of sophistication with which we investigate and resolve such cases. Some of OSC's cases have affected entire industries and produced widespread reforms. For example, OSC recently negotiated the settlement of *United States v. Wal-Mart Stores, Inc.* The complaint filed by OSC alleged that a particular Wal-Mart location engaged in a pattern or practice of requiring non-citizens to produce unnecessary proof of their immigration status in order to be hired. The settlement agreement also covered an on-going OSC independent investigation of Wal-Mart's employment eligibility verification practices across the country. The terms of the agreement required Wal-Mart to pay a \$60,000 civil penalty, to implement an OSC-approved nationwide I-9 training program for its hiring personnel, and to allow OSC to monitor its employment eligibility verification practices at various Wal-Mart locations throughout the country.

Since September 1994, OSC has tried, before administrative law judges, three suits alleging a pattern or practice of document abuse by agricultural employers (*United States v. Strano Farms*; *United States v. Robison Farms*; and *United States v. Zabala Vineyards*). OSC received a favorable decision in *Strano Farms*, which included \$7,000 in back pay and \$101,750 in civil penalties (this decision was recently affirmed on appeal). The *Zabala* decision was rendered on December 13, 1995 and held that OSC must be able to identify specific "economic victims" in order to pursue pattern or practice claims. *Robison*, which was decided on April 19, 1996, reaffirmed OSC's view that a request for more of different documents includes an employer's request for specific documents from an authorized worker and said request is all that was required for a showing of document abuse under the statute prior to it being amended.

Section 535 of the Immigration Act of 1990 ("IAS90") added retaliation to the prohibitions on discrimination enforced by the Special Counsel. In 1995, OSC obtained judgments ordering *Hosel Miranda Washington* (*United States v. Hosel Miranda Washington*) to pay \$21,000 in civil penalties for violating the retaliation provisions by filing a state court lawsuit against individuals it believed provided information to OSC during an investigation.

INITIATIVES

Electronic Freedom of Information Act

	Perm. Pos	FTE	Amount
USNCB	1	1	\$383
Total	1	1	\$383

Proposed Actions

The initiative is to meet:

1. Electronic Freedom of Information Amendments of 1998 (EFOIA) and
2. Freedom of Information Act/ Privacy Act (FOIAPA) requirements.

The initiative is in response to the Attorney General's EFOIA and FOIAPA requirements. The USNCB has been disadvantaged because of its dependency on non-reimbursed staff members. Secondly, it will require additional funding to provide the electronic functionality of the EFOIA. Historically, the USNCB has used non-reimbursed staff members from the Criminal Division, Controller of the Treasury, and Veterans Administration. During the early 1990s, we trained a paralegal for this position; however, she left for a permanent position. As a result, the USNCB has been disadvantaged not only as to permanent staff but with its dependency on non-reimbursed staff members. Until January 1998, the USNCB had limited capability to support the FOIA electronically. Most of these efforts were manual case file searches. Since then the USNCB has stabilized and enhanced its Interpol Case Tracking System (ICTS) and Interpol Case Data File (ICDF). This permits electronic searches. The EFOIA will be integrated with those case databases to search, redact and maintain records. For these reasons, the USNCB is requesting a permanent FOIA (a management analyst) staff member and \$319,000 for hardware and software programming development. The USNCB has not requested additional resources in the President's 1997 budget.

Performance Measurement Tables Present by General Goal

GENERAL GOAL: 1) Ensures the rapid processing of customer requests to a appropriate law enforcement sources.									
PERFORMANCE INDICATOR INFORMATION					PERFORMANCE TARGETS AND ACTUAL RESULTS				
Type of Indicator	Performance Indicators	1996 Actual	1997 Actual	1997 Target	1997 Estimate	1998 Estimate	1998 Estimate	1998 Estimate	1998 Estimate
Input	1. USNCB Budget (millions of dollars) 2. FTE (Full time equivalent)	6.4	6.4	6.4	6.4	7.3	7.3	7.3	7.3
Output/ Activity	3. Requests Processed (RPT) A. Investigative B. Canadian Interface C. International MCIC (Stolen Vehicles)	14	18	17	18	21	21	21	21
Intermediate Outcome	4. Turnaround Time A. Investigative (days) B. Canadian Interface (secs) C. International MCIC (Stolen Vehicles) (secs)	1300	1442	1600	1600	1600	1600	1600	1600
End Outcome	5. Customer Service Compliance Standards (% of compliance) A. Investigative B. Canadian Interface C. International MCIC (Stolen Vehicles)	N/A	N/A	N/A	N/A	100	100	100	100
A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.									
Turnaround Time - From receipt of request, the time it takes to perform in-house functions and, thereafter, relay the request to the appropriate law enforcement source(s).									
Canadian Interface - A computerized interface between the U.S. and Canada, by which either can examine the criminal record data of the other country on persons, vehicles and property.									
B. Factors Affecting FY 97 Program Performance. Describe reasons for any significant differences between target levels of performance and estimates of actual performance (positive or negative).									
Expedient processing of request is contingent upon availability of financial and human resources; and continued implementation of OASAC.									
C. Factors Affecting Selection of FY 96 and 97 Targets. Provide information on the selection of target levels of performance, where necessary.									
Same as B.									
Indicators in indicator covering a requested 1998 program change. A performance indicator and target must be set for the results that will be achieved should resources be received.									

General Goals: 2) Ensure the rapid processing of investigative leads to the requesting law enforcement customer.

MISSION: To improve the productivity of the Department's legal activities through the application of office automation technology.

ORGANIZATIONAL GOALS:

1. To install automated systems that will satisfy the essential document production, data management, and communications requirements of the Department's litigating components, within terms defined by the Department's senior management.
2. To establish cost-effective standards for the electronic exchange of documents and messages among Departmental organizations and to connect Departmental litigating components to other Federal agencies and the public.
3. To institutionalize the planning and acquisition processes for office automation resources so as to
 - Build on the installed base of office automation systems in the litigating organizations;
 - Build cooperative processing systems wherever possible;
 - Ensure installation of compatible hardware and software; and
 - Move office automation and computing systems toward U.S. and international standards.

Base Program Description: In 1986, the Deputy Attorney General directed that the Department develop a comprehensive policy and strategy for the design and acquisition of automated systems for the six legal divisions, the U.S. Attorneys, and senior management. The objective was to achieve management efficiencies and productivity gains in office automation systems and to move the Department toward a more coordinated and unified approach to these systems.

Since 1986, the Department has developed and implemented a series of project plans for carrying out the Deputy Attorney General's direction. Beginning with the AMICUS system in 1986 and the EAGLE system in 1989, the Department began to implement coordinated office automation systems throughout the litigating organizations, except for the Antitrust Division. With the award of a contract for the implementation of the Justice Consolidated Office Network (JCON) in March 1996, the Department has now entered the final phase in its overall plan to achieve a fully integrated office automation network among the legal activities.

The implementation schedule adopted by the legal activities has been designed to proceed in accordance with the funds available in FY 1996 and anticipated in FY 1997. The conversion to JCON will begin in August 1996 with the organizations operating the oldest equipment, the AMICUS organizations--Civil Division, Civil Rights Division and

Environment and Natural Resources Division. As their conversion nears completion, the organizations operating the EAGLE network--Criminal Division, Justice Management Division, Tax Division and the U.S. Attorneys--will begin their conversion to JCON. As the largest organization with by far the most locations, the bulk of the U.S. Attorneys conversions to JCON will occur in FY 1998. Also, in FY 1998, the Department plans to launch the conversion of the last remaining legal activity, the Antitrust Division, to the JCON network.

The JCON contract provides for a wide range of system integration services, including design and engineering services, facilities management services, hardware and software installation and maintenance, and training. The contractor may also sell network hardware and software; however, the contractor is expressly precluded from selling workstations and printers to the government. The government will have to acquire such enduser computer commodities from other sources.

Although individual organizations are allowed to tailor their JCON installations to satisfy unique needs, the contract provides for a core architecture that will ensure full interoperability among the component organizations. The core architecture consists of the following elements:

- Electronic Mail: GroupWise
- Word Processing: WordPerfect
- Desktop Environment: Windows 95
- Network Protocol: TCP/IP
- Server Environment: Solaris

INITIATIVE

	Perf.	Est.	Amount
Legal Activities Office Automation			
JCON Implementation	\$7,100

Proposed Actions

This initiative seeks to address the following objectives:

1. To upgrade the technical capabilities of the office automation systems operating in DOJ legal activities.

2. To deliver the upgraded office automation system to the remaining legal division sites and a significant segment of U.S. Attorney offices.

The 1998 estimate for the Legal Activities Office Automation (LAOA) activity is based on an implementation schedule adopted by the JCOM Steering Committee and average costs formulated following the award of the JCOM contract. The projected costs for FY 1998 as derived from these formulations simply exceed the base funding level by \$7,100,000.

Less than one-half of Criminal Division and Tax Division implementation schedules are expected to spill over into FY 1998. For the U.S. Attorneys, however, FY 1998 will be the year in which most of their offices are converted to JCOM.

A few U.S. Attorney offices are scheduled for conversion prior to FY 1998, only 390 workstations out of a total of 9,817. FY 1998, however, is scheduled to see the conversion of 6,000 U.S. Attorney workstations to JCOM. In addition, the conversion of the 778 workstations in the Antitrust Division is scheduled for FY 1998.

For the Criminal Division, 155 out of 795 workstations are scheduled to be converted to JCOM in FY 1998. For the Tax Division, 175 out of 440 workstations will be converted to JCOM in 1998. In both Divisions, the balance are scheduled to be converted in the preceding year.

Department of Justice
Violent Crime Reduction Programs, General Legal Activities
Summary Statement
Fiscal Year 1998

Immigration enforcement is a continuum that involves the Immigration and Naturalization Service (INS), the immigration courts, the Board of Immigration Appeals (BIA) and the federal courts. The Violent Crime Control and Law Enforcement Act of 1994 provided additional resources across this continuum for initiatives on criminal aliens and asylum claims. These resources are expected to contribute to a significant increase in the number of deportable aliens facing expulsion from the United States. While the INS has direct responsibility for effecting an alien's removal, the Office of Immigration Litigation ensures the process by upholding administrative removal decisions challenged in court.

The Office's receipts are directly related to the pace of work by the Immigration Judges and the BIA. With the number of Immigration Judges doubling between 1994 and 1996 as a result of Violent Crime Reduction (VCR) resources, about half of the Office's 1996 receipts were a result of these new Immigration Judges. Through 1998, VCR case receipts are expected to increase 40 percent, to 858 cases, as a result of the infusion of VCR resources and the enforcement initiatives targeting criminal aliens, employment enforcement and border enhancement.

Base Program Description

Immigration enforcement is a continuum that involves the Immigration and Naturalization Service (INS), the Immigration courts, the Board of Immigration Appeals (BIA) and the federal courts. The Violent Crime Control and Law Enforcement Act of 1994 provided additional resources across this continuum for initiatives on criminal aliens and asylum claims. These resources are expected to contribute to a significant increase in the number of deportable aliens facing expulsion from the United States. While the INS has direct responsibility for effecting an alien's removal, the Office of Immigration Litigation ensures the process by upholding administrative removal decisions challenged in court.

Deportations are conducted as administrative hearings, the outcomes of which often are contested in court. Hearings for aliens serving criminal sentences are held prior to their release from custody through the Institutional Hearing Program (IHP). Following an Immigration Judge's decision regarding Immigration status, an alien may appeal the decision to the BIA. Any further appeals are pursued in federal courts, with the Office of Immigration Litigation litigating the vast majority of these cases, while the U.S. Attorneys handle the remainder.

Cases resulting from the dedication of Violent Crime Reduction (VCR) resources are identical in nature to those traditionally handled by the Office of Immigration Litigation. The majority can be categorized as "removal" cases -- individual challenges to orders of exclusion, expulsion and detention. The remainder are benefits denial cases and collateral attacks on INS enforcement actions.

The Office's receipts are directly related to the pace of work by the Immigration Judges and the BIA. With the funds of Immigration Judges doubling between 1994 and 1996, as a result of VCR resources, about half of the Office's 1997 receipts are attributable to new Immigration Judge decisions. Through 1998, VCR receipts are expected to increase 40 percent, to 858 cases, as a result of the infusion of VCR resources and the enforcement initiatives targeting criminal aliens, employment enforcement and border enhancement.

Accomplishments

The resources provided by the Violent Crime Control and Law Enforcement Act contributed substantially to the Office of Immigration Litigation's ability to win 97 percent of the personally and jointly handled cases decided or dismissed by the courts in 1996. This exceeded the 90 percent target set by the Office under the Government Performance and Results Act (GPRA). Specific examples of 1996 case accomplishments are included in the Office's GLA budget submission.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

NAME OF DECISION UNIT: Civil Division -- Violent Crime Reduction Programs		PERFORMANCE TARGETS AND ACTUAL RESULTS					
GOAL: To prevail on behalf of the United States in defense and assertion of Federal programs and policies.		PERFORMANCE INDICATOR INFORMATION					
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1998 Target	
Input	1. Number of cases pending beginning of year	N/A	0	162	365	504	
	2. Number of cases received during year	N/A	347	614	758	858

Outcome	4. Percent of cases won	N/A	98%	97%	90%	90%	
A. Definitions of Terms or Explanations for Indicators:							
<ul style="list-style-type: none"> • All Indicators: These indicators were first developed in 1995 as a result of the enactment of the Violent Crime Control and Law Enforcement Act of 1994. • Indicators 1, 2 and 3: Case counts for these indicators were developed in a manner consistent with prior budget submissions and refer to personally and jointly handled cases.¹ • Indicator 4: The percent of cases won is based on the number of cases that resulted in judgments or dismissals by the court.² 							
B. Factors Affecting FY 96 Program Performance:							
<ul style="list-style-type: none"> • All Indicators: The Office of Immigration Litigation's deep knowledge of immigration statutes and its ability to coordinate cases nationwide contributes to its success. 							
C. Factors Affecting Selection of FY 97 and 98 Targets:							
<ul style="list-style-type: none"> • Indicator 2: The 1997 and 1998 targets assume that additional cases will be generated as a result of the infusion of Violent Crime Reduction Trust Fund resources and other immigration initiatives. • Indicator 4: Targets are not being raised above 90 percent because the effect of the new immigration statutes on the Office's performance is uncertain. 							

¹ Case receipts represent an estimate of the subset of the Office of Immigration Litigation's total receipts resulting from the infusion of Violent Crime Reduction Trust Fund resources. In 1995, the percentage was 25 percent; for 1996 to 1998, the percentage is 50 percent.

² These percentages are the same as those cited in the Office of Immigration Litigation's GLA budget submission.

Justification of Request for Funds to Base
(Dollars in thousands)

Adjustments To Base.		Perm. Ftd.	Work Kasa	Amount
Increases:				
1.	1991 pay raise	\$111
This item represents the increase in the 1991 pay raise to be effective January 1, 1991, for all employees covered by the pay raise. The amount requested, \$111,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits.				
2.	Annualization and increase of 1992 pay rates	31
This pay annualization represents first quarter amounts (October through December) of the 1992 pay increase of 3.0 percent estimated to be effective January 1992. The amount requested, \$31,000, represents the pay amounts for three-quarters of the year.				
3.	General pricing level adjustments	77
This item represents the adjustments to selected expense categories. The increased costs identified result from applying a factor of 3.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to capital, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.				
Total increases				319

ANTITRUST DIVISION

ANTITRUST DIVISION FOR THE GOOD ECONOMY

Budget Request for Fiscal Year 1998 Summary Statement

The Antitrust Division is requesting a 1998 budget of \$74 positions, \$33 workyear, and \$97,542,000. The requested resources come from three sources, direct funding (158 positions, \$24 workyear, and \$17,842,000), primary feeing fees to be collected in 1998 (606 positions, \$72 workyear, and \$70,000,000), as cited in the Division's appropriation language, and a \$37,542,000. The requested funds are critical based upon the Division's rapidly expanding workload and the increasing complexity of the investigations and the Division is tasked to pursue for the benefit of American consumers and businesses.

REVENUE ASSUMPTIONS

Filing fees of \$45,000 are paid by persons acquiring voting securities or assets who are required to file premerger notifications by the Hart-Scott-Rodino (HSR) Antitrust Improvements Act of 1976 (15 U.S.C. 18a) and the regulations promulgated thereunder. These fees are divided evenly between and credited to the appropriations of the Federal Trade Commission and the Antitrust Division.

(Note that the President's 1998 budget references a proposal (PAYGO provision contained in the Federal Trade Commission Section) to restructure HSR fees to generate additional revenue to be credited to the Treasury. The proposal will not increase funding for the Antitrust Division nor the extent of its reliance on HSR filing fee revenue, and will not affect the Antitrust Division's budget request as presented in this submission. The proposal will be submitted at a later date by the Administration as part of its legislative package.)

CRITICAL MISSION OF THE ANTITRUST DIVISION

Simply stated, the mission of the Antitrust Division is to protect competition and consumers in increasingly international and technology-driven markets through sound and reasoned enforcement of the nation's antitrust laws. This mission is accomplished by the Division's comprehensive over a wide spectrum of industries, ensuring a level playing field for U.S. businesses, both nationally and internationally, and the establishment and maintenance of a competitive economy for American consumers.

To carry out this mission, the Division has undertaken major initiatives in the past year in the areas of mergers, criminal enforcement, civil conduct, and international enforcement. Attention also has been focused on certain critical industries, including the computer industry, telecommunications, health care, banking and financial services. The Division's record in the past year is impressive, but it is only a beginning. An improved funding base is critically required in 1998 to continue the Division's drive to maintain an adequate level of antitrust enforcement in the face of the challenges of international and technology-driven markets. The Division's budget request for 1998 is \$97,542,000, an increase of \$37,542,000 over the 1997 budget. This increase is necessary to maintain the Division's high quality investigations and civil and criminal enforcement, and to ensure that the Division can continue to provide the highest quality service to the American people. The Division's budget request for 1998 is \$97,542,000, an increase of \$37,542,000 over the 1997 budget. This increase is necessary to maintain the Division's high quality investigations and civil and criminal enforcement, and to ensure that the Division can continue to provide the highest quality service to the American people.

RECORD-SETTING MERGER ACTIVITY

The American economy is in the midst of a record-setting merger wave. After setting a record in 1995, mergers and acquisitions activity reached a new record high of \$658.8 billion in 1996, according to the Federal Reserve Bank of New York. Over the past five years, the rate of merger and acquisition activity has increased by 100 percent. In 1996, the rate of merger and acquisition activity was 1.2 percent of the U.S. economy, up from 1.0 percent in 1995. Along with growth, there is an emphasis on global competition. As a result, U.S. companies are stepping up their acquisitions and partnering activities. In the telecommunications area alone, The New York Times, January 2, 1997, stated that, "Deregulation and the dissolution of international trade barriers are fueling a white-hot level of activity in telecommunications, broadcasting and utilities, which together accounted for 27 percent of all the deals [in 1996]. Activity in other sectors is expected to remain high, as well, due to a number of factors that tend to promote merger and acquisition activity in the economy. As noted in The New York Times, January 2, 1997, "The climate [in 1996] was as good as it gets. Because these conditions aren't expected to change, 1997 is shaping up to be another strong year, with experts say."

The higher level of merger activity has been coupled with an **emphasis on the expediency** of the matters reviewed by the Division. Unlike the conglomerate mergers of the 1960s, which did not involve direct competition, the "strategic" mergers of the 1990s often raise serious competitive issues, as well as new efficiency defenses. As a result, greater scrutiny of the new wave of mergers is required. In addition, in many cases, companies that are merging involve "high-tech" industries in which technology is advancing at a blistering pace. In these cases, it is critically important that the Antitrust Division has the resources to keep up—to permit efficiency enhancing mergers to go forward, while bidding or requiring modifications that would reduce competition and increase costs for consumers.

The recent merger wave has focused on the telecommunications, broadcast, banking, health care, and utility industries, many with an effect on the U.S. economy and in which the federal government has a strong interest. The Department of Justice's Antitrust Division has a lead role in federal antitrust enforcement. In particular, the Division is responding to a surge in federal antitrust enforcement activity. The Division has a lead role in federal antitrust enforcement. In particular, the Division is responding to a surge in federal antitrust enforcement activity. The Division has a lead role in federal antitrust enforcement. In particular, the Division is responding to a surge in federal antitrust enforcement activity.

The ramifications of the current wave of mergers will be felt for generations to come. Major reviews should be timely and no broader than necessary so as not inappropriately to burden the companies attempting to merge. The fate of American businesses to compete fairly on a level playing field, and the interests of American consumers and shareholders of Americans to be able to buy the best possible products and services at the lowest possible price are the issues at stake. In order to keep up with and carefully review the tremendous number of mergers and acquisitions that are being proposed, the Antitrust Division critically needs additional staff and resources.

Vigorous competition is critical to assure the rapid innovation that generates continued advances in America's standard of living and American competitiveness in world markets. The Clinton's civil non-merger enforcement program is a critical part of this process. Through this program, civil enforcement actions can be pursued to combat anticompetitive conduct that does not rise to the level of a criminal violation, but that unreasonably raises prices for American consumers or otherwise threatens innovation.

In 1998, the Division filed 12 consent decrees plus four 7a decrees (the largest number in 18 years) to stop anticompetitive business practices through civil remedies. Examples of past remedies taken by the Division that emphasize the importance of this program include a consent decree with the Division against Pilkington (PILCO), a British firm, and its U.S. subsidiary for conspiring to restrain competition in the U.S. market for float glass by allocating the \$10 billion per year glass industry—effectively foreclosing U.S. firms from foreign markets. As the result of the Division's action in this matter and the negotiation of a consent decree with Pilkington, U.S. firms will be able to compete for the construction and operation of the approximately 60 new glass plants expected to be built worldwide by the year 2000, resulting in an estimated increase in U.S. export revenue of as much as \$1.25 billion.

Additional matters — in which the Division actions have resulted in significant savings for American consumers or opportunities for U.S. businesses — have involved high-tech industries such as personal computer operating systems in which, as the result of Division action, opportunities were maintained for local operating systems to compete in a market formerly left to foreign suppliers. In the health care industry, the Division has also been particularly active in protecting the health care industry from unfair competition, and recent cases and investigations by the Division have involved a wide variety of health care matters affecting all 50 states, many focusing on anticompetitive conduct by competing doctors and hospitals to minimize competition from managed care plans. Working closely with state attorneys general, the Division needs to maintain and increase its attention in this area to help ensure that American consumers continue to be able to afford quality health care at the lowest possible price.

These are just a few of the civil non-merger matters that have been pursued by the Division, though the number of matters being identified to the Division for investigation is increasing as a phenomenal rate. The Division currently has 48 ongoing civil non-merger investigations, including 20 new matters opened in 1988. Investigations of alleged monopolistic behavior have been a significant part of the Division's workload since 1983 when only three such investigations were opened. The numbers for both 1984 and 1986 reflect major increases in the Division's workload, as monopolization investigations are often the most complex and resource demanding matters handled by the Division. As evidenced by the Pilkington matter, however, the return to American consumers from such investigations can be substantial, and such investigations can be of broad benefit.

With the criminal case, the Antitrust Division has focused increasingly on national and international price-fixing conspiracies and other cartels with substantial consumer impact. In the first three months of 1997, \$115 million in fines were imposed on 10 corporations and 5 individuals. In 1997, the Justice Division's *Medford Companies (MFC)* case and *United Fruit (UF)* case resulted in \$10 million and the largest criminal antitrust fine ever—in one example of the type of international price-fixing conspiracies the Division is focusing on currently. *United Fruit* conspired to manipulate the banana market in the United States and other foreign markets. The *MFC* case involved a conspiracy to fix the price of a popular brand of baby food. To make this case, the Division used its best use of combined federal-state resources. In 1997, we are expected to bring the amount in 1994 (the highest record year with \$41.8 million in penalties). To make this case, the Division used its best use of combined federal-state resources. We have expanded our cooperation with state attorneys general, allowing the Division more effectively to coordinate investigations of antitrust affecting local or regional commerce. As

ANTITRUST DIVISION SOLUTIONS AND EXPENDITURE

a direct result, the grand jury investigations being pursued by the Division are more significant, they are focused on **big** companies and individuals, they involve more complex **conspiracies**, they increasingly have **international dimensions**, and they involve more overall dollars of commerce. The result is more enforcement impact per dollar of Division expenditure. These investigations necessitate much larger discovery and case review, and far greater prosecutorial manpower, requiring the dedication of a significant Division workforce in order adequately to protect markets from anticompetitive practices.

Examples of matters that currently are being reviewed by the Antitrust Division for possible criminal violations include: international conspiracies among domestic and foreign firms to fix prices and allocate markets around the globe in the food and feed and lives industries, affecting several billion dollars of commerce annually; a worldwide cartel to fix prices of a commonly used chemical, with target companies located on several continents, and affecting billions in commerce; an international conspiracy to rig bids on construction projects, affecting \$100 to \$200 million in commerce; a nationwide conspiracy among U.S. manufacturers of a commercial product affecting several hundred million to one billion dollars of commerce; a nationwide conspiracy to allocate contracts of certain products in the promotion and advertising industry affecting approximately \$100 million in commerce annually; and an international conspiracy to fix fees by certain distributors in the food industry, affecting over \$500 million in commerce annually. These are only a few of the many matters that currently are being pursued by the Division. The Division's investigations are far from exhaustive, and the Division is constantly reviewing new information and evidence to determine whether it is necessary to detect criminal antitrust crimes so that American businesses can fairly compete based on the merits, and American consumers continue to pay reasonable prices for goods and services.

CURRENT INADEQUATE STAFFING LEVEL

The Antitrust Division today is staffed at approximately 200 employees below the level it was in 1980. Meanwhile, the U.S. economy has more than doubled in size, markets have become increasingly international, and litigation is far more complex and technologically advanced. Additional funding is required to allow the Division to staff more appropriately. The merger wave the Nation is experiencing has put antitrust enforcement on the front page of America's newspapers and international business publications.

In considering the Division's request for a budget increase in 1998, it should be noted that any increase in the Division's resources pays direct, substantial dividends to the U.S. Treasury. The largest part of these dividends comes from decreased prices for goods and services that the Federal Government buys, a savings estimated at \$400 million to \$1.8 billion annually. The Division's investigations also result in increased competition and lower prices for goods and services that the Federal Government sells, a savings estimated at \$1.5 billion annually. The Division's investigations also result in increased competition and lower prices for goods and services that the Federal Government sells, a savings estimated at \$1.5 billion annually. The Division's investigations also result in increased competition and lower prices for goods and services that the Federal Government sells, a savings estimated at \$1.5 billion annually.

In addition to major antitrust enforcement initiatives, the Division continues to devote itself to ensuring that its organizational structure and functions continually are reviewed in order to meet the needs of the Nation. The Division's resources are being reviewed in order to ensure that the Division is able to meet the needs of the Nation. The Division's resources are being reviewed in order to ensure that the Division is able to meet the needs of the Nation. The Division's resources are being reviewed in order to ensure that the Division is able to meet the needs of the Nation.

The matters highlighted above, and many other important cases enumerated briefly in this budget request, reflect the priorities of the Administration and the important interests of American businesses and consumers in proactive, effective antitrust enforcement. Even in this era of severe budget restraints, **Antitrust is a high priority for the Administration and the public.** Economic stimulation and technological innovation will be a **high priority for the Administration and the public.** Antitrust is a high priority for the Administration and the public.

The Division's revenue neutral request for a program increase of 43 positions, 22 workyears and \$3,847,000 to be derived from fee funding will help assure strong and effective antitrust enforcement which will provide big dividends for all Americans.

I. BASIC PROGRAM DESCRIPTIONS

To provide effective representation, the Division:

- prepares briefs in appellate cases before the Supreme Court as authorized by the Solicitor General;
- represents the interests of the United States in the courts of appeals in all civil and criminal cases brought by the United States under the Federal appellate laws;
- reviews challenged decisions of the Federal Communications Commission, the Federal Maritime Commission and the Nuclear Regulatory Commission, and prepares an appeal position for the United States and
- prepares and files appellate briefs in the courts of appeals and the Supreme Court in selected private appellate cases. The Division's responsibility for appeals from decisions by district courts is limited cases and for participation in appellate review is defined by 28 U.S.C. § 1254, 42 U.S.C. § 4354, and 49 U.S.C. § 1604. Authority to represent the United States in proceedings to review orders of the Nuclear Regulatory Board, Federal Communications Commission, Federal Maritime Commission and the Nuclear Regulatory Commission is contained in 28 U.S.C. § 2341-2350.

The Federal Appellate activity has been reviewed totaling 18 positions (including 10 attorneys), 14 workyears, and \$1,000,000.

II. ACCOUNTS RESPONSIBILITY

A. BUDGETARY CHARGES

- In the Supreme Court, the Division filed four briefs in 1986, including one appellate brief. The Division filed three appellate briefs with the Court in 1986. For example:
- After the Division filed an appellate brief opposing certiorari in *James Incorporated v. Tarrant Medical Foundation, Inc.*, No. 85-1274, the parties settled their dispute and the petition was voluntarily dismissed.
- In *Quilley Company v. Jackson Drilling Co., Inc.*, 63 U.S.L.W. 4227 (decided March 26, 1986), the Division, joined by the Civil Division, successfully argued that a color map solely of the Lumber's Act requirements for trademark protection.

B. Counts of Appeals

Major results: In 1988, the Division won all 13 of the cases decided by the courts of appeals. Prior to that, in 1986, the Division won 8 of the 11 cases decided by the courts of appeal. The most significant decisions include:

- **United States v. Microsoft**: The appeal was argued on April 24, 1988, before a panel of the U.S. Court of Appeals for the District of Columbia Circuit consisting of Chief Judge Edwards and Circuit Judges Silberman and Buckley. The question on appeal was whether District Court Judge Shirley Sporkin erred in refusing to enter the consent decree negotiated by the United States and Microsoft in July 1984. The Division contended that the District Court exceeded its authority under the Tunney Act, 15 U.S.C. (1601-1606), by considering the government's decision not to bring or remedy a different antitrust case and by imposing a consent decree on the government. The court affirmed the District Court's decision and remanded the case to the District Court for further proceedings. On June 15, 1988, the District of Columbia Court of Appeals affirmed the District Court's decision and remanded the case to the District Court for further proceedings. On August 21, 1988, U.S. District Court Judge Thomas Penfield Jackson entered the decree, giving effect to a decree that required Microsoft to provide information to the government regarding its software development process.
- **United States v. Hinder Oil Co., Inc. of Chesapeake, Texas**, 51 F.3d 1296 (9th Cir. 1995). The court first affirmed the defendant's conditions for fixing gasoline prices. Agreeing with our interpretation of the Sherman Act, the court then reversed the sentences imposed and remanded the case for resentencing. The court held that the volume of commerce attributable to a particular defendant consisted of price-fixing includes all sales of the specific types of goods or services which were made by the defendant or his principal during the period of the conspiracy, without regard to whether individual sales were made at the target price.

Note: Why/Loss rates for our years are not predicted.																

The Division filed antitrust suits in four significant courts of appeals during 1988 and filed six antitrust suits in 1989. These include:

- In **Florida Municipal Police Ass'n v. Florida State and Local Police Ass'n**, No. 94-2220 (11th Cir.), the Division successfully argued that the fixed rate doctrine does not bar an antitrust damage claim when there is no fixed rate.

**ANTITRUST DIVISION
Policies and Procedures**

- In *Ballantyne, Inc. v. West Laboratories, Inc.*, No. 85-102 (10th Cir.), the Division unsuccessfully argued that a contract between a customer and the seller in an alleged tying scheme can be a "contract" in restraint of trade or commerce that is banned under Section 1 of the Sherman Act. The Division recently filed an *Amicus* brief in support of a suggestion for rehearing *en banc* in this case.
- In *Columbia Steel Casting Co., Inc. v. Portland Cement Electric Company*, Nos. 83-35602, 83-35603 (9th Cir.), the Division filed an *Amicus* brief in support of a petition for writ of habeas corpus in which it argued that the court of appeals had applied the wrong standard in determining the scope of immunity from the antitrust laws for private parties under the state action doctrine.
- The Division has also filed *amicus* briefs in *Blue Cross and Blue Shield United of Wisconsin, et al. v. Manifold Clinic, Inc.*, No. 85-1084 (7th Cir.); *William D. Erwin, M.D. v. Harbor Community Hospital, Inc.*, No. 85-2134 (11th Cir.); *Kosium Electronics, Inc. v. A.R. Consumer Products, Inc.*, No. 84-2084 (11th Cir.); and *Motor Corp. Ltd. v. William Greengard Services, Inc.*, No. 85-7068 (3d Cir.).

1. BASE PROGRAM DESCRIPTION:

The purpose of the program is to deter private cartel behavior by investigating and challenging violations of Section 1 of the Sherman Act. A wide range of investigative techniques is used to detect violations and to identify and prosecute violators. The program is designed to be a long-term effort to prevent and deter private cartels. The program is designed to be a long-term effort to prevent and deter private cartels. The program is designed to be a long-term effort to prevent and deter private cartels.

The Sherman Act is both a civil and a criminal statute. Historically, the Division has proceeded by criminal investigation and prosecution in cases involving civil antitrust violations, for example, price fixing, bid rigging, and horizontal customer and territorial allocations. If evidence of a criminal violation is significant, a grand jury may be empowered to investigate immediately. In certain situations, however, the conduct may appear to be a civil violation of law, but civil rather than criminal prosecution may be appropriate. In addition, other conduct proscribed by Section 1 of the Sherman Act is analyzed under the rule of reason and is proscribed only, not criminally. In such cases, civil compulsory process is used to investigate the alleged violation. Both criminal and civil compulsory processes are available to the detection of antitrust violations.

The Division's vigorous prosecution of private horizontal restraints is essential. Cartel behavior has no redeeming economic virtues. Agreements among competitors entered into for the purpose of artificially restricting output and raising prices do not yield organizational efficiencies or economies of scale; they simply rob consumers. State and local law enforcement efforts, while contributing to the prevention of locally-oriented cartel behavior, cannot cope with the complex interstate and international nature of conspiracies investigated and prosecuted by the Division. Moreover, many states lack effective criminal sanctions essential to deterrence of such conduct.

The Termination and Prevention of Private Cartel Behavior activity has base resources totaling 219 positions (including 100 attorneys), 212 workyears, and \$25,051,000.

2. ACCOMPLISHMENTS AND ONGOING INITIATIVES

A. CRIMINAL ENFORCEMENT

Criminal enforcement of the antitrust laws against related restraints of trade has been and continues to be one of the Division's core enforcement areas. We have increasingly focused our resources upon the investigation and prosecution of criminal antitrust violations. Criminal antitrust violations are offenses that are punishable by imprisonment and/or fines. Criminal antitrust violations are offenses that are punishable by imprisonment and/or fines. Criminal antitrust violations are offenses that are punishable by imprisonment and/or fines.

ANTITRUST DIVISION Activities and Expenses

The Division's criminal enforcement program has remained vigorous and is being pursued diligently by the Division through its ongoing Quality Criminal Cases Initiative in which outreach efforts are made with Federal and State prosecutors as well as in the Division's continued efforts to identify and prosecute criminal violations of the antitrust laws. In 1997, the Division filed 42 criminal cases against 41 corporations and 22 individuals, with fines of over \$26.8 million in criminal fines imposed on defendants. In the first four months of 1997, \$11.3 million in criminal fines have been imposed on 10 corporations and 5 individuals. Total criminal fines assessed in 1997 are projected to be the first time the Division has assessed more than \$24.5 million in criminal fines. The Division's criminal enforcement program has remained vigorous and is being pursued diligently by the Division through its ongoing Quality Criminal Cases Initiative in which outreach efforts are made with Federal and State prosecutors as well as in the Division's continued efforts to identify and prosecute criminal violations of the antitrust laws. In 1997, the Division filed 42 criminal cases against 41 corporations and 22 individuals, with fines of over \$26.8 million in criminal fines imposed on defendants. In the first four months of 1997, \$11.3 million in criminal fines have been imposed on 10 corporations and 5 individuals. Total criminal fines assessed in 1997 are projected to be the first time the Division has assessed more than \$24.5 million in criminal fines. The Division's criminal enforcement program has remained vigorous and is being pursued diligently by the Division through its ongoing Quality Criminal Cases Initiative in which outreach efforts are made with Federal and State prosecutors as well as in the Division's continued efforts to identify and prosecute criminal violations of the antitrust laws. In 1997, the Division filed 42 criminal cases against 41 corporations and 22 individuals, with fines of over \$26.8 million in criminal fines imposed on defendants. In the first four months of 1997, \$11.3 million in criminal fines have been imposed on 10 corporations and 5 individuals. Total criminal fines assessed in 1997 are projected to be the first time the Division has assessed more than \$24.5 million in criminal fines.

Several corporations have been sentenced following conviction of criminally violating the Sherman Act or agreed to a fine in connection with a plea of guilty:

- On January 26, 1997, a New Jersey-based subsidiary of the German pharmaceutical giant Bayer pled guilty and agreed to pay a \$10 million fine. The second largest criminal justice fine ever for a pharmaceutical company was assessed against Bayer for its role in a worldwide conspiracy to fix prices to allocate sales in the yin and yang markets worldwide. Previously, on August 27, two Japanese companies and the U.S. subsidiary of a South Korean company, and three of their executives, admitted to conspiring to fix prices and allocate sales in the yin and yang markets worldwide. The defendants have agreed to pay more than \$20 million in fines. On December 3, three former top ADM executives and one Japanese executive were indicted for conspiring to fix prices and allocate sales in the yin and yang markets worldwide. The defendants have agreed to pay a \$1.25 million fine for its role in the conspiracy. Lytle, a \$600 million a year industry, is a food additive and preservative produced from various sugars. It is a \$1.2 billion a year industry and wine producers – paid millions more to buy the Lytle additive. Citic bid is a food additive and preservative produced from various sugars. It is a \$1.2 billion a year industry. Manufacturers of soft drinks, processed foods, detergents, pharmaceutical and cosmetic products, paid millions more to buy the Citic additive, which ultimately caused consumers to pay more for those products. The Division's food and food additive investigations continue.
- On September 6, 1995, Dyno Nobel, the world's second largest commercial explosives manufacturer, agreed to plead guilty to conspiring to fix the prices of commercial explosives and pay \$15 million – the largest fine ever imposed in a criminal justice matter under the Sherman Act. On August 22, another of the world's largest manufacturers of commercial explosives, ICI Explosives USA, Inc., headquartered in Texas, pled guilty and was sentenced to pay a \$10 million fine for conspiring to fix the prices of commercial explosives. On September 26, 1996, an Ohio company and its Indiana regional manager agreed to plead guilty and pay more than \$10 million in criminal fines for conspiring to fix the prices of commercial explosives. To date, these investigations have resulted in criminal fines of \$26 million. In the U.S., sales of commercial explosives amount to \$1 billion per year. Previously, on September 19, five Pennsylvania and one Ohio distributor of commercial explosives pled guilty and agreed to pay more than \$800,000 in criminal fines for conspiring to fix prices and rig bids in the sale of these goods. On March 6, a Delaware company agreed to plead guilty and pay \$850,000 in criminal fines for rigging bids on commercial explosive contracts sold to customers in Alaska.
- On August 26, 1996, a Michigan door manufacturer agreed to plead guilty and pay \$1.55 million fine that constitutes a 2½ year investigation of the home door industry. With this plea, total criminal fines of \$8.5 million will have been assessed as the result of the Antitrust Division's investigation of the \$600 million per year residential flat door industry.
- In a case which involved the first criminal justice prosecution of a Japanese corporation headquartered in Japan, Kawasaki Specialty Papers and Mitsubishi Corporation agreed to pay \$4.5 million and \$1.26 million in criminal fines for conspiring to fix prices on thermal fax paper sold in North America. To date, a total of \$10.7 million in fines have been imposed as a result of the Division's fax paper investigations, which are continuing.
- Miles, Inc. pled guilty to fixing the price of steel wool pads and agreed to pay a fine of \$4.5 million, a matter brought to our attention as the result of the Division's corporate amnesty program, highlighted in this section.
- Borden Inc. and its affiliate paid an aggregate of \$13.2 million in fines in connection with convictions for bid rigging in school milk contracts.
- The Stanley Works area fined \$5 million after a conviction of conspiring to fix prices on architectural hinges.
- On September 30, 1996, the Division filed criminal price-fixing charges against Mrs. Burt's Bees, the nation's largest privately-owned bakery, resulting from an investigation into alleged price fixing and bid rigging in the wholesale bread and bread products industry. On May 30, 1996, the U.S. District Court in Dallas imposed a fine of \$10 million and put the corporation on five years probation. This was the first time a court imposed a fine of \$10 million on a defendant in a criminal justice case.
- On January 23, 1997, a Long Island, New York display materials manufacturer and one of its former salesmen agreed to plead guilty to conspiring to defraud the FBI by concealing cash payments made to a Philip Morris Inc. purchasing agent in order to secure the company's business. On January 6, 1997, a former alcoholic beverages purchasing agent in Florida and Michigan pleaded guilty to conspiring to defraud the employees of about \$650,000 he received as kickbacks from suppliers of display materials used to advertise and promote products in retail stores. On October 28, 1996, a New York executive and two of his companies were indicted on seven counts of bid-rigging and tax fraud in relation to contracts for the supply of point-of-purchase display materials used to advertise and promote products in retail stores. To date, the investigation and prosecution of this case has resulted in the conviction of two individuals and the imposition of criminal fines of \$10 million and \$100,000. The Division is continuing its investigation of this case and has related offenses in the display industry. In addition, two individuals and four corporations are awaiting trial in New York on charges arising from the same investigation.

On January 26, 1997, a New Jersey-based subsidiary of the German pharmaceutical giant Bayer agreed to pay a \$50 million fine for conspiring to fix prices for the widely used blood additive citric acid. However, a federal judge in federal court in San Francisco ruled that the fine was too high because the company had not conspired to fix the price of the ingredient, which is used in soft drinks, processed foods and cosmetics. Hans Hertenstein, a senior associate at the German headquarters, was placed under house arrest for 150,000 DM (\$80,000) for his role in the investigation into illegal cartels and price-fixing in the food and feed additive industry that has resulted in \$170 million in criminal fines. The \$50 million fine is the second-highest globalized in corporate crime. Investigations into the lysine, citric acid, and high fructose corn syrup markets continue.

American competitiveness hinges on the establishment and maintenance of a fair and level playing field that provides for competition on the merits. With increased support provided by the Congress in the International Antitrust Enforcement Assistance Act, the Division is moving aggressively to ensure that businesses throughout the world who seek to compete in American markets are held to compliance with American law. The increasing globalization of economic activity accounts for some of the Division's increased workload and a concomitant increase in the complexity of the Division's investigations.

[illegible]

ANTITRUST DIVISION SOURCES AND FINDINGS

Ex Parte

The Division continues to pursue investigations related to the marketing of Macaroni. As part of the effort, United States authorities are continuing their joint investigation with Canadian authorities into the industry pursuant to the Mutual Legal Assistance Treaty (MLAT) between the two countries. At the same time, the Division is continuing its investigation into the industry's vertical integration. These investigations are ongoing, with recent proceedings including:

After a two-year coordinated effort between the United States and Canadian antitrust investigators, on July 14, 1984, the break up of a \$120 million a year international cartel in the fast paper market was achieved. (As called below, the matter is continuing based upon the initial success.) In that case, charges were filed in the United States against a Japanese corporation, two American subsidiaries of that corporation, and two Japanese individuals. The charges were filed in the United States against the Japanese corporation and its two subsidiaries, and in Canada against the two Japanese individuals. The case represented the first joint criminal antitrust prosecution with Canadian competition authorities.

Several additional examples of recent successes in the Division's fast paper market include: On September 28, 1983, two Japanese paper corporations, Mitsubishi Paper Mills Ltd. and Nippon Paper Co., charged Nippon Paper Co. Ltd. of Japan, Nippon Paper Industries Co. Ltd. also of Japan, and an executive of Mitsubishi Paper Mills Ltd. of Japan with price fixing in the thermal fast paper industry. This matter is on appeal, and oral arguments were held on January 8, 1987. On April 24, 1986, the Division obtained two indictments of three fast paper industry executives for price fixing in the industry (two Japanese executives of Nippon Paper Company and one Japanese executive of Mitsubishi Paper Mills). On April 26, 1986, the Division filed a criminal information charging Nippon Paper Company with participation in a 1981 conspiracy to increase the price of fast paper sold in the U.S. Nippon paid guilty to the charge and was fined \$225,000.

Discussions

Another matter that recently has not with successful prosecution involves disposable plastic disposables. Disposable plastic disposables is a \$100 million a year international industry. This investigation uncovered price fixing in that industry in the United States and has led to guilty pleas from three corporations and seven executives. The companies were fined \$8.1 million and the individuals received jail sentences ranging from eight to 21 months in prison. On June 28, 1986, a grand jury in Philadelphia charged the Arnold Corporation of Watertown, Massachusetts, Arnold's President, Depost O'Pradon, Inc., and Depost-O's president with price fixing. This is the fifth case to be filed in the government's ongoing investigation.

	1984	1985	1986	1987	1988	1989	1990
Grand Juries (pending at start of year)	133	96	84	79	79	6	64
Grand Juries with International Aspects	22	25	27	33	36	3	39
% of Grand Juries with International Aspects	16.6%	26.2%	32.1%	41.8%	45.8%	0%	48.4%

3. Estimates of Bid-Rigging and Price-Fixing

As clearly evidenced by criminal fines totaling over \$100 million and guilty pleas in 1987 by Archer Daniels Midland Company to charges of conspiracy in two international food and feed additive marketing (Betta and Archer Daniels Midland), the Division is continuing to investigate possible conspiracies in a food and feed additive market. (The Division also is investigating possible conspiracies in a food and feed additive market - high fructose corn syrup.) The Division's success in further evidence in other diverse markets, such as commercial explosives, with the guilty pleas of Dyno Nobel and ICI Explosives in September and August 1986, respectively, with combined assessed criminal fines of \$28 million against just these two companies. Other an investigation that begins with limited evidence involving a particular industry or geographic area will reveal through further investigation such areas of criminal conduct. High priority concentration, waste management, oil-drift, bottling, and steel and alloy pipes. In recent years, the Division has expanded its criminal investigations and prosecutions to include industries that typically have not been the subject of criminal antitrust activity, such as the health care industry, where there may have been a long-held sense that "medical professionals" are an exception. However, price fixing and/or bid rigging by white-collar professionals is no less damaging than similar violations by retail retailers, road builders or electrical contractors.

ANTITRUST DIVISION Initiatives and Successes

A significant area of activity has been the numerous investigations into bid rigging on contracts to supply dairy products to public institutions and private schools. To date, the Division has filed a total of 132 criminal cases in the dairy industry amounting to \$2.5 million in fines and \$4.5 million in civil damages. Total fines and civil damages amounted to \$68.0 million. New cases continue to be developed as the result of grand jury and investigatory actions.

4. Cooperation with Department of Defense -- "Training" Investigations

The Division has been assisting various branches of the Department of Defense to determine whether they have been receiving competitive bids on some of the most technologically advanced equipment used in the military. In the past, the Division has been successful in identifying bid rigging in the defense industry. For example, the Division has worked with the U.S. Army and U.S. Air Force in seeking competitive bids on specific munitions systems, whether the Army and Air Force should receive compensation and how much in the event they have been receiving non-competitive bids, and whether munitions need to be replaced to change munitions industry bidding practices. A success in this area was the settlement awarded under which Alantech Tech Systems Inc. and Alantech agreed to pay the Federal Government \$12 million in relation to their alleged bid rigging practices. Production of cluster bombs. The constant desire to achieve substantially all the objectives of the Army and the Division in ensuring the viability of competition in the cluster munitions industry; monetary relief and the Department of Defense's interest in the cluster munitions industry; and the Division's interest in the cluster munitions industry. The Division has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry.

Since early 1992, the Antitrust Division has been working with the Defense Fuel Supply Center (DFSC) to identify its staff to encourage them to call our attention to matters of antitrust concern. In the past, the Division has been successful in identifying bid rigging in the defense industry. For example, the Division has worked with the U.S. Army and U.S. Air Force in seeking competitive bids on specific munitions systems, whether the Army and Air Force should receive compensation and how much in the event they have been receiving non-competitive bids, and whether munitions need to be replaced to change munitions industry bidding practices. A success in this area was the settlement awarded under which Alantech Tech Systems Inc. and Alantech agreed to pay the Federal Government \$12 million in relation to their alleged bid rigging practices. Production of cluster bombs. The constant desire to achieve substantially all the objectives of the Army and the Division in ensuring the viability of competition in the cluster munitions industry; monetary relief and the Department of Defense's interest in the cluster munitions industry; and the Division's interest in the cluster munitions industry. The Division has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry.

These investigations and the activities described above are all part of a comprehensive program to identify and eliminate bid rigging in the defense industry. The Division has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry. For example, the Division has worked with the U.S. Army and U.S. Air Force in seeking competitive bids on specific munitions systems, whether the Army and Air Force should receive compensation and how much in the event they have been receiving non-competitive bids, and whether munitions need to be replaced to change munitions industry bidding practices. A success in this area was the settlement awarded under which Alantech Tech Systems Inc. and Alantech agreed to pay the Federal Government \$12 million in relation to their alleged bid rigging practices. Production of cluster bombs. The constant desire to achieve substantially all the objectives of the Army and the Division in ensuring the viability of competition in the cluster munitions industry; monetary relief and the Department of Defense's interest in the cluster munitions industry; and the Division's interest in the cluster munitions industry. The Division has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry.

Moreover, these cases must generally be prosecuted on a case-by-case basis, because of the desire to make a decision, if possible, before a contract is entered into in order to avoid damages to DOD. For example, one investigation involved a bid rigging case involving the purchase of a product, which means that developing information is more difficult than in other cases because there are no available third parties to provide information to help the investigation.

5. Cooperation with other agencies

The Division's Quality Criminal Cases Initiative is a multi-faceted program to educate other law enforcement agencies about the antitrust laws, to encourage them to refer possible cases to the Division, and to enhance communication and cooperation between and among agencies. As part of the initiative, the Division's Field Offices established liaison relationships with the FBI and U.S. Attorneys Offices in their jurisdiction over the past year. The initiative also has resulted in improved working relationships with the Criminal Division, the Civil Division's Fraud Section, Inspector General's Office at various Federal agencies, and the Department of Justice's Office of Inspector General. The Division has also been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry. For example, the Division has worked with the U.S. Army and U.S. Air Force in seeking competitive bids on specific munitions systems, whether the Army and Air Force should receive compensation and how much in the event they have been receiving non-competitive bids, and whether munitions need to be replaced to change munitions industry bidding practices. A success in this area was the settlement awarded under which Alantech Tech Systems Inc. and Alantech agreed to pay the Federal Government \$12 million in relation to their alleged bid rigging practices. Production of cluster bombs. The constant desire to achieve substantially all the objectives of the Army and the Division in ensuring the viability of competition in the cluster munitions industry; monetary relief and the Department of Defense's interest in the cluster munitions industry; and the Division's interest in the cluster munitions industry. The Division has been successful in identifying bid rigging in the defense industry and has been successful in identifying bid rigging in the defense industry.

o In 1992 and 1993, the Antitrust Division filed a total of 102 criminal cases. The FBI assisted Division attorneys with the investigation and prosecution of 75 percent of these cases. Additionally, the FBI is assisting the Division in approximately 75 percent of its current, ongoing grand jury investigations.

o The Division's Federal and state procurement initiatives provide training and other assistance to Federal, state and local procurement officials. FBI agents and Assistant United States Attorneys on how to detect, report, and investigate suspected anticompetitive contracting activities. The program has been well received by Federal investigation agencies, state attorneys general, and procurement officials. These cooperative efforts have been invaluable in cases such as our school and military milk contract bid rigging.

ANTITRUST DIVISION POLYPROPYLENE BAG CONTRACTS

- o The Division's continuing investigations, with assistance from the U.S. Department of Agriculture's Inspector General, into bid rigging and related violations in polypropylene bag contracts resulted on September 25, 1995, in charges against the Fulton-Quinn Company with "relaxing the USDA while bidding on contracts to supply bags to ship grain to needy countries. The company was charged with conspiring to submit false certificates of product origin on bids for polypropylene bag contracts.
- o The Division and the attorney general of several states have examined bid rigging in school and military milk contracts in the United States. These investigations have resulted in the filing of 132 criminal cases against 79 corporations and 84 individuals. Five milk grand jury investigations are now active in four states.
- o The filing of two criminal cases in the forestry industry is in part the result of excellent work by the Department of Agriculture Inspector General's Office in securing a search warrant and in assisting throughout the investigation in gathering information and evidence.

B. CIVIL ENFORCEMENT

Support of the Antitrust Division's non-merger civil enforcement program as pursued under Section 1 of the Sherman Act is a priority. The perception and reality among consumers and entrepreneurs that the antitrust laws will be enforced fully and fairly is critical to the economic freedom of all Americans. Vigorous competition is also critical to ensure the rapid innovation that generates continued advances in our standard of living and our competitiveness in world markets.

The Division has filed a number of major civil enforcement actions, and has undertaken a very large number of new civil investigations. In 1995, for example, the Division filed 15 consent decrees (the largest number in 15 years) to stop anti-competitive practices through civil remedies. In 1994, the Division filed 12 consent decrees and four 7A decrees for a total of 16, excluding mergers. The resource requirements necessary to sustain this effort are great. More staffs are desperately needed to handle additional additional antitrust litigation from the 1990s.

1. "Zink-Zink" industries

Technology is rapidly changing, and new markets are emerging almost daily. It is critical that the Antitrust Division have the resources with which to keep up with the change and operate responsibly to ensure that competition in the market is protected and there is maximum opportunity for new entry. Markets must remain free to innovate and work cooperatively within the law to advance technological change. The Division has several ongoing investigations of possible anticompetitive conduct in high-technology industries. These investigations require the legal and economic staffs to acquire specialized expertise and on occasion require assistance from outside consultants and experts. Effective antitrust enforcement in this area is essential to the nation's continued world leadership, as it ensures that markets remain open to technological advances.

In addition to the ongoing investigations, the Division recently settled a case with IBM, U.S.S. IBM - A motion was made to terminate the January 25, 1994, IBM consent decree. On July 2, 1994, the parties reached an agreement in settlement of the remainder of IBM's Motion to Terminate. Generally, the decree applied to the operation of IBM's computer services business and the sale, leasing and maintenance of all IBM's computers, including personal computers, workstation computers, midrange computers, and mainframe computers. Public comments on the proposed settlement were accepted through October 14, 1994. On November 15, 1994, the Division filed a joint motion to modify the IBM consent decree. A decision on the proposed settlement, which is the violation of the Division's provisions, is expected by the end of the year 2001, is outstanding.

2. Securities

In 1995 the Division and the SEC announced that Bearstern Management Company, Inc. and Cramer Corporation, two of the country's leading investment fund managers, agreed to pay \$25 million in settlements and securities charges. This was in addition to the just announced SEC settlement with Solomon Brothers, Inc. in 1992 that resulted in a \$200 million settlement. The Division is reaching similarly for additional violations.

After conducting a major investigation of practices on the NASDAQ exchange involving a number of leading Wall Street firms, on July 17, 1994, the Division filed a civil lawsuit and settlement in the U.S. District Court in New York City. The lawsuit alleged that several leading Wall Street firms, including Bearstern Management Company, Inc. and Cramer Corporation, had conspired to manipulate the market for NASDAQ-listed securities, which buy and sell stocks in the leading public, were charged with manipulating competition on Nasdaq by buying the "pennies" (the difference between price questions for buying and selling stocks) on certain stocks artificially wide, and thus improving their profits while raising investors' transaction costs. Some of Nasdaq's most frequently traded stocks were affected. The Division found that traders entered the trading convention by placing, hearing telephone calls to those who posted odd eight quotes, by trading around or refusing to deal with violations of the convention, and by other manipulative actions. The proposed settlement prohibits market makers from agreeing with each other to adhere to the quoting convention or from agreeing to fix, raise, lower, or maintain prices or quotes for Nasdaq-listed securities. The proposed settlement also requires the firms to sign and review a combined total of approximately 40,000 hours of trader conversations annually. The proposed settlement also allows representatives of the Antitrust Division, without prearrangement, to appear at the firm's office to listen in on trader conversations as the act occurs. Violation of the order subjects the

ANTITRUST DIVISION SOURCES AND EXPOSURE

market relations is published by old editor critical coverage as appropriate. The Division has designated an attorney to serve as the Division's principal Nadeau compliance officer and has established a telephone hotline to receive complaints about Nadeau or any other subject. The Judge for this case has recently requested additional briefing on one provision of the decree, and oral argument is scheduled for January, 1987.

3. Communications/Media

On February 8, 1986, the President signed into law the Telecommunications Act of 1996. The telecommunications sector has required considerable attention by the Division in the past as part of the enforcement and administration of the ATAT decree. With the new 1996 Act, both the Division's merger and civil non-merger workload in the telecommunications area is increasing. The new Act is fostering a number of new arrangements and alliances between telecommunications companies, such as the announced plans of BellSouth, Pacific Telesis and SBC to jointly purchase long distance services and decisions between long distance providers, AT&T and Sprint, to jointly purchase local telephone services. The new Act also encourages the formation of new alliances between telecommunications companies and other industries. The Division is currently reviewing the impact of the new Act on the ATAT decree and is working to ensure that the Division's enforcement efforts are not in the public interest. The impact of these new arrangements and alliances on the ATAT decree is being monitored closely by the Division and will be a major focus of the Division's enforcement efforts in the future.

Several matters currently are being investigated as possible violations of Section 1 of the Sherman Act. For example, the Division is looking at five major music companies that are forming a series of joint ventures to distribute music. The Division is also looking at a proposed joint venture between the Sony Corporation of Japan, Thorn EMI of Britain, Program Holding N.V. of the Netherlands and Bertelsmann Music Group of Germany. Together, the five music recording businesses. With their combined revenues of nearly \$9 billion, they have about 80 percent of the \$11 billion recording market world wide. Time Warner Music alone has sales of \$3.3 billion. Substantial resources are required with which to pursue the investigation which serves as only one example of what will be necessary as the television and entertainment industry changes in response to market pressures.

The Division recently made its first challenge to the use of a joint sales agreement ("JSA") between two firms in the radio industry. Under the JSA, one of the firm's radio stations priced and sold all radio advertising time for one of the second firm's radio stations, while the second firm's station paid a monthly lump sum, in return. The JSA thus gave one firm's station complete control over the sale of the inventory of the other competitor -- the second firm's station -- without integrating the management of operations of the two stations. The Division believes that such an agreement, which eliminated independent pricing, was anticompetitive and without any redeeming procompetitive effects. As part of this investigation, the Division is looking at the impact of the JSA on the radio station owner, termination of the JSA was required and has recently been effected. The Division is looking at the practice of a number of in-state and out-of-state radio stations and anticipates additional workloads related to JSA's.

On February 8, 1986, the Division filed an antitrust suit and proposed consent decree in U.S. District Court for Corpus Christi, Texas, against three Corpus Christi broadcast television network affiliates. The complaint alleged that the three broadcasters unlawfully agreed to practices that increased the cost to cable television operators for the right to transmit the broadcasts, programming the proposed consent decree would remedy. The Division is currently reviewing the impact of the proposed consent decree on the ATAT decree and is working to ensure that the Division's enforcement efforts are not in the public interest. The impact of these new arrangements and alliances on the ATAT decree is being monitored closely by the Division and will be a major focus of the Division's enforcement efforts in the future.

4. Health Care

A major concern of the Division is investigating suspected antitrust law violations by companies in the health care industry. Recent cases and investigations have involved a wide variety of health care matters affecting all 50 states. The Division presently is investigating a significant number of cases involving health care providers, many focusing on exclusionary conduct by competing doctors and hospitals to eliminate competition from managed care plans. The type of investigation is expected to increase as health care providers are placed under closer scrutiny by consumers and consumer organizations. The Division also devoted significant resources to informing affected businesses in the health care sector about the Division's enforcement policies. Of particular importance is the Division's investigation of the proposed joint venture between the two largest health care providers in the United States, the Kaiser Permanente Health Plan and the University of California Health Plan. The Division is currently reviewing the impact of the proposed joint venture on the ATAT decree and is working to ensure that the Division's enforcement efforts are not in the public interest. The impact of these new arrangements and alliances on the ATAT decree is being monitored closely by the Division and will be a major focus of the Division's enforcement efforts in the future.

The Division is currently reviewing the impact of the proposed joint venture on the ATAT decree and is working to ensure that the Division's enforcement efforts are not in the public interest. The impact of these new arrangements and alliances on the ATAT decree is being monitored closely by the Division and will be a major focus of the Division's enforcement efforts in the future.

In addition to the many on-going investigations not yet public, health care accomplishments include

- (a) Danbury, Connecticut Hospital and Providence Capital. The Division, with the Connecticut Attorney General's Office, challenged antitrust violations by Danbury Hospital, the Danbury Area IPA (a physician organization) and Healthcare Partners, Inc. (a physician hospital organization) formed and owned by the hospital and the IPA. Danbury Hospital is the only hospital in the Danbury, Connecticut area, and

ANTITRUST DIVISION EXPENSE CASES SUMMARY

American business community and American consumers. The investigation and settlement of the Airline Tariff Publishing Company (ATP) demonstrates the amount of negative effort that can be required. The amount of effort is not unusual for a large antitrust investigation. For example:

In *United States v. Airline Tariff Publishing Company et al.* (D.D.C.), the Government contended that the eight largest U.S. airlines (American, United, Delta, Northwest, USAir, Continental, TWA, and Alaska) conspired to restrain trade and fix rates of return on investment. The case was settled in 1992. The settlement was estimated at more than \$1 billion between 1988 and 1992. The case, as with others that produce major economic impact, required a major economic impact. A failure to commit the necessary resources produced investigations, creative inefficiencies, and deprived consumers and businesses of prompt relief from anticompetitive practices. As a result, the economic benefits of full staffing of these antitrust cases far exceed the modest budgeting costs required.

The investigation that led to this important case and settlement began over 3 years before the complaint was filed, and almost 4 1/2 years before the case was finally settled. The delay was attributable almost entirely to inadequate staffing. Four lawyers, who worked on the matter on a part time basis, were responsible for

- Reviewing 700,000 pages of documents produced by the Airlines;

- Reviewing 200,000 pages of documents produced by third parties;

- Conducting 52 lengthy interviews;

- Conducting 44 depositions; and

- Sorting and reviewing hundreds of thousands of airline fare records.

Not until the complaint was filed was the staff increased to 7 full-time attorneys. Two full-time and several part-time economists, along with 3 research assistants, and 3 paralegals also worked on the case. However, staffing was only dedicated to this case as the result of a major shift from other investigations, including *United States v. Microsoft*.

The enlarged staff made it possible to prepare the case for trial. Among other things, the preparation required a 640 page response to defendants' initial interrogatories and request for admissions, the review of another 300 boxes of documents submitted by defendants, and the serving of 2700 interrogatories and 640 requests for admissions on the several defendants.

In all 22,000 hours of attorney time, 8,750 hours of economist time, and 8,000 hours of paralegal time were devoted to this massive and complex case. Had the case ultimately not been so well prepared, and that had not settled, additional months of trial time would have been required. On the other hand, had adequately more resources been available to devote to this case, it could have been brought and settled much more quickly, and the 4 1/2 years that transpired, all to the benefit of consumers, and the more efficient use of the government's resources.

7. Other On-going Civil Antitrust Investigations with Broad Consumer Impact

The Division has filed a number of major civil enforcement actions, and has undertaken a very large number of new civil investigations. In order to move these cases rapidly and address new matters being discovered, it is necessary to enhance Division staffing.

Microsoft Corporation -- The Division is investigating a number of issues related to several aspects of Microsoft's business.

General Electric Licensing -- On August 1, 1998, the Division filed a civil lawsuit in the U.S. District Court in Montana, alleging that restrictions in the licensing contracts GE has negotiated for use of software in its industrial machinery have restrained trade and fixed prices. GE has been accused of using its market power to force licensees to use GE software. For example, GE has been accused of requiring licensees to use GE software for its industrial machinery, even though the GE software had no applicability to the other brand of industrial equipment. GE filed a Motion to Dismiss on October 1, 1998. The Motion has been fully briefed and oral argument is scheduled for February 14, 1999.

CRS -- American Airlines, owner of Sabre, the largest computerized airline reservation system (CRS) in the U.S., has complained that it is being unfairly excluded from certain European countries by Amadeus, a French-owned airline reservation system. Amadeus has been accused of using its market power to prevent American Airlines from competing in Europe. American Airlines has been unable to penetrate these markets because the airlines that own Amadeus will not provide Sabre with complete flight data and selling capability for their flights.

ANTITRUST DIVISION Activities and Expenses

Real Estate Holdings - The Division investigated allegations that the two largest real estate holding companies in the nation, Vitco Management, Inc. and Branning-Evans Industries, Inc., were selling long-term contracts and proposed consent decrees which imposed a large market share on the other (or both) of the companies. On February 15, 1988, the Division filed complaints and proposed consent decrees which imposed a large market share on the other (or both) of the companies. The consent decrees in both cases were entered on May 22, 1988.

Real Estate Holdings - This involves a complex vertical restraint investigation of Vitco, which manufactures approximately 70% of the demand sold in the U.S. The Division is investigating whether Vitco's marketing and distribution contracts with its independent distributors to exclude a new entrant into the U.S. market, in violation of section 1 and/or 2 of the Sherman Act. A recommendation is expected shortly.

Online Legal Research Services - The Division is investigating alleged anticompetitive conduct in the computer assisted legal research market by West Publishing Company. The Division is recommending remedial provisions to the American Association of Law Libraries and, more recently, the American Bar Association, to develop a uniform public domain citation standard. The Division has also recommended that the Department publicly endorse creation of electronic bulletin boards for each federal and state court through which all publishers and the general public may access new opinions and any subsequent corrections simultaneously. Finally, the Division is participating as *amicus* in private cases concerning the protection of page numbers in standard case reports.

Stimwell, Oklahoma's Utility Services Provider - On April 25, 1988, the Antitrust Division filed a suit in the Eastern District of Oklahoma challenging the electric sales practices of the City of Stimwell, Oklahoma. The complaint alleged that Stimwell refuses to provide water and sewer services to residents unless they also buy their electric service from the city. This "all-or-none" utility policy deprives consumers of their right to choose among competing electric suppliers, denying consumers the benefits of price and service competition. The complaint seeks to enjoin permanently the practice, which had been suspended, although not formally rescinded, after initiation of our investigation. The case is in litigation.

American Bar Association Dispute - The Division filed a civil lawsuit and settlement in U.S. District Court in Washington, D.C. alleging that the American Bar Association had used its power as the law school accrediting agency to advance law faculties' economic interests and working conditions. The proposed settlement prohibits the ABA from using faculty salaries, refusing to accredit schools simply because they are for-profit, and refusing to allow ABA-approved law schools to accept credits for schools simply because they are state-sponsored. More importantly, it also opens the ABA accreditation process to scrutiny from the public and from within the ABA, to guard against members of the public or faculty from being unfairly treated by the ABA. The suit is currently in litigation. The Division is also participating as *amicus* in a federal public hearing, the Judge entered the proposed consent judgment. Amicus MSB, sought injunctive relief for deposit purposes, the suit denied, and MSB, has since appealed. No action has been taken on that appeal. MSB's own case has since been thrown out. The Division filed an *amicus* brief, and oral argument was heard on December 10, 1988.

Louisiana Title Investigations - On June 28, 1988, the Division filed a civil suit against American National Gas Company (ANG) and (ANG) Machine AG (MAG), the leading producers of longpipe tubes and the settlement used to make these tubes. The suit is to break up their exclusive agreement not to compete with each other for business in North America. The Division filed a proposed consent decree with the suit that would settle the suit by terminating the agreement between the two companies and allowing MAG, a Swiss firm, to re-enter the North American market.

VISA/MasterCard Investigations - The Division is investigating whether rules adopted by VISA and MasterCard that prohibit their member banks in the U.S. from issuing credit cards to competitors, credit card holders, and credit card issuers, are anticompetitive. The Division is also investigating whether the rules of VISA and MasterCard member banks to the detriment of consumers, and whether they diminish the ability of American Express and Discover to remain vigorous competitors of the VISA and MasterCard networks.

RECOMMENDED INCREASE:

An increase of 13 positions (includes seven attorneys), seven workyears and \$1,177,000 is requested as a workload-related program adjustment for the Termination and Preservation of Program in 1988.

THE REQUESTED INCREASE IS NEEDED BASED ON THE FOLLOWING:

- o Critical workload under the Cartel Program is becoming more intensive. Current and projected investigations continue at a high level in federal procurement matters. We are receiving new allegations at an increasing rate as a result of the Division's corporate and individual amnesty policies. Referrals from U.S. Attorney offices and the FBI are increasing as a result of the Division's Quality Criminal Cases Initiative.
- o Civil workload under the Division Cartel Program in 1988 and 1989 has increased and is expected to continue to do so for years to come, particularly in areas such as monopolization, other large cases, similar to the ATTP investigation involving collusion, and those involving national and international business conduct.
- o The criminal and civil matters that are being pursued under the Cartel Program are more complex, involving a wider range of investigative issues, including international discovery and changes in statutes and regulatory structure. Additionally, the record in matters being investigated is much larger and more detailed. The current load and need for additional investigation is typical of this trend. It is international in scope, involves important issues and products and is highly publicized. Approximately half of the Division's ongoing international investigations involve criminal matters.

NOISE AND VIBRATION

- The number of criminal antitrust cases involving international issues, which require more discovery, analytics and more effort, is increasing. Between 1994 and 1995, the number of criminal antitrust cases involving international issues increased substantially, with additional resources required through 1998. Because of our increased emphasis on cases with major national and international implications and the increasing size and complexity of these matters, the Division will require additional staffing in 1998. The criminal cases filed in 1995, 1996, and to date in 1997 are against foreign companies. Increasingly, however, international implications, and involve more overall dollars of commerce than ever before, with more resulting in higher fines and international impact per dollar of Division expenditure. The Division has 83 grand jury cases currently ongoing. Almost all deal with major price fixing or bid rigging. Over 40 percent of the cases are national and international investigations involving dozens of dollars of commerce.
- The Antitrust Division is conducting simultaneous probes of several business entities that have the ability to set prices and restrict markets. Prime targets for scrutiny are price fixing cartels that operate around the world and in connection with U.S. companies. The Division is conducting about half a dozen separate investigations of suspected overseas price fixing and market allocation in highly concentrated industries. We suspect substantial abuse is occurring where there is a worldwide market and a small number of producers, but the differences between price fixing and market allocation are not always clear. One case involves the U.S. steel industry, which has been the subject of substantial federal and state investigations for decades. Other potential benefits to American companies and to world markets are significant and increasing, but these international matters are very resource intensive. The food and feed additives, for paper, and other investigations referenced earlier in this text underline the need for additional resources in this area.
- The Division's Corporate Amnesty Program has processed the number of companies that have come forward from an average of one per year from 1979, 1980, to 23 applications over the past 14 months. When combined with the Division's Individual Amnesty Policy announced in August 1994, these expanded amnesty programs are encouraging major new compliance and result in a significant net increase in prosecutions. While this "self identification" saves the Division some of the work necessary to identify and prosecute violations, it is also resulting in an increase in the work coming to the Division, with a net result that we need additional resources with which to prosecute the other culpable companies and individuals identified by these companies and individuals who have come forward and acknowledged wrongdoing.
- Federal Government procurement programs and the Division's ongoing probe of price fixing and bid rigging in major industries continue to occupy a significant part of the Division's staff. Of the Division's current 83 grand jury investigations, 25 percent are focused on Federal, state and local government procurement affairs.
- To the Division has initiated a project to identify, inventory, and record existing antitrust programs across organizations, including at Department of Defense contractors. Under these arrangements, companies that have been identified and exempted are required to file a report to DOJ about the content of an antitrust compliance program. Typically these involve highly complex, engineered products for which substantial research and development is performed, and they often involve classified programs. We expect this project may result in a number of highly visible antitrust cases, some of which have national security aspects, and involve national firms and large amounts of public money.
- The Division has filed a number of major civil enforcement actions, and has undertaken a very large number of order to pursue them to the benefit of the American consumer.
- Below list, and others being identified by the Division, will require additional resources in order to pursue them to the benefit of the American consumer.
- The economic benefits to consumers and U.S. businesses as a result of the Division's actions are substantial, with the following matters serving only as examples of the wide range of matters being pursued by the Division:
- As a result of the Microsoft licensing practices investigation, retail operating systems will have a fair chance to compete in the high technology market, innovation will be spurred, consumer choice enhanced, and the price of personal computers lowered
 - The Division's settlement in the Airline Tariff Publishing case, which involved eight major airlines, ended a practice by the airlines which cost consumers more than \$1 billion between 1988 and 1992.
 - After a two year combined effort between the United States and Canadian antitrust investigators, a \$120 million a year international cartel in the fax paper market was broken up. In addition to collecting fines of more than \$6 million, the investigation ended a practice that raised terms for paper prices by approximately 10 percent, a cost absorbed primarily by small businesses and home fax users.
 - In an investigation of anticompetitive learning arrangements between contractors bidding on Department of Defense procurements, the Division won a settlement including a payment of a \$4 million fine and a reduction in the contract price of approximately \$80 million to the benefit of DoD and the American public.
- These cases, as with others that produce major economic impact, require a tremendous resource commitment. A failure to commit the necessary resources preclude investigations, create inefficiencies, and deprive consumers and businesses of prompt relief from anticompetitive practices. As a result, the economic benefits of full staffing of these antitrust cases far exceed the modest budgeting costs required to prosecute these cases.
- It is essential to consumer and business welfare that antitrust vigilance be maintained at the Federal level. The United States' domestic market is increasingly intertwined with the global economy, and American companies are competing in a global market. Vigorous competition is also critical to assure the economic freedom of all Americans. Vigorous competition is also critical to assure the rapid innovation that generates continued advances in our standard of living. The Division has filed a number of major civil enforcement actions, and has undertaken a large number of order to pursue them to the benefit of the American consumer.
- Increased antitrust scrutiny absolutely critical.
- 10 Pursuit of the Antitrust Division's non-merger civil enforcement program under Section 1 of the Sherman Act is a priority. The penetration and reality among consumers and entrepreneurs that open and vigorous competition is essential to the economic freedom of all Americans. Vigorous competition is also critical to assure the economic freedom of all Americans. Vigorous competition is also critical to assure the rapid innovation that generates continued advances in our standard of living. The Division has filed a number of major civil enforcement actions, and has undertaken a large number of order to pursue them to the benefit of the American consumer.

**ANTITRUST DIVISION
Policies and Procedures**

- o Health care markets examined by the Division are increasing with the reexamination of the health care system in the United States by consumers, the Congress and the Administration. The Division currently is conducting an ongoing study of the health care market in the United States and is conducting an ongoing study of the health care market in the United States. The Division is currently conducting an ongoing study of the health care market in the United States and is conducting an ongoing study of the health care market in the United States. The Division is currently conducting an ongoing study of the health care market in the United States and is conducting an ongoing study of the health care market in the United States.
- o With issuance of a joint document by the Federal Trade Commission and the Antitrust Division entitled "Statements of Antitrust Enforcement Policy in the Health Care Area," and at the urging of the Administration and the Congress, the Division has committed to handle all health care business reviews within 90 days after receiving all necessary information. Since this commitment was made, the Division has received a substantial number of requests for health care business reviews. It is anticipated that the number of requests will substantially increase well beyond the current level.
- o In the telecommunication area, an economic sector in which are anticompetitive additional anticompetitive matters affecting cable companies, TV networks, publishers and phone companies as well as to CD technology are busy businesses and technologies in which we will see investigatory interest in the next few years.

Preservation of Competitive Market Structure

[illegible][illegible]

The Preservation of Composite Market Structure activity has base resources totaling 448 positions (including 215 attorneys), 441 workyears, and \$47,928,000.

A. METHODS

[illegible]

1. Department of Museum Activities

[illegible]

Not only is the number of H&M Works that must be reviewed by Division staff increasing, but also the work associated with the review of each proposed merger within the last fully mandated 30-day period is increasing. The workload of Division staff has increased significantly since 1986, as shown in Exhibit 7. This increase in workload is due to the fact that the number of mergers per year rose from 400 hours per merger in 1986 to over 800 hours per merger in 1989. This dramatic increase in the effort that Division staff must expend to the initial economic investigation effort combined with the increasing number of proposed mergers, requires that the Division's critical need for additional personnel.

ANTITRUST DIVISION
Federal Trade Commission

Value of U.S. Merger Activity

Source: Securities Data (reported in U.S. Today, August 15, 1998 and Morgan &大通, January 8, 1997)

Item	1994	1995	1996	1997	1998	Change	Estimate
Total Premerger Filings	4,400	5,416	6,001	6,201	5,201	250	6,401
Total Premerger Transactions	2,301	2,716	3,004	3,004	3,004	0	3,004
Challengable (Hart-Scott-Rodino) Filings	2,148	2,616	2,879	3,002	3,002	48	3,111

In addition to increases in premerger filings and total investigations filed, the number of investigations concluded also has increased. The number of merger investigations increased 77 percent from 158 in 1995 to 277 in 1998. Additional increases are also seen in the number of investigations filed. The increased number of investigations has led to more challenges. In 1995 we challenged 18 transactions. Of the transactions brought in 1998, 16 of them were successfully resolved (by consent decree or by the parties' abandoning or reworking the transactions). Two are still in litigation. In 1998, due broadly to the increased complexity of the investigations pursued, the Division challenged 30 proposed mergers and successfully resolved all but one.

2. Telecommunications Museum

[illegible][illegible]

ATAT-MCCM

[illegible][illegible]

The subsequent BT-46C transaction, announced in November, 1988, at \$20.28 a share that would constitute the biggest foreign purchase ever of a U.S. company, and would create the world's first largest telecommunications company.

Again the issues are complex, and in addition to Deloitte review the transaction involves review on the part of the FCC (not in U.S.), in light of the foreign ownership rules, and regulators in the United Kingdom, in light of the local ownership rules, and regulators in the Netherlands, in light of the local ownership rules, and regulators in the United States, in light of the local ownership rules.

2. Background and Aims

In addition, we recently have advised transactions that take the same issues but with other countries. Such has an agreement with Deutsche Telekom AG, which the Division investigated thoroughly, challenged and settled with a consent decree, and AT&T has an agreement with British Telecom companies. As a result, we are not likely to be asked to litigate the same issues and we will be asked to litigate the same issues in a number of countries. A highly innovative and creative effort to providing the interests of American consumers, and a major priority of the Administration in protecting against abusive telecommunications practices by U.S. firms. The proposed transaction is a significant step in the development of the telecommunications industry in both the United States and world-wide region in order to advance technology in the time and order to remain competitive.

1. Research Method

This series of 13 transactions involved the nationwide consolidation of all the available radio spectrum allocated for mobile radio. Three companies purchased that spectrum, which is now used for dispatch services, to offer mobile telephone service. The transactions raised the question of whether that consolidation would harm consumers of special mobile radio services and required the staff to develop a complete understanding of special mobile radio technology and competition in numerous metropolitan areas across the country.

This investigation involved 28 second requests, 143 interviews, 22 depositions, and the review of 910 boxes of documents that were submitted. There were ten staff members—five attorneys, three paralegals and two non-attorneys—assigned to this matter. As the direct result of the work directed to the matter by the Division, it was settled to the benefit of all parties, though in accordance with the terms of the final judgment—negotiations continue on the “hot-off” of associated firms.

A. Westhousen Electric-Industry Broadcasting

the 1998 Telecommunications Act, the Division received a settlement with Westinghouse Electric and Infinity Broadcasting to form the nation's largest radio group. The new group, which will operate 77 stations in 13 major markets, was required to discontinue the sale of the stations to form the new radio group. The new group, which will operate 77 stations in 13 major markets, was required to discontinue the sale of the stations to form the new radio group. The new group, which will operate 77 stations in 13 major markets, was required to discontinue the sale of the stations to form the new radio group.

Department of Zoology

In addition to an ever-increasing number of mergers that the Division must review, the nature of the mergers is seeing require more resources with which to conduct reviews that are comprehensive and serve to protect American businesses and consumers, while concurrently moving quickly so as to not inappropriately delay the proposed transactions. The Division is heavily involved in complex merger litigation. Recently, the Division has committed resources to the following matters:

1. **Differential hospitalities.**—This Division challenge involved the merger of two hospitals in Dubuque, Iowa, a case that went to trial on September 26, 1984. Like the other merger discussed, this one was based on unrefined pre-complaint investigation. The complaint, 7774-viewers were contacted, 18 depositions (all video tapes) were taken, and 78 books (152,000 pages) were reviewed. Four attorneys, two economists and three pathologists conducted the investigation. On October 27, 1986, the court ruled in favor of the Division's request for a full-scale economic study. The Division's report on most market product markets, discussed the effect of the merger on non-patients.

To prepare for Mid, 17 more departments were taken (15 by the telecommunications) and the staff was bolstered to nine attorneys, three economists and three publicists. Additional resources were directed to the research and analysis group, which was given the task of identifying and evaluating the economic and social impacts of the various policy options. The research group was also charged with identifying the key issues for the public and the media, and with developing a strategy for addressing them. The research group was also charged with identifying the key issues for the public and the media, and with developing a strategy for addressing them. The research group was also charged with identifying the key issues for the public and the media, and with developing a strategy for addressing them.

19. *Atlantic Coast Line Railroad v. Chesapeake Inc.*, On August 5, 1994, the Division filed its first major challenge under the passage of the Transportation Reform Act of 1990. Two of the nation's largest railroads, *Atlantic Coast Line Railroad* and *Chesapeake Inc.*, were required to shunt a key radio station, WQOW-TV, in Chrontal from being permitted to proceed with the sale of WQOW-TV 1970-1979 radio station. Without the divestiture, the companies would lose the market for the sale of radio advertising time in Chrontal and the surrounding areas.

HOW TO HARBOR?

[illegible]

4. Data analysis – The Division's investigation of the Thomson Corps' \$3.4 billion acquisition of Significant Publishing Inc., a Westcoast publisher, revealed that the Thomson agency agreed to discount most fees upon publication. The Division's investigation of the Thomson Corp.'s \$1.4 billion acquisition of Significant Publishing Inc. revealed that the Thomson agency agreed to discount most fees upon publication. The Division's investigation of the Thomson Corp.'s \$1.4 billion acquisition of Significant Publishing Inc. revealed that the Thomson agency agreed to discount most fees upon publication. The Division's investigation of the Thomson Corp.'s \$1.4 billion acquisition of Significant Publishing Inc. revealed that the Thomson agency agreed to discount most fees upon publication.

[illegible]

(4) **Disney/ABC** - When it was announced, this transaction was the second largest valued merger of all time. Disney's \$18 billion acquisition of ABC has now been approved, based in part on Disney's intent to sell its Los Angeles television station. Disney agreed to the consent decree which would be filed only if certain conditions occur.

[illegible]

On January 29, 1988, the Division approved Pacific Scientific's Company's acquisition of Uni One Inc. after Pacific Scientifics agreed to several provisions. Pacific Scientifics agreed to pay Uni One's employees the same salary and benefits as they would have received had they remained with Uni One. Pacific Scientifics also agreed to fund Uni One's pension plan for the period of the transition. Pacific Scientifics also agreed to fund Uni One's pension plan for the period of the transition. Pacific Scientifics also agreed to fund Uni One's pension plan for the period of the transition.

Grainco-Pacific Corn Company, Inc., 10000 Pacific Coast Highway, Suite 1117, Newport Beach, CA 92660, is the U.S. agent for the Canadian company, **Grainco**, Ltd., 10000 Pacific Coast Highway, Suite 1117, Newport Beach, CA 92660. Grainco is a Canadian company that has U.S. based plants and operates in the U.S. and Canada. Grainco's products are used in a wide range of commercial buildings and remodeling. This investigation has been conducted pursuant to a request from the U.S. Coast Guard.

(119) A civil antitrust suit and proposed settlement were filed on August 13, 1998, in U.S. District Court in Washington, D.C., against Foodmaster Inc. for violating Hart-Scott-Rodino notification requirements. The court approved the settlement and Foodmaster Inc. paid the \$1.46 million penalty.

(111) A self-withdraw suit and proposed settlement were filed on February 4, 1999, in U.S. District Court in Washington, D.C., against *Barn Lee Corporation* for violating Hart-Scott-Rodino notification requirements. *Barn Lee* has paid \$3.1 million, the largest civil penalty any company has ever paid for violating antitrust premerger requirements. The proposed suit and decree was approved by the court.

119. The capital paying industry, in which **Investment Fund Corp.** took cash under offer, valued at more than \$1 billion, to buy **Chen Eastman Chemicals** was approved after **Investment Fund** agreed to sell its capital paying business to the firm, which is a public company. The transaction, as structured, will enable its subsidiaries to compete in the market for the construction and maintenance of highways, tunnels, bridges and other capital projects. The company is a public company with a market value of approximately \$120 million as now.

¹¹⁸ The bidding industry in which the Division challenged a proposed merger between the *major* public and *Confidential* bidders commencing with annual revenues of \$1.9 billion and \$1.1 billion respectively, the proposed merger by the largest and third largest wholesale bidders was approved following the filing of a consent and settlement agreement in the U.S. District Court in Chicago. The court

The investigation that led to this important case and settlement began in April 1989, almost 5 years before the case ultimately was brought. The delay was attributable almost entirely to inadequate staffing. Until September of 1993, only 3 attorneys, who worked on this matter on a part time basis, negotiated for and gradually reviewed some of the 1,250,000 pages of documents produced by the Union and third parties. In September 1993, the staff was increased to 8 full time attorneys and 7 full time paralegals.

PROBATION DEPARTMENT

[illegible]

The Microsoft Case. On July 15, 1994, the Division settled United States v. Microsoft (U.D.C.). Microsoft, the world's largest and dominant computer software company, used exclusionary contracts to choke off access to personal computer manufacturers by competing operating systems and pervasive proprietary systems. In February, 1994, the judge refused to approve the consent decree. On June 18, 1995, the District of Columbia Court of Appeals (reversed and remanded) sent the chief judge of the District Court with instructions that it be assigned to another District Court judge and an order be entered suspending the decree. The decree ultimately was entered by Judge Jackson on August 21, 1995.

Implementation of the case of use in Microsoft's selected practices and proposed restrictions on Microsoft to prevent it from engaging in the future in exclusionary practices designed to produce the same benefits for some users as for some others. As a consequence of the selected, third-party practices and proposed restrictions on Microsoft, the benefits of the selected, third-party practices and proposed restrictions on Microsoft are expected to be realized, consistent with the stated purpose of the selected, third-party practices and proposed restrictions on Microsoft. In the course of less than one year, a tremendous amount of information was gathered and analyzed in a highly comprehensive, complete and carefully researched, and a somewhat diverse and negotiated

[illegible]

This massive civil enforcement effort employed a large staff of lawyers, economists, and paralegals. A core of 14 full-time staff lawyers, 4 full-time staff economists, and 18 full-time paralegals, all of whom worked long hours, were required in order to complete this matter in less than a year.

Only when the appropriate resources are devoted to investigating and prosecuting major civil antitrust actions can the Division maintain competition and innovation in our important high technology industries, as well as the confidence of consumers and businessmen in the fairness of our economic system.

In 1998, Microsoft was notified by the Division that investigations had begun into additional areas of alleged anticompetitive conduct and we requested additional documents from the company through Civil Investigative Demands.

2. Adornment Enforcement

The Division has substantial responsibilities in the enforcement of consent decrees against BMI and The American Society of Composers, Authors and Publishers (ASCAP) / Broadcast Music Incorporated (BMI).

10/2/01

The Division recently reached an agreement with IBM to sunset its 1966 consent decree in stages over the next five years. A major investigation was required in order for the Division to make the appropriate disposition of the decree, and five attorneys and seven paralegals worked on this matter full time for over a year. Currently, the largest judgement enforcement matter involves the massive disbursement of millions of dollars in commercial and consumer products to various organizations and individuals who have been convicted of criminal offenses. The Division continues to receive numerous complaints about the actions of these individuals, and the Division is required to conduct extensive research prior to prosecution. More significantly, the Division is considering whether change in technology and market positions warrant a complete overhaul of these decrees.

3. Job's Production, Research and Development Ventures

in accordance with the National Cooperative Research and Production Act Amendments of 1983 (NCRPA), persons engaged in joint ventures for research, development, and production are provided the opportunity to reduce their potential liability under the antitrust laws by filing a declaration with the Federal Trade Commission (FTC) and the Department of Justice (DOJ). As required by section 4(b) of the NCRPA, annual recertification of the joint venture is required. For the first year under the 1983 Amendments, a total of 86 new ventures filed for the production of the NCRPA. Of these ventures, 57 provided research and development only, while 8 provided joint production only. In addition to joint research and development ventures, supplementary notices

ventures filed by 64 existing ventures to update the status of their venture filing activities. In total, research from 33 foreign nations participated in joint production ventures that involved technology transfer or licensing agreements during 1985. These numbers doubled, with 121 new venture filings, excluding 106 in research and development alone or in addition to research and development, indicating that more than twice as many countries were now filing joint production ventures. Thirty-two countries were cited by 65 existing ventures and 71 new ventures participating. Joint technology exchange, manufacturing, and production have been addressed in these ventures. Supplementing cutting edge areas involving the use of artificial intelligence, computer hardware and software, chemical technology, manufacturing, and construction. From June 10, 1985 through August 22, 1986, 200 joint filings have been received by the Division—21 involved production ventures and 98 involved research and development. 150 supplemental filings have been received; 147 of which concern research and development and three involved production ventures.

Additional resources will also allow the Division to continue to pursue Project 4 cases. The fact of this increase in more than 10 cases was projected by the Division in April 1984. These cases can have a dramatic effect on the state budget. For example, in the case brought by the Division in April 1984, MUE, the domestic ATM network, was ordered to join the network in competition, providing 2 million additional minutes of service to the state at a cost of less than \$1 million. The state is currently in a position to win more than 13,000 ATM most choices and depositary institutions—particularly rural banks, thrifts and credit unions—in Iowa. On April 25, 1984, the Division filed suit against the city of St. Louis, Missouri, and St. Louis Area Development Authority in the Eastern district of Oklahoma. The Division alleged that the city of St. Louis is trying the provision of water and sewer services to the state of electric power in new suburban developments where it loses competition from rural electric co-ops. This is the third filing complaint filed in this jurisdiction. The St. Louis sewer service is currently in litigation.

The Division has a total of 48 non-merger investigations being pursued, including the following major matters:¹ [C]ivil non-merger investigations were pursued by the Division's Structure and Control Program. The distinction between the two budget program areas was related to the type of charge being considered, with violators of Section 1 of the Sherman Act normally pursued under the Civil Program, and violators of Section 2 of the Sherman Act and Section 7 of the Clayton Act pursued under the Structure Program.² In order adequately to manage matters such as those referenced below, it is critical that the Division receive additional staffing and resources in 1986.

- General Electric (GE).** The Division has filed a lawsuit challenging GE's licensing practices that have reduced competition and driven up prices in markets for medical imaging equipment and in markets for the equipment itself. Medical imaging equipment includes everything from x-ray machines to MRI, and GE's practices have helped drive up the costs of medical care. The case was aggressively litigated on both sides and set forth significant precedents. It raises important questions about the scope of intellectual property protection and may have a significant impact on software patents generally. GE's motion for summary judgment was denied on February 14, 1997.
- Dale DeRuffin.** The Division has filed a lawsuit challenging the use of a "most favored nations" clause that operates to deter any by lower cost insurance plans, and to prevent the purchase of certain products. The District Court recently handed an important decision in the case, and discovery has proceeded for 30 days by mutual consent to permit settlement discussions.
- Veritas Software.** The Division is investigating the past stock transactions, claims publishing their members from prior lawsuits, and the company's financial practices. This is also a major investigation against significant resources.
- IBM.** While the ability of copyright claims to compete in the marketplace is being tested, this is also a major investigation against significant resources.

increase in 1998 of 30 positions (excluding ten attorneys). 15 workyears and \$2,670,000 is requested to address the workload increase for the Preservation of Competitive Market Structure Program. The Division currently has 83 ongoing merger investigations and 48 ongoing civil non-merger investigations. The requested program growth will allow proactive enforcement of the antitrust laws. The additional resources requested will also allow the Division to remain abreast of increasing workload.

[illegible]

- The merger wave has focused on the telecommunications, software, banking and health care industries, areas which are critical to the U.S. economy and in which the Division has taken a lead role in federal antitrust enforcement. Mergers and acquisitions in the information technology industry jumped 7.6 percent in April 1995 reported. "A record \$27.8 billion worth of mergers and acquisitions in the information, communications, and entertainment industries made last year (1994), according to PricewaterhouseCoopers' Paul Mayneck." *The Washington Post*, May 1995 reported. "As

ANTITRUST DIVISION Activities and Expenses

the software business continue to mature, analysts say, companies are rushing to merge to combine resources and bring power." USA Today (May 26, 1996) stated, "the race to build the information highway is creating a flurry of tech mergers."

- o In 1996 the Division analyzed 2,639 HSR complaints filed with mandated 20-day review periods. The number of reviews has been increasing yearly since 1983. The trend is expected to continue, with annual estimates of significant increases through 1998.
- o The number of merger investigations has increased in 1996 - by 77 percent over 1995 - with additional increases projected through 1998. In 1996, the Division challenged 30 proposed mergers and successfully resolved 26. 63 investigations currently are on-going. One measure of the increased relevancy of these investigations is the number of second request letters issued. In all of 1994 there were 74 second requests issued, compared to 80 in 1995. In 1996, there were 133 second requests issued.
- o The complexity of merger analysis is increasing dramatically, as are the numbers of non-merger files that the Division is reviewing that involve international transactions. These international matters require greater expertise in both discovery and analysis. (The average number of such letters in 1996 was 10, compared to 7 in 1995.) The 1962 Horizontal Merger Guidelines require an in-depth analysis of anticompetitive effects resulting from a merger. The Guidelines also contain complete treatment of the issue of entry. These changes reflect current economic learning as well as recent court decisions that require more sophisticated analysis of these issues. Mergers also examinations and data and decisions made consistent, then ever before, requiring the commitment of more resources to such matter.
- o The requested program growth will allow proactive enforcement of the antitrust laws. The additional resources requested will assist substantially in effective antitrust enforcement and allow the program to remain abreast of increasing workload.
- o Civil conspiracy investigations also are increasing at a phenomenal rate. In addition, the Division has seen an increase in the number of civil subpoenas issued, consistent with the increased digital required to pursue these investigations through successful settlement of litigation. In the civil non-merger area, the Division had 53 investigations opened in 1996. Of these 1996 civil investigations, 33 concerned monopolization. These monopolization investigations reflect major increases in the Division's workload because they monopolization investigations are often the most complex and resource demanding matters handled by the Division. As a result of the increased enforcement effort, 10 civil non-merger cases, all settled, were filed by the Division in 1994. In 1995, 15 cases were filed, all of which were settled by consent. In 1996, 20 civil non-merger complaints were filed by the Division, including four that were not settled by consent. Three remain on litigation. The Division won the fourth. The 20 civil non-merger complaints filed in 1996 is a 50.7 percent increase over the 13 cases filed in all of 1995.

I. BASIC PROGRAM DESCRIPTION:

Enforcement of the antitrust laws is difficult and time consuming because a determination as to whether particular conduct or a particular merger is prohibited by those laws can often be made only after careful economic analysis. Errors in antitrust enforcement can have profound consequences for the affected industries and for the public. Thus, economists are a key adjunct to the Division's legal staff. Equally important, antitrust enforcement has become an increasingly important part of the Department's overall economic policy. Moreover, hundreds of legal issues must be considered by the Department each year. Many of these proposals have profound impact on competition and innovation in key industries, as well as the effectiveness and operation of the Department. For example, last legislative session legislation effect the evolution of the entire industry, and have substantially increased the Division's workload in assessing the competitive consequences of new entry into long distance, manufacturing, and video markets. Health care reform proposals effect competition in health care markets. The Division's workload is also increasing due to the need to investigate international cartels and contribute substantially to the enforcement of antitrust laws in other countries. The Division is the Department's sole resource for dealing with such issues and for providing advice and assistance to other departments and agencies. General authority for these programs is found in 26 C.F.R. § 40. The Division works to ensure that its professional staff members remain abreast of evolving legal concepts and judicial interpretation of standing precedent in order to enforce antitrust laws efficiently and effectively.

The Policy Analysis, Legislation and Training activity has base resources totaling 58 positions (including 25 attorneys), 57 workyears, and \$7,057,000.

II. ACCOMPLISHMENTS AND ONGOING WORKLOAD:

A. International Legal Assistance

The Department operates in a world of global markets in which sound competition policy is a cornerstone of a free market economy. The antitrust laws of the United States are a model for competition policy the world over, and the enforcement policy of the Department has been influential in shaping the policies of our trading partners. The Division's workload in this area is expanding rapidly, as evidenced below:

- 1. International Implementation.** The work of the Division is becoming more international in scope as world and domestic markets become increasingly interrelated, and as the Division develops close cooperative relationships with foreign antitrust agencies. A large and growing percentage of the Division's merger, cartel, and monopolization investigations each year involve foreign firms as parties or as third-party witnesses. The number of matters being referred by the Division involving international issues increased by 113 percent between 1993 and 1994, and by 500 percent in 1995 as compared to 1992 (see chart on next page). The Department of Justice works with international agencies with international issues that increased from under 10 percent in 1993 to almost 30 percent in 1995. Significant additional increases are proposed. Moreover, the practice and legal issues involved in these international cases require significantly more attorney time than purely domestic cases.

ANTHONY DOMINICH Issues and Solutions

Between fiscal years 1993 and 1996, the number of matters with international aspects increased by 431 percent.

- New Legislation.** The International Antitrust Enforcement Assistance Act of 1994 (IAEAA), as enacted in November 1994, greatly enhanced the Division's ability to obtain foreign-located antitrust evidence and cooperation from foreign governments. The Division is currently negotiating with several major foreign antitrust agencies. These foreign agencies will, in turn, help to obtain foreign evidence and cooperation from their respective governments. The Division anticipates that new agreements with several major foreign antitrust agencies will be in place by the end of calendar year 1997, with additional agreements in place by the end of 1998.

We anticipate that in the early years of such agreements, we will make many requests for assistance each year to foreign agencies and receive an equivalent number of requests for assistance from those agencies. We further anticipate that making and responding to such requests under the new IAEAA will raise numerous practical and legal issues that will require substantial attorney time over existing requirements. The result, of course, will be that the Division is now able to obtain foreign-located evidence that previously had difficult to obtain, and thus the Division's workload will be able to better international cartel cases that previously could not survive for want of evidence.

% of Grand Juries with International Aspects	16.5%	25.2%	29.8%	38.3%	38.3%	36.3%	61.5%

3. Japan

The Division has been actively supporting the Administration's objective to ensure international barriers to fair and open trade are eliminated. The Japanese antitrust laws are similar to those of the United States, but enforcement of the Antitrust Act, the key antitrust law of Japan, has in the past been sporadic. As a result, there is a perception that price fixing, bid rigging, market allocation and group boycotts occur with some frequency in Japan, and that these practices contribute to the difficulties faced by American companies seeking to penetrate Japanese markets. Talks with the Japanese that have focused heavily on anticompetitive practices by Japanese firms that have hampered the ability of U.S. firms to compete in Japanese markets, and on efforts by the U.S. to obtain improved antitrust enforcement by Japan.

The Japanese have agreed to stronger enforcement of their Antitrust Act, including increased use of criminal enforcement and tougher penalties for antitrust violations. The Japanese have taken action to provide more effective remedies for antitrust violations. The Division has been involved significantly in these ongoing policy issues and will continue to be involved in the future.

Kodak's Section 203 Investigation. Division personnel are participating in an ongoing group, chaired by the U.S. Trade Representative (USTR), examining Kodak's allegations that anticompetitive practices in the Japanese market have limited Kodak's penetration of that market, and that the Government of Japan has tolerated these anticompetitive practices.

4. Bilateral Antitrust Assistance Agreements

European Union (EU). In September 1991, the Department of Justice and the Federal Trade Commission signed a bilateral assistance agreement with the Commission of the European Union (EU). This agreement provides that the parties will cooperate with each other in the enforcement of their domestic competition laws. The Division had primary responsibility for negotiating this agreement on behalf of the Department and is contributing to the new cooperative effort required by the agreement, including the required bi-annual formal consultations. The Division is working with the EU to assess ways in which cooperation in merger and non-merger investigations can be enhanced.

Canada. In August 1990, the Department of Justice and the Federal Trade Commission signed a new antitrust cooperation agreement with Canada, replacing a 1984 memorandum of understanding. The Division, in consultation with the FTC, had the lead role in negotiating this agreement, which will facilitate the growing inter-agency enforcement cooperation between the U.S. and Canada and, it is anticipated, pave the way for a U.S. - Canadian International Antitrust Enforcement Assistance Act agreement.

New Mutual Assistance Agreements. Following passage of the International Antitrust Enforcement Assistance Act of 1994 (IAEAA), the Division has begun discussing the possibility of bilateral agreements with several countries. As these agreements are negotiated and put into effect, the Division will assume responsibility for not only pursuing investigations in cooperation with foreign countries, but also responding to requests for assistance by those countries as they pursue investigations concerning American businesses. During 1995, the Canadian government proposed amending Canada's antitrust law to IAEA-type provisions and expects to submit legislation to Parliament later this year. The EU also has stated its interest in the possible negotiation with the U.S. of an IAEA agreement. In addition, the Division is discussing the possibility of IAEA agreements with antitrust authorities of a number of other governments.

5. The Department's Antitrust Enforcement Guidelines for International Operations

In 1995, the Division and the FTC issued joint **International Guidelines**. These guidelines revised and updated previous guidance and required a substantial revision of resources, meetings with the U.S. antitrust agencies, and extensive consultation with the public. The guidelines are intended to help U.S. businesses and consumers understand the Department's approach to help international anticompetitive practices that hurt U.S. businesses and consumers. The Guidelines also help answer questions that U.S. and foreign businesses may have relating to the Department's international antitrust enforcement policy.

ANTITRUST DIVISION SPECIAL AND LITIGATION

6. Implementation of the Omnibus Trade Act of 1980

The Division has taken the lead on behalf of the Department in the interagency process of implementing the Omnibus Trade Act of 1980, which imposed tight deadlines on the Administration for making important decisions about many aspects of U.S. foreign trade policy. The Division plays an important role in relating the solutions to trade disputes that emerge from the trade act process should not include government-encouraged price-fixing and market allocation schemes, and that U.S. trade policy should continue to insure the extent to which U.S. firms and U.S. industries remain competitive. The Division also seeks to ensure that any competition-related provisions that are included in bilateral trade agreements are consistent with U.S. antitrust laws and otherwise appropriate.

7. OECD Competition Law and Policy Committee

The Division reported the United States Annual Report to the OECD for 1995 and led the U.S. delegation at the Organization for Economic Cooperation and Development (OECD) Competition Committee meeting in Paris, France, in November 1995. The Division has been active in the OECD process, which has been the primary forum for international cooperation in antitrust matters. OECD consultants, working with antitrust authorities from the United States and other countries, have prepared case studies of merger reviews and other acquisitions that have been reviewed by more than one country. Their report compares the ways enforcement authorities have handled the review of particular matters, with the goal of ensuring that the review process is better coordinated among countries. The report also contains recommendations, which the committee will discuss at future meetings. This project has the potential to enhance international cooperation on merger review and lead to broader coordination in antitrust matters. The Division has been active in the OECD process, which has been the primary forum for international cooperation in antitrust matters. The Division has encouraged member countries to expand antitrust enforcement cooperation and coordination through expanded sharing of investigative information.

8. Joint Discussions with Foreign Governments

The Division has responded to many requests from competition agencies in other countries, including the countries of Latin America and Eastern Europe, for information on U.S. antitrust developments and has met with many foreign competition officials to discuss competition matters. Of particular note in this regard were biannual consultations with the EU, Canadian, and Japanese antitrust authorities. These consultations helped to cement already close relationships between the respective agencies, which have many similar competition concerns.

9. Eastern Europe

The formation of democratic governments in Central and Eastern Europe has prompted requests for advice and consultation on competition policy. Working closely with the Department of State and with funding provided by the Agency for International Development (AID), the Division has been able to implement an assistance program for these emerging democracies. Since 1991, Division officials have met with senior officials of the Polish, Hungarian, Czech, Slovak, Bulgarian, Romanian, Estonian, Lithuanian, and Slovenian governments, and have provided technical assistance to these countries. In addition, the Division has provided technical assistance to the Polish, Czech, Slovak, Hungarian, and Slovenian governments. The Division and the Federal Trade Commission (FTC) have sent two-person teams to work with the new antitrust agencies in those countries for extended periods. In addition, the Division has sent short-term missions to Poland, the Czech Republic, Slovakia, Hungary, Bulgaria, Romania, Lithuania, Latvia, Estonia, Slovenia, and Albania. The Division's AID-funded Eastern European technical assistance program is scheduled to be phased out in 1997.

10. Technical Assistance to Latin American Countries

The Division is developing a solid relationship with Mexican, Venezuelan, and Brazilian competition officials who will enforce new competition laws. The Division has hosted Mexican competition officials as interns in 1994 and 1995, Brazilian officials in 1995 and 1996, and Venezuelan officials in 1994, 1995, and 1996.

11. Former Soviet Union

As in Eastern Europe, the formation of democratic governments in the former Soviet Union has prompted many requests for advice and consultation on competition policy. Also as in Eastern Europe, AID has funded a technical assistance program for some former Soviet countries by the Division and the FTC. At the request of the Russian and Ukrainian governments, the Division and the FTC have sent two-person teams to work with the antitrust agencies in those countries for extended periods.

ANTITRUST DIVISION Policies and Procedures

8. Domestic Policy

The following are recent examples of the Division's work in shaping, influencing and enforcing policies to protect and preserve competition within the American economy:

1. Health Care – Antitrust Enforcement Policy Statement

The Division continues its major effort to provide antitrust guidance to the health care community through policy statements on mergers, joint ventures, and other collective conduct among hospitals, doctors, and other health care providers. Such guidance also is a major priority of the Administration's health care reform efforts and other supporters of sound antitrust enforcement in the health care area. Six statements were issued jointly with the FTC in 1995: *Antitrust Review and Exemptions in Health Care*, *Antitrust Enforcement in Health Care*, *Antitrust Enforcement in Health Care*, *Antitrust Enforcement in Health Care*, *Antitrust Enforcement in Health Care*, and *Antitrust Enforcement in Health Care*.

Expedited business review procedures have also been initiated for health care mergers, and the number of business review requests continues to grow. We anticipate that the need for additional work in the area will continue through 1998, as health care markets continue to evolve.

2. Horizontal-Product Market Restrictions

The Antitrust Division worked closely with the Federal Trade Commission in developing exemptions from Hart-Scott-Rodino premerger reporting requirements for certain classes of transactions that the agencies believe, based on enforcement experience, are not likely to raise antitrust concerns. The exemptions are intended to reduce burden on the business community and to allow the antitrust agencies to focus on more complex cases. The exemptions cover acquisitions of ownership, control, or significant influence in the following categories: (1) acquisitions of oil, gas, and coal reserves; (2) acquisitions of shopping centers, hotels and motels; and, unless much higher thresholds were met, acquisitions of oil, gas and coal reserves. Proposed exemption rules were published in the Federal Register in July of 1995. After reviewing numerous comments on the proposed rules, the agencies worked closely on revising and expanding the proposed exemptions. Final rules creating the new exemptions were published in the Federal Register March 28, 1996 and took effect April 29, 1996.

On June 28, 1998, the Antitrust Division and the Federal Trade Commission announced that they have established a joint task force to examine whether and, if so, how the antitrust analysis of mergers should take into account any probable cost savings from mergers. The task force will consider whether to recommend any changes in the treatment of efficiencies in the agencies' joint 1993 Horizontal Merger Guidelines.

3. Intellectual Property Guidelines

On April 8, 1995, the Division issued *Revised Antitrust Guidelines for the Licensing of Intellectual Property*. These Guidelines clarify the approach that will be taken by both the FTC and the Division to market definition for technology and innovation markets. They serve both to direct the Department's enforcement efforts and discretion in this critical area and give guidance to the business community. The Guidelines are intended to provide a clear, predictable framework for the antitrust analysis of intellectual property licensing and other transactions. The Guidelines are designed to be consistent with applicable law and emerging technology.

4. Electricity Policy

The Division is participating in the OMB Interagency task force composed of representatives from DOE, EPA, OGA, and DOD. The participants are discussing administration policy on proposals concerning the Public Utility Regulatory Policy Act (PURPA).

5. Sanctions Guidelines

An important ongoing domestic policy project involves implementing key new Sanctions Guidelines for antitrust offenses. *Revised Sanctions Guidelines* for individual and organizational antitrust violations became effective in 1992. Individual antitrust violations face longer and more certain prison sentences than were previously provided. The Division policy staff worked closely with the Criminal Division and the Sentencing Commission to achieve appropriate and uniform organizational sanctions, as well as to implement individual sanctions for antitrust offenses. The Division continues to assess the impact of these Guidelines and may propose amendments in the future. The amount of Sanctions Guidelines work handled by the Division is not expected to decline, given the Guidelines' importance and constant evolution.

ANTITRUST DIVISION Initiatives and Functions

6. Proposed Legislation and Responses to Inquiries from Members of Congress

The Division's legislative program entails: drafting and supporting legislative proposals to amend antitrust laws or other statutes affecting competition; analyzing proposed legislation; drafting reports, and testimony prepared by other agencies; and submitting comments on hundreds of such items to other Justice Department components, the Office of Management and Budget, and Congress. It also includes preparing testimony to be given on behalf of the Department and the Administration, and coordinating responses to correspondence or other inquiries received from Congress, the White House, or other sources. Among important ongoing legislative efforts of the Division are the following:

Health Care Legislation. Division staff participated in the development of the Administration's position and legislation on health care reform. Important policy issues regarding possible antitrust exemptions and enforcement were involved in this project. The Division will continue to present views on antitrust exemptions as subsequent legislation is considered. Many health care reform bills have introduced provisions for the Department's assistance, some would create additional restrictions on the Attorney General's authority to conduct antitrust enforcement or otherwise conduct or influence of such actions, and others would create additional restrictions on the Attorney General's authority to conduct or influence of such actions.

7. Executive Legislation

Telecommunications Reform. On January 8, 1994, the President signed into law the Telecommunications Act of 1994. The Division remains committed to the Administration's goal of achieving comprehensive, overall telecommunications reform. Our goals are to promote free competition in local exchange and cable markets, to ensure that the public interest is protected, and to ensure that the Department's decision-making role is essential to ensuring that telecommunications reform results in free competition. The FCC is in the process of prescribing regulations to implement various parts of the Act.

ICC Support - Antitrust Review of Railroad Mergers. The Division actively participated in Administration efforts to obtain legislation that would address anticompetitive and antitrust aspects of regulation of the rail and motor carrier industries, such as special treatment for rail mergers and antitrust immunity for rail and motor carrier price fixing. As part of that effort, we assisted with development of the Administration's bill, met with Congressional staffers on various proposed bills, drafted proposed amendments, prepared letters commenting on the House and Senate bills and participated with DOT and other executive agencies in developing the Statement of Administration Policy on the House and Senate bills. On December 29, 1993, Congress ultimately passed, and the President signed, the ICC Reauthorization Act of 1993, which reauthorized the Interstate Commerce Commission's authority to regulate rail and motor carrier collective rate and pooling agreements. The Act, however, did amend prior merger and antitrust provisions by requiring the Surface Transportation Board (the successor agency to the ICC) to submit substantial weight to any recommendations of the Attorney General in assessing the anticompetitive effects of a transaction.

International Antitrust Enforcement Assistance Act. The 103rd Congress passed the International Antitrust Enforcement Assistance Act of 1994. The Act originated as a Division proposal, aimed at helping the U.S. government and FTC coordinate with foreign governments to investigate and prosecute anticompetitive behavior. The Act was amended to include provisions for the U.S. government and businesses to investigate and prosecute anticompetitive behavior beyond U.S. borders, but often has been out of reach because of legal limitations that have prevented the sharing of antitrust records between U.S. and foreign authorities. The Act authorizes reciprocal agreements between U.S. and foreign antitrust agencies to share confidential information and obtain evidence on one another's behalf. The Act passed both houses of Congress less than three months after its introduction, a result of intense efforts led by the Department of Justice to develop statutory language that carefully balanced enforcement needs with legitimate business concerns about safeguarding confidential business information.

Other recent legislation has significantly improved and modernized the nation's antitrust laws. Recent changes increased maximum fines for price fixing and bid rigging by corporations and individuals; provided treble damages to the United States when it is injured by price fixing or bid rigging, and modernized the prohibitions in Section 8 of the Clayton Act concerning interfering corporate executives. The Division had primary responsibility for drafting the proposals and supporting documentation on these issues, coordinating with other Executive Branch agencies in formulating the Administration's position, preparing testimony for Congress on the bill, and, in cooperation with the Department's Office of Legislative Affairs, preparing the proposals to Congressional staff members.

C. Employee Training

The Division has implemented a comprehensive litigation skills training program. A litigation skills course modeled on the widely-revered National Institute of Trial Advocacy (NITA) program was tailored, and all of the Division's attorneys and staff attorneys are participating in the program. The Division has also implemented a management training program for all staff attorneys and staff attorneys. The Division held highly successful Senior Litigator Conferences in 1993 and 1994, which allowed the Division's most experienced litigators to meet to discuss particular problems in typical antitrust cases and share possible solutions. Further, training is being provided to the Division's managers so that they may move ahead in challenging their employees to participate as team members, assure that all employees are productive, and focus resources on priority matters.

The training programs that the Division has implemented are in direct response to employee concerns. The Division had a poor employee record in the merger cases it litigated during past years, and the Division's managers have worked actively to establish training programs that are providing the Division's litigating teams with the critical edge that they need in order to win against some of the highest paid, top name attorneys in the country. In addition, emphasis on management training is one of the Division's major priorities, to assure that it gets the best out of limited resources.

Resources devoted to this program to reach precompetitive solutions to the challenges ahead will assure American leadership in the global economy during 1998.

The Division actively monitors the pending actions of Federal regulatory agencies through review of those agencies' dockets and industry or other publications, and through personal contacts in the industries and the agencies.

[illegible]

Authority for these various activities is found in 28 C.F.R. § 40.40; the Federal Coal Leasing Amendments Act of 1979, the Deepwater Port Act of 1974, 33 U.S.C. § 1806(a); the Atomic Energy Act of 1954, 42 U.S.C. § 2136; the Federal Land Acquisition Act, 48 U.S.C. § 1178-14; the 1946 Bank Merger Act, 12 U.S.C. § 1828; the Bank Holding Company Act, 12 U.S.C. § 1842; the National Housing Act, 12 U.S.C. § 1702n; the Outer Continental Shelf Lands Act, 43 U.S.C. § 1531, et seq.

The Competition Advisory Program sector has been successful in raising 29 solutions (including 14 starters), 17 workdays, and £3,628,000.

Federal Communications Commission. The Division has been active in a number of proceedings before the Federal Communications Commission (FCC). In these proceedings, the Division has advocated the introduction of greater competition in areas of telecommunications self characterized by substantial market power, and the reduction of unnecessary regulatory burdens in areas where competition has developed.

- [illegible]

ANTHONY DOMINON Business and Economics

6. Federal Energy Regulatory Commission (FERC)

Renewable Energy Development: On March 2 and April 3, 1995, the Division filed comments and reply comments with FERC in its proceeding on alternative power pooling institutions. Our initial comments recommended that FERC should encourage the development of "PowerCo" - an entity that would acquire voluntary short-term electricity purchases and sales by dispatching generating plants efficiently without regard to ownership of the plant or the transmission line. Formation of a properly structured "PowerCo" would serve the vertical link between electric generation (potentially competitive) and transmission and distribution (natural monopolies). The bill significantly lessens the opportunities for competitive abuses and could allow administrative or later legislative deregulation of the wholesale electric generation sector. The reply comments emphasized the subsequent bill are essential for a "PowerCo" to facilitate a competitive and deregulated market in the generation of electricity.

Electric Power Industry: On August 7, 1995, the Division filed additional comments in a FERC rulemaking proceeding on promoting competition in the wholesale electric power industry. FERC proposed to require electric utilities, which are vertically integrated from generation to transmission to local distribution, to provide transmission service to other generators on an open access, non-discriminatory basis. The Division's comments endorsed FERC's goal of promoting competition but recommended a less regulatory, more structural approach. In particular, the Division urged FERC to require utilities to separate the ownership and control of their generation facilities from their control (but not ownership) of transmission facilities. This would remove the utility's ability to discriminate against other, potentially lower cost or more efficient generators.

Market Power: Under the Federal Power Act, the Division filed comments in a FERC proceeding on the appropriate standards for determining whether electric utility markets meet the "public interest" test under the Federal Power Act. The Division's comments urged FERC to adopt the Horizontal Market Guidelines issued by the Division and the FTC, as the framework for analyzing market power in electric utility markets. The Division's comments also urged FERC to adopt the Horizontal Market Guidelines as the framework for analyzing market power in electric utility markets. The Division's comments also urged FERC to adopt the Horizontal Market Guidelines as the framework for analyzing market power in electric utility markets. The Division's comments also urged FERC to adopt the Horizontal Market Guidelines as the framework for analyzing market power in electric utility markets.

14. International Task Forces/Committees

Telecommunications International Task Force: The Division is participating in an inter-agency working group that is taking a comprehensive look at policies affecting communications and information industries. The working group is examining the future of these industries and identifying regulatory barriers that may be hindering U.S. competitiveness.

International Satellite Communications Working Group: The Division is participating in an inter-agency group that is considering the competitive and other economic implications of restructuring INTELSAT's participation in the international satellite market.

Oil and Gas Issues: The Division is participating in a task force with representatives of the Departments of Interior, Commerce and Energy to assist the Department of Interior in its investigation of allegations of underpricing of crude oil produced from federal and state oil and gas leases in California. If the allegations were true, the major companies involved may owe the United States substantial amounts of additional royalty payments. The role of the Division is to assist Interior in its efforts to determine whether the underpricing was a result of collusion among the major oil companies.

OECD International Task Force on Electricity Policy: The Division is representing the Department on a task force composed of representatives of DOE, EPA, OMA, and DOD which discusses energy policy issues, such as proposals to reform the Public Utility Regulatory Policy Act (PURPA) and the Public Utility Holding Company Act (PUHCA).

Asian Pacific: The Division is participating in discussions regarding Japan policy under the direction of the National Economic Council (NEC). The Division also provides advice in this area on legal matters falling within its responsibilities.

Intellectual Property: The Division is an active participant on a NEC interagency task force exploring possible legislative proposals regarding intellectual property. The task force also is designed to allow different agencies to coordinate their activities in the field of intellectual property.

Antitrust: Rep representatives of the Division are participating in an NEC working group on the US-UK antitrust treaty. This treaty is one of the most restrictive antitrust agreements between the US and a major trading partner. The Division's role in the discussions is to ensure that U.S. consumer interests in open defense markets are taken into account in evaluating different options.

International Economic Council (IEC): The Division is participating in discussions regarding Japan policy under the direction of the National Economic Council (NEC). The Division also provides advice in this area on legal matters falling within its responsibilities.

AMERICAN OVERSEAS BANKS AND FINANCIAL INSTITUTIONS

The Division's best opportunities to protect competitive markets from unfair activity, to make markets more competitive by reducing unneeded regulation, and thus to improve consumer welfare, lie in vigorous pursuit of two major activities: enforcement and competition advocacy. The latter program area serves to support one of the most important components of the Division's mission and has significant potential to affect business, industry, consumers and numerous hundreds of millions of dollars annually by eliminating or reducing regulatory requirements that discourage efficient and competitive investment and activities.

1. Bank Merger Restrictions:

Expenditures in Bank Merger Restriction	1984	1985	1986	1987	1988	1989	1990
Total Screenings ^{a/}	1,827	1,887	1,860	2,050	2,050	-	2,050
Screenings Requiring Competitive Analysis	1,177	1,211	1,200	1,430	1,430	-	1,430

^{a/} Total screenings includes review of bank, thrift, bank holding company, and thrift holding company mergers and acquisitions and applications for bank holding companies to engage in non-depository activities. Under the Bank Merger Act, the Bank Holding Company Act, and the Home Owners' Loan Act, the Department has the statutory responsibility to provide bank regulatory agencies with a report on the competitive effects of all depository institution merger and acquisition transactions that are submitted to those agencies for approval. As shown on the preceding chart, during 1989 the Division reviewed 1,887 bank merger applications. The great majority of bank merger applications reviewed by the Division do not raise any substantial competitive concerns. However, in order to reach any decision on competitive issues, the Division must investigate and analyze these applications thoroughly. The Bureau of Bank Transactions, Insurance, and Finance, Federal Reserve Bank of New York, reported in the *FRB Bulletin*, August 1990, that 1,225,000, and 1,225,000 applications for bank mergers and acquisitions were submitted to the Division in 1988 and 1989, respectively. The Division's review of these applications is a critical part of the government's regulatory role in the banking industry and is essential to the maintenance of a sound financial system.

In 1989, the \$2 billion merger between the Bank of Boston and BayBank was permitted to go forward after the parties agreed to sell 20 branch offices with total deposits of approximately \$600 million. The merger was approved by the Division and the Federal Reserve Bank of Boston. The Division's review of the merger was based on the parties' agreement to sell the 20 branch offices. Institutions involved in divestitures monitoring include: Continental Financial/Meridian Bancorp., Wells Fargo/First Interstate Bancorp., Wells Fargo/First Interstate Bancorp., NationsBank/Bank South, U.S. Bancorp/West One, and First Interstate. Bank mergers that have been thoroughly investigated by the Division but not challenged were the mergers of First Union and First Fidelity, Bank of America and Continental Trust, and First Chicago and MBQ.

1. BUREAU PROGRAM DESCRIPTION:

This program provides for the overall direction and management of the Antitrust Division, including the supervision and administration necessary to support the Division's ongoing mission. Top management provides policy guidance, administrative control, and directs the full range of Division activities. In addition to specific case division, management officials direct the overall administration and management of the Division, determining the allocation of a full range of resources among competing programs to meet the varied responsibilities of the Division as effectively as possible. Division officials establish and implement policies, procedures, and standards for the Division's internal operations and coordinate the Division's activities with other Federal agencies and State and local antitrust agencies. The Division's primary responsibility is to provide the services and tools needed by the operating staff to do its job.

The Management and Administration activity has base resources totaling 61 positions (including 3 attorneys), 60 workyears, and \$7,271,000.

2. ESTIMATED BUDGET:

Over the past two years, the structure and priorities of the Division have been changed in a concerted drive to streamline, reduce layers of bureaucracy, flatten management structure, and eliminate high-performance practices. In the Division's application of "streamlining government," the following changes have been effected:

- Reorganization (Continued).** The Division has applied the techniques of consensus building, early setting of goals and priorities, and "watering the hierarchy." Responsible managers meet with the leading staff early in the course of each civil investigation to identify and answer policy questions, to agree on the course and scope of the investigation, and identify desired outcomes and key issues. These efforts have increased efficiency and significantly enhanced the Division's enforcement mission by providing unnecessary effort and by focusing resources only on important matters for investigation and resolution. In addition, many of the preparation procedures formerly required have now been revised, providing for shorter and more effective internal memoranda for such purposes as status reports, clear recommendations and requests for compulsory process.
- Realignment of Existing Resources.** The Division has realigned the case responsibilities of its ongoing sections by type of enforcement, i.e., criminal, merger, and civil non-merger. Previously, the ongoing sections were organized around industry sectors, with each section handling a mix of criminal, civil, merger, and regulatory issues. Advantages of the realignment are an increased ability to build prosecutive expertise in specific areas, improved coordination of prosecutive efforts, and more effective use of prosecutive resources. Additionally, the Division has created several new units to enhance its ability to investigate and bring cases involving complex anticompetitive conduct that are not suitable for criminal prosecution.
- Expansion of Existing Resources for the Division.** Approximately 100 new positions have been hired in the past two years by the Division. These positions have leveraged the resources of the Division by providing direct, indirect, and support services, allowing staff attorneys to do professional work and increasing the caseload they can handle. It makes maximum use of the new base, the Division has established a new unit to handle the increasing number of cases involving complex anticompetitive conduct, and has increased the number of staff attorneys and paralegals to handle the increasing number of cases. The Division has also increased the number of staff attorneys and paralegals to handle the increasing number of cases involving complex anticompetitive conduct. This allows the immediate transcription of deposition notes and negotiated settlements to ensure the accurate and immediate transfer of facts, and three Division executives to concentrate on other critical support functions.
- Coordination with the Bureau.** Of great significance to the Division's progress to reach more closely with the public, increasing cases to them when appropriate, and working in tandem with other attorneys on matters of mutual concern. The program is in line with significant actions, including the filing of joint lawsuits by the Division and other Justice Department, and the transfer of assets, to enhance coordination in the areas for coordination.
- Revised International Antitrust Enforcement.** The Division established a 10th Deputy Assistant Attorney General position for international antitrust enforcement. This Deputy serves to guide the Division's efforts with respect to trade issues, cooperation with foreign competition authorities, international antitrust guidelines and other policy, and international investigations and cases.

Implications for Management Researchers. The Division has taken a strong lead in providing its members with the training they critically need in order to effect management practices that ensure maximum efficiency. Managers have absorbed lessons dealing with such issues as motivation and delegation to gain a new appreciation of the critical role they play in the organization. An aspect in the management and leadership of legal work that is providing rich-lead conclusions and innovations to both the Division's senior management and each section and office, conducting evaluations of their operations, assessing managers to their position, strengths and weaknesses. Building on this base, Division management and staff are making both operating methods and improvement suggestions. The Division's members are meeting regularly to discuss how to pursue changes in the management of the Division and throughout various management departments. These efforts have been coordinated. The Division's members are representing its senior management team in all relevant, representative and future management changes and, increasingly, managing changes to improve and enhance the Division's administrative efforts.

- Legislative Ethics Training.** The Division has instituted a comprehensive legislative ethics training program. A legislative ethics course is included on the newly renovated National Institute of Trial Advocacy (NITA) program and included, and all of the Division lawyers and law firm attorneys have participated. As a matter of fact, each of an investigation now routinely conducts a mock hearing prior to the hearing. In addition, the Division held highly successful former Legislative Conference in 1994 and 1995, which allowed the Division's most experienced legislators to meet to discuss particular problems in trying difficult cases and share possible solutions.

Throughout 1992, 1994, 1995, and 1998, the workload of the Artifacts Division has continued to increase phenomenally. The management of this tremendous increase has been addressed through the aggressive recruitment and administration of the Division by its senior staff, managers and administrators, who have overseen the reorganization, restructuring, coordination, and integration of the Artifacts Division in support of the Department's mission. The Division's management has been successful in increasing the workload of the Division and in increasing the number of artifacts processed and the number of artifacts returned to the donor.

Background:

[illegible][illegible]

As far as the authors are aware, no other studies have examined the effects of a combined physical and psychological intervention on the quality of life of patients with a chronic pain condition. The authors of this study have not only examined the effects of a combined physical and psychological intervention on the quality of life of patients with a chronic pain condition, but have also examined the effects of a combined physical and psychological intervention on the quality of life of patients with a chronic pain condition. The authors of this study have not only examined the effects of a combined physical and psychological intervention on the quality of life of patients with a chronic pain condition, but have also examined the effects of a combined physical and psychological intervention on the quality of life of patients with a chronic pain condition.

International (Middle East) Policy. *Wall Street Journal*, April 11/1985. On April 8, 1985, the Division and the FTC jointly issued new Antitrust Enforcement Guidelines for International Operations. In the "United States" role as the world's top exporter and importer, the Guidelines provide the framework to help select international anticompetitive practices that hurt U.S. businesses and consumers. The Guidelines also help American businesses have dealings in the Agencies' international antitrust enforcement policy.

ANTITRUST DIVISION Activities and Experiences

Corporate Leniency Policy Expanded - Issued in August 1965, the revised policy expanded the Division's 1978 policy not only to allow corporations that are the first to disclose their involvement in antitrust violations but also to encourage them to do so in order to receive leniency. The policy was revised to allow corporations to receive leniency if they disclose their involvement in antitrust violations to the Division within 30 days of the time they learned of the violation. The Division also expanded the number of corporations and individuals covered by the policy from 10 to 25 and the number of corporations covered by the policy from 10 to 25.

Individual Leniency Policy - Issued in August 1965, the revised policy expanded the Division's 1978 policy not only to allow individuals that are the first to disclose their involvement in antitrust violations but also to encourage them to do so in order to receive leniency. The policy was revised to allow individuals to receive leniency if they disclose their involvement in antitrust violations to the Division within 30 days of the time they learned of the violation. The Division also expanded the number of individuals covered by the policy from 10 to 25 and the number of corporations covered by the policy from 10 to 25.

Vertical Restraints Guidelines - These Guidelines, which pertained to vertical agreements involving terms within the same chain of distribution of a product, were withdrawn as they were found to be inconsistent with the Sherman Act. The Division has participated in the Administration's working group on legislation to modernize America's antitrust laws. The efforts of this group have led to an initiative to further encourage free entry in all areas of telecommunications, including local exchange service, information services, long distance, and manufacturing, as well as the period of competitive options for voice, data and video communications.

Telecommunications Working Group - The Division has participated in the Administration's working group on legislation to modernize America's antitrust laws. The efforts of this group have led to an initiative to further encourage free entry in all areas of telecommunications, including local exchange service, information services, long distance, and manufacturing, as well as the period of competitive options for voice, data and video communications.

B. Cooperation and Coordination

Coordination with States

The Division's achievement of close working relationships with state enforcement officials represents a major management accomplishment. Division officials took the initiative to establish a dialogue with the state attorneys general and the Federal Trade Commission. This dialogue has resulted in the Division's participation in the Federal Trade Commission's antitrust enforcement program. The Division also provides technical assistance to state attorneys general in the areas of antitrust law. Under the program, the Division provides assistance to the states in their investigations including making available staff attorneys, economists and financial analysts for consultation.

The following cases illustrate recent Federal-State antitrust law enforcement cooperation:

- The Division and the Attorney General's Office of Florida settled a historic, precedent-setting hospital merger case.
- The Division and the Arizona Attorney General challenged the major dental health plan in Arizona's use of a "fixed fee" plan. The plan had the effect of preventing the entry of new dentists into the market. The plan was challenged by the Division and the Arizona Attorney General, which obtained the use of their counsel, has nationwide implications because similar contract provisions are widely used in the health care industry.
- The Division and the Attorney General of Florida and Maryland challenged the merger of two national waste disposal firms. The consent decree requires the divestiture of assets in certain markets in Florida and Maryland and forbids the entry into long-term contracts in certain markets.
- The Division and the Pennsylvania Attorney General completed a joint investigation of resale price maintenance by a national seller of specialty toys for children. The company agreed to pay damages to the Pennsylvania Attorney General for distribution to consumers in the state who purchased the specialty toys and agreed to a consent decree with the Division prohibiting it from, among other things, discussing suggested resale prices with dealers or encouraging adherence to them.
- The Division and the Utah Attorney General's Office coordinated investigations of suspected exchanges of nurse salary information by Salt Lake City-area hospitals.
- The Division and the Attorney General of Connecticut and Massachusetts jointly investigated the merger of two of the largest banks in New England, which resulted in an agreement by the banks to divest 84 branches with total deposits of \$2.2 billion in Connecticut, Massachusetts, New Hampshire, and Rhode Island.

The Division also provides training for state antitrust attorneys and investigators as part of its cooperative efforts with the states. In March 1985, the Division opened its in-house training program to state antitrust attorneys. The Division also conducts seminars and conferences for state enforcement officials. Recent examples are the seminars on general antitrust law principles for the Arkansas Attorney General's Office, a briefing on resale price maintenance for the Indiana Attorney General and her top aides, and a seminar on health care joint ventures for the Texas Attorney General's antitrust staff. Finally, the Division provides technical assistance to state attorneys general in the areas of antitrust law. In the past year, the Division and FTC have explored "common ground" with antitrust officials from over 30 states.

ATTORNEY DIVISION **Activities and Resources**

C. Case-Administration with State Attorneys General and U.S. Attorneys

The Division continues to work vigorously to improve its existing programs of cooperation with federal, state and local law enforcement officials. A key element of this effort is the Division's "cross-designation" program under which federal, state and local prosecutors may be mutually appointed by the Attorney General to prosecute cases involving federal, state or local offenses. This program has two components: (1) the referral of law-enforcement and price-fixing matters with local or regional impact to the states; and (2) the cross-designation of trial attorneys to assist Division attorneys on bid-rigging and price-fixing matters. Such joint enforcement efforts can be very helpful in matters of pecuniary local concern where local resources can ensure more efficient and successful prosecutions.

D. Office Automation

The Division continues its effort to use of automated systems to ensure accurate and timely information and support to its managers and operating staff. In order to provide a continued high level of support to its sections and field offices, the Division has moved aggressively in the use of its on-line microcomputer network for a wide range of purposes, including desktop access to legal and economic research data bases, electronic mail, automated time and attendance reporting for payroll purposes, and management information systems, as well as word processing.

Another essential project included in the program is the development of means to provide increased support to Division professionals when they are working at remote field sites. With the increasing technological sophistication of both Division staff and the business world in general, access to the information developed and stored in the "office" computer is the key to managing and conducting a "remote" office. The Division has developed a program to provide this support. The program provides a "remote" office system that the professional can access to their "home" office system from a remote location. Once the portable terminals are in place, productivity tools can be readily made available to professionals located at the field site. This program will provide a wide range of products that expand office capabilities and improve overall effectiveness and efficiencies. The Division now offers its remote field staffs traditional word processing, legal research, electronic mail, time management, spreadsheet, data storage, retrieval capabilities and gateway to other systems to allow Division staff more effectively to compete with the private bar. This wider range of available tools not only assures a higher quality of analytical and written work, but also assures faster access to information necessary to decision making in all phases of enable field support.

The Division continues its efforts to provide its employees with automated systems capabilities that are complementary with other Departmental components and the core requirements of the need generation of office information systems as identified in the Department of Justice Uniform Office Automation Project.

E. Debt Collection

In support of its overall goal to collect government debts efficiently, the Attorney Division follows systematic and effective procedures for collection of court-imposed fines, penalties and damages. Collection of civil penalties and damages is handled by the Division directly. The Division's civil debt collection program has been highly successful. In 1986, the courts imposed \$8.2 million in civil penalties, damages and interest on individuals and corporations. The Division collected \$27.8 million in criminal fines. Criminal fines and penalties are referred to the U.S. Attorney's offices and handled in accordance with procedures established by the Department's Office of Debt Collection.

Justification of Adjustment in Base
(Dollars in Thousands)

		Permanent Positions	Workyears	Amount
	Initial increase in HSR base savings Decrease 1981 corporate funds	34	33	\$4,000
	Current services operations will be maintained with an increase of 34 permanent positions, 33 workyears and \$4,000,000 in the HSR base and offset by an equal amount of HSR resources is included from the 1981 Corporate from 1987 for a net change of zero.	34	33	\$4,000
	Initial increase			
1.	1988 pay rates			313
	The request provides for the proposed 2.8 percent pay rates to be effective in January of 1988 and is consistent with Administration policy of annual pay increases for the Department's employees. The amount requested, \$313,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$258,000 pay and \$74,000 benefits).			
2.	Annualization and increase of 1987 pay rates			101
	The pay annualization represents 1987 pay rates for the period October through December of the anticipated 1987 pay increase of 2.5 percent. The amount requested, \$101,000, represents the pay amounts for three-quarters of the year (\$77,000 for pay and \$24,000 for benefits).			
3.	Within-grade increases			308
	The request provides for the anticipated increase in costs of within-grade increases. The increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year increments of pay, and other factors. The amount requested, \$308,000, represents the pay amounts for three-quarters of the year (\$237,000 for pay and \$71,000 for benefits).			
4.	Correspondence Management System			22
	An increase of \$22,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. The new system provides an interactive tracking capability, the ability for components to access and transfer information electronically, improved record keeping and improved reporting capability.			

		Permanent Positions	Workyears	Amount
	Increases (continued)			
5.	Investigation/Reinvestigation			3
	Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each officer, "Not or otherwise, in the Department of Defense, shall be subject to a security investigation and clearance process. The Department shall cover the costs of additional contractor support needed to ensure timely compliance with the Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely related to newly appointed civilian officers and employees.			
6.	General pricing level adjustments			420
	The request applies OMB pricing guidance to selected agency categories. The increase costs identified result from applying a factor of 2.8 percent against those subobject classes where the prices that the Government pays are established through the pricing system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, pricing costs, transportation costs and utilities.

EXECUTIVE OFFICE FOR UNITED STATES ATTORNEYS

UNITED STATES ATTORNEYS
Salaries and expenses
Summary Statement

Fiscal Year 1998

The United States Attorneys are requesting, for 1998, a total of 8,856 positions (including 4,197 attorneys, 8,946 workyears, and \$4,016,817,000). This request represents an increase of 826 positions (including 220 attorneys), 318 workyears, and \$57,853,000 above the 1998 base.

The United States Attorneys are the principal litigators for the United States Government. It is their task to prosecute those who violate our nation's laws, to protect the public from those who would illegally further their private interests at the expense of the general welfare, to protect the legitimate powers of the Federal Government from those who would usurp those powers, and to assert policies established by the Congress, the Administration and the Attorney General.

The United States Attorneys' appropriation presently consists of four decision units. They are: Criminal Litigation; Civil Litigation; Legal Education; and Management and Administration. This request will establish an additional decision unit, State and Local Training. The request for each decision unit is discussed below.

CRIMINAL LITIGATION:

Criminal litigation is conducted by 94 United States Attorneys' offices, each of which has the responsibility for the investigation and prosecution of a wide-range of criminal violations. The United States Attorneys' request includes an increase of 496 positions (including 172 attorneys), 249 workyears and \$40,202,000 to: prosecute major terrorism cases; continue efforts to address drug, immigration and official corruption cases arising from the Southwest Border; implement the President's anti-drug initiatives; enhance efforts against organized crime groups; initiate new efforts in child support recovery cases; meet required victims rights mandates; and, address the critical needs of the District of Columbia Superior Court function. These include: efforts to reduce gang violence; begin vertical prosecution of domestic violence felony cases and accommodate the monumental increase in misdemeanor prosecutions; investigate and prosecute cold homicide cases; expand community out-reach programs; and finally, repair the infrastructure of the United States Attorney's Office for the District of Columbia.

The United States Attorneys are tasked with the prosecution of violators of the nation's criminal laws. In meeting this mandate, the United States Attorneys maintain the flexibility to implement priorities of the Administration, the Attorney General, and also to address emerging crime trends. The principal programs are:

district. They work with federal law enforcement agencies, other federal agencies, state and local agencies, and violent crime task forces to ensure that law enforcement resources are effectively coordinated to address the problems in their districts. The United States Attorneys also work with other federal agencies, state and local agencies, and community agencies and groups to implement crime prevention programs. Closely tied to the Violent Crime program is the Narcotics and Dangerous Drug program. Violence is a common means to settle disputes and protect territory by those involved in the drug trade. Operation Seed and Seed continues to be used by United States Attorneys in a two-pronged strategy to remove violent gangs, drug dealers and other violent offenders from the community, and then assisting in providing stimulus for economic freedom. The United States Attorneys are committed to providing continuing leadership in these innovative efforts.

The Official Corruption program addresses one of the Department of Justice's most vital tasks because such corruption corrodes the democratic process and the peoples' faith in their public servants. These cases continue to be a high priority of the United States Attorneys because of the impact of these cases in the overall scheme of our government.

The Organized Crime program addresses investigations and prosecutions of those individuals who, as members of organized criminal groups, terrorize their victims through extortion, bribery, kidnapping and murder. The focus of this program has expanded beyond the traditional organized crime groups to include all organized gangs, youth gangs, and other gangs which are growing at an alarming rate.

The Economic Crime program is responsible for the prosecution of violators of federal laws traditionally considered white-collar crimes. Frauds, particularly bank fraud, bankruptcy fraud, health care fraud, insurance fraud, telemarketing fraud, and government program fraud continue to rise and are of major concern to the United States Attorneys. A variety of other fraud prosecutions are included in this program. In addition, criminal prosecutions in appropriate environmental crime cases are a critical component of this program.

The Other Crimes program covers a broad range of crimes, including civil rights violations, hate crimes, sexual assault, child abuse and molestation, violations of immigration laws, and recovery of child support from delinquent parents. The United States Attorneys have placed a renewed emphasis on this program.

The Asset Forfeiture program provides a critical law enforcement tool to take away the profits earned through criminal activity and therefore, dismantle the infrastructure of organized criminal groups.

The Appeals program ensures that conviction and sentences obtained in district courts are defended and upheld.

CIVIL LITIGATION:

Civil litigation is conducted by 94 United States Attorneys' offices, each of which has the responsibility to protect and advance the interests of the United States Government through representation of our client agencies and protection of the United States Treasury from claims against it. The United States Attorneys' request includes an increase of 118 positions, 60 workyears and \$9,300,000 to improve the defense of the United States against certain monetary claims, protect the financial interests of the United States through the assertion of the Federal Government's commercial interests in defensive litigation, and implement the Electronic Freedom of Information Improvements Act of 1996 in the United States Attorney's Office for the District of Columbia.

The principal defensive litigation programs are:

The Affirmative Civil Program protects the Federal fisc through the conduct of aggressive affirmative litigation. This area includes Health Care, Medicare, Securities and Insurance fraud, and Environmental cases. The United States Attorneys have established Affirmative Civil Enforcement (ACE) teams in 37 districts with 110 positions funded by the Three Percent Fund. The ACE program has produced positive results from both a law enforcement and monetary recovery perspective. Effective law enforcement against white-collar fraud and the protection of public funds require flexible and timely use of the full range of civil and criminal remedies. The ACE program fights fraud quickly and effectively, working with investigative agencies and criminal prosecutors. The ACE program produces tremendous financial dividends for the United States. Beyond the financial recoveries, ACE cases have a major impact on the regulatory community by advancing agency goals. The success of these programs protects the medical system, food stamp programs, and other government-funded programs.

The Other Affirmative Civil Litigation program aggressively tracks and litigates fraud against the government.

In the Debt Collection program, the United States Attorneys collect monies from individuals and entities who owe the Federal Government billions of dollars in unpaid civil, criminal and tax debts; and, enhance enforcement and collection by the Federal Government of claims for monetary penalties against individuals and entities who violate the federal civil statutes. The Federal Debt Collection procedures Act of 1990 opens up many avenues for collecting money.

LEGAL EDUCATION:

The Legal Education program is committed to improving the quality of legal representation and services provided by Executive Branch attorneys and support staff employed by the federal government. The program provides basic programs in federal practice for newly hired attorneys, specialized courses in substantive areas of law, and advocacy skills. The United States Attorneys request includes 9 positions (2 attorneys), 6 FTE, and \$6,137,000 to activate the National Advocacy Center and enhance legal training provided to Department of Justice and Executive Branch attorneys and support staff.

STATE AND LOCAL TRAINING

This program will provide resources to enable the National District Attorneys Association (NDAA) to co-locate their training program for state and local prosecutors and allied professionals at the MAC. The request includes \$2,097,000 to provide operating funds for the NDAA's participation at the MAC.

MANAGEMENT AND ADMINISTRATION

The Management and Administration program encompasses all of the Executive Office for United States Attorneys (EOUSA) with the exception of the Office of Legal Education. The EOUSA provides general assistance and supervision to the 94 United States Attorneys' offices, and coordinates with the other organizational units of the Department under the direction of the Deputy Attorney General. The request includes an increase of 5 positions, 3 workyears and \$17,000 to reduce Freedom of Information Act/Privacy Act request backlogs and implement the Electronic Freedom of Information Improvement Act of 1996.

Justification of proposed changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, United States Attorneys

For necessary expenses of the Office of the United States Attorneys, including intergovernmental agreements, and cooperative (\$23,340,000) of which not to exceed \$2,500,000 shall be available until September 30, (1998) for the purpose of (1) providing training (or) personnel for the Department of Justice in debt collection, (2) providing services to the Department of Justice related to labor relations and their property, (such as title searches, debtors' exemption statements, credit reports, and the collection of assets), (3) paying the costs of the Department of Justice for the sale of real property (not covered by the sale proceeds, such as auctioneers' fees and expenses, maintenance and protection of property and businesses, advertising and title searches and surveying costs), and (4) paying the costs of processing and tracking debts owed to the United States Government; Provided, That of the total amount appropriated not to exceed \$8,000 shall be available for official reception and representation expenses; Provided further, That not to exceed \$10,000,000 for automated litigation support contracts shall remain available until expended; Provided further, That \$1,900,000 for the supervision of the International Brotherhood of Teamsters national election, shall remain available until expended; Provided further, That in addition to reimbursable full-time equivalent workyears available to the Office of the United States Attorneys, not to exceed \$,832 positions and 8,936 full-time equivalent workyears shall be supported from the funds appropriated in this Act for the United States Attorneys) That not to exceed \$6,000,000 for office move-up, relocation and transportation shall remain available until September 30, 1999. Provided further, That not to exceed \$8,000,000 for the design, development and implementation of an information systems strategy for D.C. Superior Court shall remain available until expended. Provided further, That not to exceed \$7,100,000 for the operation of the National Advocacy Center shall remain available until expended.

Explanation of Changes: Several simplifying or clarifying deletions (and one addition, the word "net") are proposed. These changes are not intended to make substantive changes. In addition the following changes are proposed.

1. The first change facilitates the move of the Office of Legal Education to South Carolina.
2. The second change increases the amount available for expenditure in FY 1998.
3. The third change makes the debt collection funds available through FY 1999.
3. The fourth change provides multi-year flexibility to fund all costs associated with a move or renovation at the planning stage.
5. The fifth change provides language for the development and implementation of a long range information systems strategy in the Superior Court operations of the United States Attorney for the District of Columbia without fiscal year constraint.
5. The sixth change provides multi-year flexibility to fund operating expenses for activation of the National Advocacy Center.

**United States Attorneys
Salaries and Expenses
Government Performance and Results Act Requirements
Program and Performance**

Mission: The mission of the United States Attorneys is twofold. First the United States Attorneys prosecute violations of federal criminal law and ensure that the "...guilty are punished and the innocent are freed...". In the performance of this mission, the United States Attorneys must act vigorously to protect the public interest while ensuring that individual offenders are defended and upheld. The United States Attorneys are the nation's litigators representing the United States and its various agencies in civil and equity actions and, as appropriate, administrative matters. In this capacity, they must protect the public health and safety, see that just claims against the United States are paid while defending the Treasury from excessive or unwarranted claims and damages, and collecting those monies due and owing the public Treasury.

Organizational Goals:

1. To identify, prosecute, and convict those persons and legal entities who have committed offenses against the laws of the United States.
2. To maintain a strong and unswerving presence in the appellate courts, ensuring that the convictions and sentences obtained against criminal offenders are defended and upheld.
3. To protect and to advance the interests of the United States through the conduct of affirmative and defensive civil litigation.
4. To collect monies owed the United States which cannot be collected through administrative means.
5. To provide high quality and cost effective basic, specialized and continuing legal education for the Department attorneys and support staff.
6. To provide high quality continuing legal education programs to Executive Branch attorneys.

<p>A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your programs.</p>	<p>Performance Indicator 1a and 1b: Percentages/numbers displayed here include total of all criminal attorney workyears devoted to violent crime, official corruption, health care fraud, telemarketing fraud, computer crime (high technology), non-OCDETF drugs, organized crime, and immigrating enforcement priority program areas, as well as the District of Columbia Superior Court.</p> <p>Performance Indicator 1c and 1d: The Organized Crime Drug Enforcement Task Force (OCDETF) budget is prepared separately from the rest of the United States Attorneys' operating budget. We have included this information here as separate line items because OCDETF is a priority program area for the United States Attorneys and consumes a substantial portion of available criminal workyears. It should be noted, however, that FY 1997 and FY 1998 targets do not account for any increases in OCDETF resources because such resources are accounted for separately in the OCDETF GPRA Performance Measurement Table.</p> <p>Performance Indicator 2: Only non-fugitive pending cases are included here since fugitives cannot be prosecuted until they are located and apprehended.</p>
<p>B. Factors Affecting FY 95 Program Performance: Describe reasons for any significant differences between target levels of performance and estimates of actual performance, whether positive or negative</p>	<p>None</p>
<p>C. Factors Affecting Selection of FY 96 and 97 Targets: Provide information on the selection of target levels of performance, where necessary.</p>	<p>The United States Attorneys' caseloads/goals can be affected by a number of factors including available resources; available resources in investigatory agencies, and changes in their enforcement methods and other resources; changes in statutory, regulatory, and case laws; changes in ethical and professional standards; changes in Administration and Department priorities; changes in rates or types of crime; changes in the court/prison systems; and changes in local and state governments and their policies.</p> <p>Performance Indicator 1: Projected increases in FY 1998 target levels are based on a calculation of the expected increase in attorney workyears over the existing number of attorney workyears devoted to priority program areas. These percentage increases have been adjusted to reflect the time required to hire new attorneys and for new attorneys to be able to handle a full complement of cases.</p>

* Designates an indicator covering a requested FY 1998 program change. A performance indicator and target must be set for the results that will be achieved should resources be received.

Intermediate Outcome						

End Outcome	9.						
Productivity/ Efficiency	10.						
Productivity/ Efficiency	11.						

A. Definitions of Terms or Explanations for Indicators: Clarify potentially confusing terms. Assume a low level of familiarity with your program.

Performance Indicator 2a and 2b: Percentages/numbers displayed here include workyears devoted to affirmative civil enforcement and debt collection assistance priority program areas.

Performance Indicator 2c and 2d: Percentages/numbers displayed here include only those workyears devoted to defensive civil litigation. While defensive civil litigation is not deemed a priority program area, per se, this information is presented because it is mandatory that the United States Attorneys defend the government's interests in all lawsuits filed against the United States. No increases are seen in the FY 1997 target for defensive civil litigation because no increase in resources is expected.

B. Factors Affecting FY 95 Program Performance: Describe reasons for any significant differences between target levels of performance and estimates of actual performance, whether positive or negative.

None

C. Factors Affecting Selection of FY 96 and 97 Targets: Provide information on the selection of target levels of performance, where necessary.

Performance Indicator 1: The United States Attorneys' caseload/goals can be affected by a number of factors including resources; available resources in client agencies and changes in client agency policies; changes in statutory, regulatory, and case laws; changes in ethical and professional standards; changes in Administration and Department priorities; changes in the number and type of suits against the United States and in the number and type of debts owed to the United States; and threats to public health and safety.

Performance Indicator 1 and 2: Projected increases in FY 1998 target levels are based on a calculation of the percentage increase in expected attorney workyears over the existing number of attorney workyears devoted to the priority program areas. This percentage increase has been adjusted to reflect the time required to hire new attorneys and for new attorneys to be able to handle a full complement of cases.

Performance Indicator 3: Collections are projected to continue to increase with the advent of affirmative civil enforcement. However, these levels are not projected to equal FY 1994. FY 1994 collections included six exceptionally large recoveries.

* Designates an indicator covering a requested FY 1998 program change. A performance indicator and target must be set for the results that will be achieved should resources be received.

ACTIVITY: CRIMINAL LITIGATION

	Perm. FSA.	VX	Amount
1997 Appropriation Anticipated	6,160	6,339	\$675,042
1998 Base	6,163	6,342	693,198
1998 Estimate	6,659	6,521	733,240
Increase/Decrease	496	249	\$ 40,042

BASE PROGRAM DESCRIPTION: The United States Attorneys are responsible for the investigation and prosecution of a wide range of criminal activities. The offices handle approximately 95 percent of the criminal cases prosecuted by the Department of Justice. The United States Attorneys receive most of their criminal case referrals, or "matters," from federal investigative agencies or become aware of criminal activities in the course of investigating or prosecuting other cases. They also receive criminal referrals from state and local law enforcement agencies. After consideration of criminal matter, the United States Attorney decides the relevance of bringing criminal charges and, when deemed appropriate, initiates prosecution. Except for misdemeanor offenses and instances in which an alleged offender waives the right to a grand jury indictment, the United States Attorney presents evidence against an alleged offender to a grand jury. The grand jurors decide whether to return an indictment. If an indictment is returned, the United States Attorney then presents the criminal charges in open court at the arraignment of the defendant.

Although historically, only about 12 percent of all criminal defendants are disposed of by trial, the United States Attorneys must always be prepared to go to trial. Consistent preparation for trial minimizes the risk of dismissal for noncompliance with the Speedy Trial Act and strengthens the government's position in negotiations with defense counsel for a guilty plea. When a guilty plea is not obtainable, a trial becomes necessary. The United States Attorney then presents factual evidence to convince the jury or the judge in a nonjury trial, of the defendant's guilt. If the defendant is found guilty, the United States Attorney decides the appropriate level of punishment to be imposed. The United States Attorneys' offices handle most criminal appeals at the intermediate appellate level. After filing a brief, the United States Attorney may be required to participate in oral argument before the United States Court of Appeals. If there is a further appeal, the United States Attorneys may be called upon to assist the Department's litigating division and the Solicitor General in preparing the case for review by the United States Supreme Court.

The criminal litigation program objectives are accomplished through the work of 94 United States Attorneys' offices, each of which has responsibility for the investigation and prosecution of a wide range of criminal behavior.

ACTIVITY: CIVIL LITIGATION

	Perm. FTEs	MY	Amount
1997 Appropriation Anticipated	1,953	2,054	\$214,402
1998 Base	1,953	2,054	221,477
1998 Estimate	2,071	2,114	230,277
Increase/Decrease	118	60	\$ 9,300

BASE PROGRAM DESCRIPTION: The United States Attorneys serve as the attorneys and counselors for the United States in civil litigation. Their workload in the civil field includes providing competent legal representation to respond to civil actions brought against the United States, aggressively pursuing civil enforcement of federal laws and regulations, and efficiently recovering federal financial resources. Both affirmative and defensive civil representation are of vital concern to the United States Attorneys as both activities preserve, protect, and defend the interests of the United States and federal resources.

Civil matters and cases consume a significant portion of the United States Attorneys' resources, especially in the areas of recovery of money, defense of monetary claims and debt collection. The litigation brought against the Government covers a range of causes of action, including tort (damage suffered as a result of Government action--e.g., collision with a postal service vehicle, malpractice by a Government physician, invasion of privacy by a Government agent), the determination of social security benefits, tax refunds, contract violations, race, sex, and age discrimination, and habeas corpus. The Government also initiates civil litigation against private parties for a wide range of purposes. These purposes include the recovery of money taken from the Government by fraud, the acquisition of interests in land by eminent domain proceedings, the enforcement of administrative summonses, the enforcement of environmental, admiralty, civil rights and other laws for which there are civil law penalties, and the recovery of debts owed to the Government.

The civil litigation program objectives are accomplished through the work of 94 United States Attorneys' offices, each of which has responsibility to respond promptly and professionally to all suits brought against the United States, its officers, and employees, and to collect monies owed to the United States.

BASE PROGRAM DESCRIPTION: The Executive Office for United States Attorneys (EOUSA) was created on April 6, 1993, by Attorney General Order No. 8-33, to meet a need for a closer liaison between the Department of Justice in Washington, DC, and the United States Attorneys. The EOUSA is under the supervision of the Deputy Attorney General.

The mission of the EOUSA is to provide general executive assistance to the 94 Offices of the United States Attorneys; and to coordinate the relationship between the United States Attorneys and the organization components of the Department of Justice and other Federal agencies.

The major functions of the EOUSA are to:

- Facilitate coordination between the Offices of the United States Attorneys and other organizational units of the Department of Justice.
- Evaluate the performance of the Offices of the United States Attorneys, making appropriate reports and taking corrective action where necessary.
- Publish and maintain a United States Attorneys' Manual and a United States Attorneys' Bulletin for the internal guidance of the United States Attorneys' offices and those other organizational units of the Department concerned with litigation.
- Supervise the operation of the Office of Legal Education (the Attorney General's Advocacy Institute and the Legal Education Institute) which develops, conducts, and assists in the training of all Department of Justice legal personnel and other Federal legal personnel.
- Provide the Attorney General's Advisory Committee of United States Attorneys, and all of its subcommittees, with such staff assistance and funds as are reasonably necessary to carry out the Committee's responsibilities.
- Provide support to the Deputy Attorney General regarding United States Attorney appointments.

- Plan and execute United States Attorneys' conferences and other conferences in the direct support of the United States Attorneys' management of their offices.
- Provide general direction and supervision of the management and policy activities of the United States Attorneys' financial litigation programs, including the establishment of policy and procedures for debt collection activities, affirmative civil enforcement and bankruptcy litigation, litigative and technical support, training, publication of a newsletter, coordination and implementation of legislative initiatives and the establishment of guidelines, advice, and other guidance.
- Establish, coordinate, and interpret policy, guidelines, and procedures on criminal fine collection issues.
- Provide general legal interpretations, opinions, and advice to United States Attorneys in areas of recalls, cross-designations, outside activities, representation, allegations of misconduct, adverse actions, grievances, labor relations, and ethical and conflict of interest questions.
- Provide general support to the United States Attorneys in matters involving Assistant United States Attorney and Special Assistant United States Attorney appointments.
- Promote, facilitate, and monitor programs within the Offices of the United States Attorneys designated by the Attorney General as priorities of the Department.
- Provide overall administrative management oversight, technical and direct support to the United States Attorneys in the program areas of facilities management (to include acquisition of real property/space, construction, renovation, repair and relocation); and support services programs (to include personal property management, small purchases procurement, motor vehicle support, telephone system, printing and records disposition).
- Provide overall management oversight, technical and direct support to the United States Attorneys in the area of security programs (to include physical security, information security, communications security, security awareness and safety).
- Analyze, design, and provide automated services and systems in support of the litigation mission and of selected administrative functions of the United States Attorneys' offices including development, implementation, and monitoring of policies and programs for office automation, systems development activities and data base maintenance.
- Arrange for the acquisition and installation of integrated office automation systems in the Offices of United States Attorneys.
- Develop case management systems and provide user assistance for the case management systems and litigation support for the United States Attorneys' offices.

- Provide technical support to users of automated systems in the Offices of United States Attorneys to manage and support the acquisition and maintenance of office automation equipment.
- Design, program, and support the operations and software for caseload and collections systems and administrative/litigative applications in the districts and the central systems, provide technical assistance, produce the annual Statistical Report, and monitor the quality of the data of the Office of United States Attorneys.
- Provide operating personnel and security administrative services, as well as Federal personnel policy and procedural guidance to the 94 United States Attorneys' offices located nationwide, including the development and administration of an Administratively Determined (AD) pay system for attorneys.
- Support the Offices of United States Attorneys in the conduct of their Law Enforcement Coordination Program as directed by the Attorney General. This includes providing technical assistance in preparing systems materials and other technical assistance for LECG-related functions acting as liaison with the LECG/VW Subcommittee of the Attorney General's Advisory Committee, and the promotion of the LECG Program throughout the Federal and local government.
- Serve as the liaison on Victim-Witness assistance activities within the Offices of the United States Attorneys, supporting the United States Attorneys in their work relating to these matters.
- Provide budget and fiscal assistance and guidance to the 94 Offices of United States Attorneys.
- Track, provide, and analyze data related to the work of the United States Attorneys' offices in the development of budget and litigative priorities.
- Respond to requests under the Freedom of Information Act and Privacy Act on behalf of the Offices of United States Attorneys, coordinate and respond to litigation arising from these matters and provide advice and training to the United States Attorneys' staffs relating to FOIA/PA.
- Provide centralized leadership, coordination, and evaluation of all equal employment efforts throughout the Offices of United States Attorneys--administering both the Affirmative Action and Complaints Processing Programs.
- Respond to inquiries from members of Congress and private citizens and review and comment on legislative and regulatory proposals relating to the activities of the Offices of United States Attorneys.
- Provide technical, administrative, design, and maintenance support in the area of video telecommunications to enhance cooperative efforts among the Offices of United States Attorneys and the Litigating Divisions of the Department.
- Provide information and guidance to United States Attorneys' offices on pending legislation pertinent to the work of the United States Attorneys' offices; prepare testimony and background for Congressional oversight and appropriations hearings.

ACTIVITY: LEGAL EDUCATION

	Perm. Pos.	WX	Amount
1997 Appropriation Anticipated	27	26	\$7,406
1998 Base	27	26	7,406
1998 Request	26	24	12,903
Increase/Decrease	9	6	6,237

BASE PROGRAM DESCRIPTION: The Office of Legal Education (OLE) develops, conducts, and authorizes the training of all Federal legal personnel [28 C.F.R. §0.22 (1990)]. OLE coordinates all legal education and attorney training for the Department of Justice and all other departments and agencies of the Executive Branch. OLE pursues its mission through the administration of two institutes--the Attorney General's Advocacy Institute (AGAI) and the Legal Education Institute (LEI). These institutes carry distinct, yet compatible, training missions. Attendance at AGAI courses is usually restricted to Department of Justice personnel, while LEI training programs are open to all Executive Branch personnel.

Public Law 102-140 provided authority and funding to "accommodate the relocation of OLE to a site on the campus of the University of South Carolina where legal education training shall be provided to Federal, state, and local prosecutive and litigative personnel. A required education program to the Appropriations Subcommittees submitted a report concerning the relocation of the OLE. A relocation site was identified and a cooperative agreement was executed between the Department and the University on July 19, 1993. An architectural and engineering design contract was executed between the Department and Robert A.M. Stern and Wilson/Tate Architects in calendar year 1993. A contract for construction management services was signed early in calendar year 1994 and a construction contract was awarded in calendar year 1996. Construction is underway and classes are tentatively scheduled to begin in April 1998.

AGAI is the primary vehicle for providing instruction to Department of Justice attorneys and Assistant United States Attorneys from the 94 United States Attorneys' offices located throughout the 50 states, the District of Columbia and the territories of Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands. In addition, AGAI extends an invitation through the National Association of District Attorneys and the National Association of Attorneys General to state and local prosecutors who express an interest in attending advocacy and Federal practice courses. Basic programs for newly hired attorneys include criminal, civil, asset forfeiture advocacy, appellate courses, Federal practice seminars, and specialty seminars. Priority substantive areas of the law, Advocacy skills programs are also available for attorneys with litigation or prosecutive experience who are new to the Federal legal system. AGAI also provides continuing education for attorneys with litigation or prosecutive experience. The Federal program includes seminars for state and military prosecutors, and as continuation training for Department attorneys after the basic criminal, civil, and asset forfeiture advocacy courses.

AGAI uses experienced Federal trial and appellate attorneys as instructors for all its programs to present lectures, lead discussion groups, direct evidentiary exercises, and offer personalized critiques. Federal judges also participate at AGAI's advocacy courses, presiding over mock trials and mock appellate arguments.

The caliber of the AGAI faculty and the use of sophisticated videotaping facilities provide students with unique training experience in trial and appellate advocacy. A significant feature of the advocacy training is the use of "learn-by-doing" exercises which concentrate on courtroom skills. The exercises simulate courtroom activities and provide students with classroom critiques and individual video replay analysis. AGAI holds seminars at its "headquarters" as well as other locations around the United States. Finally, the large attorney work force has resulted in high demand for attorney management training for senior criminal and civil attorneys. AGAI has helped to meet that challenge by providing management courses for attorney supervisors of all levels in the United States Attorneys' Offices.

AGAI operates a videotape lending library for United States Attorneys' Offices. Select courses offered by AGAI are videotaped and made available upon request. In addition, commercially produced tapes by recognized legal experts have been purchased by AGAI, and the tapes are sent to United States Attorneys' Offices upon request to supplement their in-house training programs.

LBI directs its programs on Federal civil and administrative law and practices to all attorneys in the Executive Branch, including those in the Department. LBI offers training in civil discovery and trial techniques, negotiation techniques, administrative law areas such as bankruptcy, the Freedom of Information Act, ethics, environmental law, Federal employment, regulatory processes, government contracts, legal research and writing for attorneys, management of attorneys, and computer law. These courses are held at both the LBI facility, located in Washington, D.C., and local facilities (which accommodate 100 to 350 students). LBI also provides a "learn-by-doing" method of instruction and evidentiary trial skills for agents and attorneys. The Department of Justice, through the Administrative and Evidentiary Trial Skills Course, provides training for Federal attorneys from all agencies, including the Department of Justice, are participants as well as advisors, curriculum developers, lecturers, and instructors. LBI also contracts with professional educators as instructors.

LBI develops and administers paralegal courses covering basic and advanced skills in both civil and criminal law. These courses are offered to personnel of United States Attorneys' Offices, the Department of Justice, and agencies in the Executive Branch. Support staff training for personnel in United States Attorneys' Offices is provided through LBI, which develops the curricula, recruits instructors, and assists local offices with administering the courses. In addition, LBI operates a videotape lending library which provides commercially produced lectures on advocacy skills to government agencies upon request.

Continuing Legal Education credit is provided through OLE for all OLE courses.

ACTIVITY: STATE AND LOCAL TRAINING

	Perf. Est.	MY	Amount
1997 Appropriation Anticipated			----
1998 Base	--	--	----
1998 Request	--	--	22,097
Increase/Decrease	--	--	\$2,097

The National Advocacy Center (NAC) will become operational in FY 1998. The NAC will provide training to federal, state, and local attorneys. The National District Attorneys Association will implement a continuing education program at NAC for state and local prosecutors and allied professionals. Thus, for the first time, joint training programs will be held for federal prosecutors, civil government attorneys and local prosecutors in areas where they have mutual interests.

INITIATIVES

Perm. Fol.	MY	Amount
30	15	\$3,100

COUNTER-TERRORISM
Criminal Decision Unit

The United States Attorneys are requesting 30 positions (18 attorneys) 15 MY and \$3,100,000 to address the problem of terrorist attacks against the United States and its citizens.

In recent years, domestic and international terrorism have become more commonplace. Until recently, most acts of terrorism took place in the skies, on the high seas, or in foreign countries. The bombing of the World Trade Center and the Murrah Federal Building were a terrifying indication that times have changed.

In response to the rise in terrorism, in August 1995, the Attorney General issued a memorandum directing each United States Attorney to appoint an attorney to serve as the district point of contact for domestic terrorism issues, to assess the domestic terrorism problem in their districts, and to report domestic terrorism matters to the Department on a monthly basis.

The monthly domestic terrorism reports have unveiled a pervasive problem across the country. While the major terrorist attacks such as the World Trade Center and the Murrah Federal Building are the most visible and massive evidence of terrorism, they do not provide the complete picture of terrorism in the United States. The monthly domestic terrorism reports reflect that anti-government militias, tax protestors, and hate groups are becoming more and more visible and active across the United States. Currently, there are approximately 234 active domestic terrorism investigations or prosecutions pending in districts across the country.

Anti-government militia can be found in nearly every state. These groups arm themselves, hold training emphasizing military type maneuvers and often defy the laws of the federal, state and local jurisdictions. In addition, some anti-government groups fund themselves by concocting schemes to defraud banks or other innocent victims.

International terrorism is also a very real threat. In 1994, the FBI reported the emergence of radical international terrorist groups with an infrastructure that can support terrorist activities. These groups are more difficult to infiltrate, and consequently, it is also more difficult to predict and interdict their attacks.

An effective strategy to combat terrorism must include the involvement of prosecutors in the investigative stage. Aggressive investigations could prevent terrorism from occurring or could limit the extent of the harm caused by the terrorism. Regardless of whether the terrorism activity involves a white collar fraud scheme or an act of violence, prosecutors can and should play a role in the investigation.

Depending on the nature of the criminal activity, the prosecutor may be involved in any number of investigative functions: conducting a grand jury investigation; obtaining court orders for pen registers or trap and trace devices; obtaining court orders for Title III's, which would include drafting or reviewing affidavits, filing required reports with the court, and monitoring the progress of the Title III; reviewing consensual tape recordings; advising investigative agents on which direction an investigation should take; and obtaining search warrants, arrest warrants, and indictments. Prosecutors and investigators must work hand in hand, or we will not be successful in our efforts to defeat domestic terrorism.

The Department has undertaken a coordinated strategy to establish procedures for responding to critical incidents and to provide training. In May 1996, the Department established standard procedures to follow should a critical incident occur. Such critical incidents could include acts of terrorism, hostage/barricade situations, acts of civil disorder, and other critical incidents.

During FY 1996, the Department established the Attorney Critical Incident Response Group (ACIRG). The ACIRG is comprised of prosecutor-managers from the offices of the Attorney General, the Deputy Attorney General, the Criminal Division, the Civil Rights Division, and the EOUSA. In addition, line prosecutors were chosen to participate in the ACIRG. When a critical incident occurs, the Attorney General and Deputy Attorney General can select attorneys from the ACIRG to form a team to assist in responding to the critical incident.

During FY 1997, the EOUSA, in conjunction with the Criminal Division's Terrorism and Violent Crime Section and the ACIRG, will host two seminars to train Assistant United States Attorneys from each United States Attorney's office and attorneys from the Department's Investigative Division. Training will include critical incident response, investigation of terrorism, and prosecutive terrorism. Each United States Attorney's office will be assigned to investigate and prosecute terrorism in the district and to instruct each district and affected litigating division on the Department's Critical Incident Response Plan. Approximately 120 attorneys will attend the four day training sessions.

Terrorism cases consume significant resources in United States Attorneys' offices. Until now major terrorist incidents have been handled on an ad hoc basis with whatever existing resources could be obtained. Our experience with three of the most visible cases provides insight into the extent of resource consumption and the way in which resources were obtained:

- World Trade Center Bombing. The Southern District of New York prosecuted this case by reassigning existing resources, primarily from the organized crime program. Eight trial lawyers, two additional attorneys doing legal work, two paralegals, and four secretaries were dedicated to work on the two cases which resulted from this bombing.
- Oklahoma City Bombing. Resources from around the country were sent to the Western District of Oklahoma for the investigation and prosecution of this case. Seventeen United States Attorney personnel including six attorneys have been dedicated to the prosecution of this case. Throughout the investigation, Assistant United States Attorneys advised the agents working on this investigation and sat side-by-side in the Command Post. In addition, non-personnel costs of \$2.457 million in FY 1995, and \$2.592 million in FY 1996, were expended in this case.

• Freeman and the Unabomber. The District of Montana estimates that during FY 1996, it expended the following resources on domestic terrorism cases: four attorney WY for the "Freeman-related" cases; one attorney WY for the "Unabomber" case; and, four support WY. Again, Assistant United States Attorneys were active participants with the agents throughout the investigation of the Freeman-related cases. For FY 1997, they anticipate a 25 percent increase in the resources devoted to these cases. The District used some of its own resources and also received assistance from the Criminal Division to prosecute these cases.

Responding to these large scale attacks requires more than merely sending attorneys to the site of the incident. In response to the Oklahoma bombing, it was necessary to obtain space to set up a command center, obtain and install the equipment, communications, and furniture needed to operate the center, and move the people to the site. Also, these cases often involve large numbers of victims, or families of victims, who must be provided assistance and kept informed of the progress of the case. These needs must be addressed.

Terrorism cases frequently generate spin-off cases, where information gathered during one investigation leads to a completely separate investigation and prosecution. For instance, the Freeman case is not confined to Montana. There are many other related cases that are being prosecuted by other districts.

The Antiterrorism and Effective Death Penalty Act of 1996 broadened the prosecutorial reach of United States Attorneys. Among other things, the Act provides significant new criminal jurisdiction directed at international terrorist acts which occur in the United States and at activities undertaken by citizens of international terrorist organizations. The Act also broadens the jurisdiction of United States Attorneys to include domestic terrorism by adding statutes that increase the protection afforded federal workers and that expand the law relating to explosives; make significant changes to existing restitution law, placing a greater responsibility upon United States Attorneys' offices to seek and collect restitution for victims of crimes. These new responsibilities, though completely welcome and necessary to fight terrorism, will consume existing limited resources.

The investigative agencies have resources assigned to counter-terrorism programs. The FBI has 12 Joint Terrorist Task Forces (JTTFs), with another one scheduled to be formalized in the near future. These JTTFs incorporate federal, state, and local law enforcement to combine resources, and work more efficiently against international and domestic terrorists. According to their FY 1998 budget spring request, the FBI Domestic Terrorism program has a base of 208 workyears. Based on data through April, 1996, approximately 345 agent workyears will be utilized in FY 1996.

The FBI has reallocated agents from other programs to the terrorism program. Some of these resources were reallocated from counter-intelligence programs that did not have a significant impact on the United States Attorneys' workload. Now that these resources are devoted to the terrorism program we are beginning to see the impact on United States Attorneys' workloads.

The Omnibus FY 1997 Appropriations Act, enacted on September 30, 1997, provides significant resources to the FBI for counter-terrorism initiatives. No increases for prosecutors were provided for Counter-Terrorism. The Act includes 587 additional FBI agents for enhanced counter-terrorism investigators to establish and equip a center to identify, investigate, and counter illegal electronic intrusion into government computer

networks and the national information infrastructure. These investigations will yield a significant workload for the United States Attorney. The United States Attorney will be able to provide the form of prosecutors and support staff to respond to the increased activity generated by the additional FBI personnel and resources.

The United States Attorneys cannot continue to address terrorism cases on an ad hoc basis. The growing threat of terrorism requires that dedicated resources be available to investigate and prosecute these cases without interrupting or harming other important programs or investigations. As the lead federal law enforcement official in a district, the United States Attorney must take a more proactive role and work with the federal, state and local law enforcement agencies in developing coordinated and cooperative strategies to address terrorism.

NARCOTICS AND DANGEROUS DRUGS		
Criminal Decision Unit		
Perm.	MY	Amount
FEBL		
56	28	\$5,161

The United States Attorneys are requesting 56 positions (37 attorney), 28 MY, and \$5,161,000 in support of our Narcotics and Dangerous Drugs program. These resources will reduce the availability and abuse of illegal drugs through traditional and innovative enforcement efforts.

President Clinton's The National Drug Control Strategy, 1995, discussed the important achievements that have been made in this nation's war against drugs, however, guarded optimism was also expressed. The strategy specifically expressed concern over the rise in popularity of methamphetamine and the expansion from regional usage into other areas of the country. Methamphetamine abuse has increased substantially in the last few years. The number of emergency room episodes involving methamphetamine tracked by the Drug Abuse Warning Network increased over 750 from 1991 through 1994. The abuse of methamphetamine will replicate crack cocaine abuse in devastating ways. An estimated four million persons in the United States have used methamphetamine at least once in their lives.

The Department's strategy on narcotics includes the following: to continue to direct Federal investigative and prosecutorial resources toward drug trafficking organizations that are international or multi-jurisdictional in scope; to honor the commitments we have made to other nations to combat the international drug trade; and, within the United States, the federal government is in the best position to coordinate and implement attacks against large international drug organizations, such as the Cali Cartel.

On April 29, 1996, the President announced the Administration's National Methamphetamine Strategy. This Strategy addresses the methamphetamine problem through diverse approaches, including law enforcement efforts, international cooperation, environmental protection and public awareness and education. The trafficking and abuse of methamphetamine is a growing national problem.

The United States Attorneys' offices will continue to play a significant role in the strategy to combat the spread of this drug by pursuing trafficking organizations, especially violent ones, and those who operate the dangerous and clandestine laboratories that manufacture methamphetamine. Their primary focus is on

high-level targets who are also involved in significant money laundering and other organized criminal activities. The United States Attorneys continue to work with law enforcement agencies to identify drug traffickers and the methods they use to bring methamphetamine into this country from Mexico.

As an initial step in implementing the national strategy, United States Attorneys are meeting with federal, state and local law enforcement leaders and public health officials to address the methamphetamine problem. This will involve assessing the threat of methamphetamine in their districts. If such a threat exists, they will develop a comprehensive plan to attack the threat through a combination of law enforcement efforts, education and public awareness.

The United States Attorneys devoted substantial resources to the prosecution of all drug cases during FY 1996. All drug prosecutions consumed 29.7 of all criminal workyears. Non-OCDETF drug prosecutions consumed 13.7 percent of criminal workyears.

A total of 8,992 cases were filed against 15,837 drug defendants--a 5.6 percent increase in cases filed over FY 1995. These cases represented 37.5 percent of all criminal cases filed during FY 1996. The average number of cases handled per attorney workyear increased from 43.9 in FY 1993 to 49.3 in FY 1996. The average number of defendants handled per attorney workyear increased from 81.2 in FY 1993 to 90.5 in FY 1996. The average number of drug defendants in matters received handled per attorney workyear increased from 82.7 in FY 1993 to 88.2 in FY 1996.

Of all drug defendants whose cases were terminated during FY 1996, 86.7 percent were convicted, an increase over the FY 1995 rate of 85.2 percent. Of those convicted, 88.3 percent received prison sentences. Of these, 65 received life sentences. Of the 11,063 defendants sentenced to prison, 4,290, or 38.8 percent, were sentenced to five years or more. In addition to the drug numbers just cited, 1,101 cases filed against 2,246 violent crime offenders during FY 1995 also included drug charges. It must be understood that, now, more than ever before, there is an overlap of criminal activities in the cases handled, such as with drugs, gun, gang, and violent crime. This overlap is particularly evident in non-OCDETF drug cases. During FY 1996, 16,614 in FY 1996 to 7,292 in FY 1998. Total projected non-OCDETF referrals, as stated by agencies who anticipate referrals in this area, are estimated to grow from 13,950 in FY 1996 to 14,855 in FY 1997, and up to 16,265 in FY 1998. This constitutes an increase of 16.6 percent from FY 1996 to FY 1998.

Based on the United States Attorneys' case management system data and information provided by federal client agencies that generate referrals in this area, the number of drug matters to be referred to the United States Attorneys will steadily increase from FY 1996 through FY 1998. The workload of drug cases to be addressed in FY 1998 is projected to increase 22% over the FY 1996 workload (for non-OCDETF drug trafficking).

This request is tied to the enhancements approved by the Attorney General for the FBI and DEA. The FBI is requesting 50 Agents for its drug initiative and the DEA is requesting 12 Agents to combat the increased usage of heroin, and 60 Agents to disrupt the expansion of methamphetamine throughout the country. The resources requested in this area are critical to the success of the national strategy. In addition, the resources requested in the national strategy are necessary for the United States Attorneys to ensure that they can meet the mandates of the President's National Drug Control Strategy. Strategy on drugs.

VICTIM-WITNESS ASSISTANCE
Criminal Division Unit

Perm. Pos.	NY	Amount
134	67	\$10,488

The United States Attorneys are requesting 134 positions, 67 NY, and \$10,488,000 to support the mandates of the Attorney General's Guidelines for Victim and Witness Assistance, 1995. The request consists of five elements which are discussed in the paragraphs below.

National Notification System

The United States Attorneys are requesting \$1 million for the development of a nationwide victim notification system. Notification of victims and witnesses of the events of a case is the most rigorous and time-consuming step in the process. A survey of the notification systems currently employed in the United States Attorneys' offices disclosed that none are adequate for expansion to a nationwide system. Therefore, the development of a nationwide victim notification system will streamline the process and is a cost-efficient approach to ensure that the victims of crime throughout the nation are notified of events in their cases.

The cost estimate of \$1 million was reached after consultation with a company that is currently implementing this system at the local level. The estimate includes system development, implementation and training.

Additional 52 Victim-Witness Coordinators

The role of Victim-Witness Coordinators has greatly expanded with the rapidly moving continuum toward comprehensive rights and services for all victims of crime. The initial legislative response to the growing needs of victims and witnesses was to provide services to crime victims where possible. Subsequent legislative acts required that services be provided, and a federal Crime Victims Bill of Rights was created. Currently, there is a proposed Constitutional amendment for victims' rights pending in both the House and the Senate. If enacted, this would guarantee a wide array of rights and services to all victims of crime.

The Victim-Witness Coordinator in each United States Attorney's office establishes procedures for compliance with the mandates of the Attorney General's Guidelines, and the Coordinator will ensure that systems are in place to identify and notify victims. It is not possible for Coordinators to become actively involved in each criminal case having a victim. However, they do become actively involved in all serious violent crime matters and massive fraud cases. They are responsible for ensuring that victims receive the rights to which they are entitled and for managing the witnesses in cases.

The number of victim and witnesses in federal cases has increased dramatically as criminal provisions have expanded to such issues as securities fraud, telemarketing fraud, and domestic violence. This increase will continue as fraud initiatives such as Seniors Against Marketing Scams are initiated. Prosecutions involving children as victims or witnesses are the most time-intensive and have very special requirements. In each

case, the child must be provided consultation with a multi-disciplinary team alternatives to in-court testimony/ competency examinations; privacy protection; a closed courtroom if necessary; a victim impact statement; a guardian ad litem; an adult attendant; a speedy trial; and testimonial aids.

Many white collar cases involve thousands of victims. For example, the Southern District of Texas is preparing to prosecute a telemarketing fraud case involving 29,000 victims, and the District of Nevada's Senior Sentinel Telemarketing Case involved 3,500 victims. Each of these victims must be notified of any changes in case status, i.e., arraignment, plea, verdict and sentencing. Each victim also must be given the opportunity to submit a victim impact statement or testify at sentencing. The Victim-Witness Coordinator must maintain files concerning mandatory restitution.

The Oklahoma City bombing case is a prime example of the resources required for advocacy in a multi-victim case. The United States Attorney's office for the Western District of Oklahoma expanded its Victim-Witness Assistance Unit from one to six full-time employees in order to provide services to the 2,000 victims registered in the database. It is important to note that of the 166 people who were directly affected by the bombing, 150 were injured, and 150 others were also victims of the crime. Victims of crime are not just the individuals who are killed, injured, or threatened. They are also the families of those victims, the businesses that are ruined, and the financial institutions that suffer financial loss.

In addition to the primary responsibility of attending to the needs of victims and witnesses, Victim-Witness Coordinators must involve themselves in victims' issues by participating in organizations and serving on committees that advocate victims' rights. They must also develop relationships with victim service resources in their districts for the purpose of making referrals. In addition, they frequently are called upon to provide victim and witness assistance training to federal, state, and local law enforcement personnel within their districts.

Coordinators in districts having jurisdiction over military installations, Indian reservations, and the District of Columbia are particularly burdened by their caseloads. As allocations for attorney personnel continue to be requested, investigative and protective efforts in these areas, advocates for victims must be included in the equation in order to lessen the gap between the need for services and available resources.

A recent study by the National District Attorneys Association and the National Organization of Victim Assistance estimates that compliance with current mandates would require one victim advocate/coordinator for every six prosecutors. When you apply this standard to United States Attorneys' offices that have a high incidence of violent crime and crime involving children, it is evident that the federal government is far from meeting this requirement. For instance, the United States Attorney's office in the District of Columbia has one victim advocate/coordinator for every 66 attorneys.

Additional 82 Victim Advocates

In order to facilitate a full-service victim-witness program, an additional 82 support personnel will be needed to handle such responsibilities as the entry and maintenance of victims into the notification system database, witness management, and trial coordination. These individuals will assist in the consultation of victims; coordination of victims' attendance at hearings and/or judicial proceedings; involving victims in allocation hearings; and the management of victims and witnesses during the course of the case.

These individuals will free the Victim-Witness Coordinators to serve as true advocates in the districts, and involve themselves to a greater extent in the evolution of victims' issues by participating in organizations and committees that advocate victims' rights. The Victim-Witness Coordinators will also have increased opportunities to develop relationships with victim service resources in their districts for the purpose of making referrals to victims.

The 82 victim-witness advocates would be responsible for the routine administrative work including courtroom scheduling arrangements, travel and housing of witnesses, and notification of victims.

Contract Support

Funding of \$400,000 is requested to support contract assistance to address extraordinary needs in the offices. Specifically, in cases where the Victim-Witness Coordinators are pulled from the normal day-to-day responsibilities of the district, funding is requested to provide for temporary support assistance for the office to handle routine witness responsibilities to ensure the program is maintained.

Funding is requested to support the use of approximately 10 temporary contract personnel in the program.

The funding for the contract personnel will be administered by EOUSA's LECC/VW Staff and will respond to extraordinary needs of the Offices of the United States Attorneys.

Conservation from National Finance Center Plan of Action

Funding of \$1,279,000 is requested to address the immediate need to replace existing collections systems. Recently, the National Fine Center concept was abandoned by the Administrative Office for the U.S. Courts; currently they plan to develop district-based systems. It is unlikely that these systems can be developed and deployed within the next 18 months. Additionally, the PACON system's implementation continues to be delayed. While PACON offers an alternative interim approach to criminal debt collections, there are no guidelines that the Debt Collection Management Office will be able to meet the optimistic goal of beginning implementations in the near future.

Finally, 42 of the largest United States Attorneys' offices currently use case management systems running on minicomputers installed between 1983 and 1987. These case management systems, known as PROMIS and USACTS-II, lack the flexibility and enhancements incorporated in later case management systems, and cannot be upgraded to respond to new initiatives or requirements, including the Year 2000. The last significant

hardware upgrades for these systems occurred in 1989. Repair parts, replacement components, and qualified service technicians are becoming increasingly hard to find. As a result, the hardware has become unreliable and major system problems are more commonplace.

The goal of this project is to develop an interim system using the TALON software as the base, which can be installed in all United States Attorneys' offices as soon as possible. At the same time, the Executive Office's Central Collections System must be updated and modernized.

The TALON software is currently used in 52 United States Attorneys' offices. While the software and platform are state-of-the-art, the application itself is outdated due to changes in the environment in which Financial Litigation Units operate. Because it was to be replaced, the TALON software has not been upgraded to include changes in the law and procedures.

The TALON software will be used as the baseline for a new system, but will be updated to include those changes considered critical to meeting operational and reporting requirements. Once these changes have been identified through a requirements study, the system will be programmed, the data now in PROMIS, USACTS-II and TALON will be converted, and systems managers and users will be trained.

In light of the need for rapid development and implementation of this system--which is designed to serve as an interim system for an indefinite period--the oversight of this project will be made to limit the amount of time to be spent on the development of the system. The oversight of the district's financial litigation function will be centralized in the Department of Justice, and the reporting of collections activities will be fully operational and in place as quickly as possible because of the potential for hardware and software failures in districts with outdated systems.

If this funding is received, it will allow the United States Attorneys to uphold the rights of, and improve services to, America's crime victims, and promote the participation of crime witnesses throughout each stage of criminal and juvenile justice proceedings at the federal level.

ORGANIZED CRIME	Perm.	WY	AMOUNT
Criminal Decision Unit	FOIA		
	41	21	\$3,779

The United States Attorneys are requesting 41 positions (27 attorneys), 21 WY, and \$3,779,000 in support of the Organized Crime program. Our request supports the requested enhancement for the FBI for Organized Crime as well as the Five Year plan for Operation "Heaven's Gate."

The term "organized crime" covers domestic crime groups such as La Cosa Nostra (LCN), but also includes among others, emerging Asian and Russian criminal organizations. If history is any guide, brutality in ethnic communities, if left unchecked, portends the development of more sophisticated crime once these groups sink roots into businesses falling under their control.

La Cosa Nostra remains the foremost organized criminal threat to American society. According to the FBI, there are an estimated 1,200 LCN members and many additional associates nationwide. The center of LCN activity continues to be New York where the Bonanno, Colombo, Gambino, Genovese, and Luchese Families dominate racketeering activities. Current investigations indicate that affiliates of these enterprises are involved in gambling, loansharking, murder, extortion, robbery, hijacking, drug trafficking, gasoline excise tax evasion schemes, telemarketing, and various white collar frauds. The LCN also continues to derive considerable wealth and influence through their domination of the major labor unions and their control over the construction, gaming, maritime, carting, convention center, and garment industries.

In recent years, the FBI has achieved unprecedented success against the LCN. However, according to the FBI, the institutional structure and established criminal network of the LCN remains intact. In fact, less than 10% of identified LCN members have been removed from the ranks of the LCN. Additionally, the FBI has recently learned that information indicates that the Bonanno, Colombo, and Genovese Families have recently indicated or are seeking to induct over 70 new members. Likewise, investigative and intelligence information indicates that LCN families nationwide that were seriously damaged by law enforcement prosecutions are beginning to rebuild their criminal enterprises.

The FBI has implemented an initiative called Operation "Heaven's Gate", which is a five year strategic plan to further reduce the LCN's influence in a variety of industries. Intelligence will be collected, collated, and analyzed utilizing the FBI, intelligence community, and other federal, state, and local information. The goals of "Heaven's Gate" include: significantly reducing the leadership, national influence, and membership of the largest and most powerful families in the LCN's criminal empire; reducing the membership of all other LCN families located in 20 additional U.S. cities through the seizure of assets, special enforcement actions, and through direct investigation of their influence in unions and the previously identified industries; and creating task forces comprised of appropriate federal, state, and local agencies who have investigative jurisdiction and reported to the FBI nationwide. The Attorney General is supporting an increase of 28 FBI agents for this initiative in FY 1998.

In 1993, the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs of the United States Senate reported that: "Over the past decade, there has been a substantial increase in Asian organized crime activity in the United States." Today, Asian criminal groups represent a problem of dramatic proportions, both in the United States and internationally. In FY 1989, the FBI reported 77 Asian criminal enterprise cases open; in FY 1993, the number had increased to 220; and, in FY 1995 the number was 242.

Since 1993, Americans have witnessed appalling incidents where illegal Chinese aliens have jumped to their deaths off a smuggling boat in Long Island Sound or have been kidnapped, raped, and tortured in secret holding areas in metropolitan New York City. According to the New York City Police Department, there were no Asian kidnappings prior to 1990. By 1995, more than 50% of the kidnappings in New York City were committed by Asian criminals.

In the Western District of Washington, Asian Organized Crime families have been identified as participating in gambling, prostitution, and illegal narcotic trafficking. Prosecuted recently was a five defendant kidnapping case involving members of the "Snakeheads" Asian Gang. The gang members were also involved with similar kidnappings in Los Angeles and New York City. The Western District of Washington anticipates that as Hong Kong is taken over by mainland China, organized crime will shift to our West Coast.

Russian Organized Crime is a problem that has dramatically increased in the United States. Underground criminal gangs tough enough to have survived the Soviet regime have now surfaced and brazenly extorted control of hundreds of banks and businesses in the Newly Independent States of what used to be the Soviet Union.

While much of "organized crime" in Eastern Europe is of the leg-breaking type, there is definitely a criminal element, especially in Moscow, sophisticated enough and with the right political connections to have transferred billions of dollars of stolen, extorted, and laundered funds from the Newly Independent States into Western banks and businesses, especially in the United States.

In addition, there are Eastern European communities in the United States that have their own traditions of forms of extortion, drug trafficking, loansharking, and fraud. These communities offer perfect havens to major league criminals arriving from Eastern Europe.

It is estimated that 29 Eurasian organized crime groups based in the Newly Independent States operate in the United States, including seven mega-groups based in Moscow. Three of these seven Russian groups are present in New York City, where Eurasian/Russian organized crime is most prevalent. There is also significant Eurasian crime activity in New Jersey, southern Florida, and along the west coast.

In their 1994 organized crime assessments, eight United States Attorneys reported significant Eurasian ("Russian") organized crime activity. This is a big jump from 1992, when "ROC" was reported as significant only in New York state.

The Deputy Assistant Director for the Office of Investigations of the United States Secret Service (USSS), testifying on February 28, 1996, to the U.S. House of Representatives Committee on Banking and Financial Services discussed a Nigerian criminal network. He stated that a Nigerian criminal network has been in place for over the past ten years. Currently, the most prolific fraud scheme being perpetrated by Nigerian Organized Criminal groups is what is known as advance fee fraud. Nigerians, purporting to be officials of their government, banking system, or oil import/export companies, mail or fax letters to individuals and businesses in the United States enticing citizens to partake of million dollar windfalls by responding with personal identifiers such as social security numbers, bank account numbers, and phone numbers. The USSS has a database containing over 20,000 entries of people contacted or victims. A task force consisting of the United States Attorney's Office, United States Postal Inspection Service, and the USSS has identified a large interarchical organized crime network dedicated to advance fee fraud. The network has been estimated to have generated fraud losses of over \$1 billion. Twenty-one members of the conspiracy have been indicted. Estimated potential losses range in the tens of millions for this organization alone.

Prosecution of organized crime cases in the Federal venue offers investigative and litigative benefits that include: long term surveillance; jurisdiction crossing state lines; condensed recording; the Witness Protection Program; and, favorable Federal immunity statutes.

Organized Crime referrals continue to increase. Referrals increased from 383 in FY 1993 to 465 in FY 1996, an increase of 21.4 percent. Cases filed increased by 26 percent from FY 1994 to FY 1996, while defendants increased by 33.5 percent. The conviction rate for FY 1996 was 86.6 percent.

Between FY 1992 and FY 1995, there was an average of 3.1 defendants per case filed. In FY 1996 there were 3.9 defendants per case filed. This was the highest average of any major criminal program category, and is approximately twice the average for all criminal cases, which was 1.52. For those cases which proceeded to trial, there was an average of 6 defendants per case tried.

The workload per Organized Crime Assistant United States Attorney continues to increase. During FY 1996, there were 4.2 Organized Crime cases handled per attorney workload, up from 3.8 in FY 1995, and 3.1 in FY 1994. There was a 32.5% increase in cases handled per workload from FY 1994 to FY 1996.

There was a corresponding increase in the number of defendants handled per workload, which increased from 9.8 defendants per workload in FY 1994, to 11.6 in FY 1995, to 13.2 in FY 1996. The defendants handled per attorney workload increased by 37.7 percent from FY 1994 to FY 1996.

The requested resources will allow us to dismantle the operations of organizations tied to Organized Crime in the United States; assist other nations with the disruption of Organized Crime Groups that operate in the United States and abroad; and, support task forces formed to eliminate Organized Criminal Enterprises.

	Perm.	FY	Amount
CIVIL DEFENSIVE LITIGATION			
Civil Decision Unit	115	58	\$9,140

This initiative requests 115 new positions (44 attorneys), 58 FY, and \$9,140,000 in support of civil defensive litigation in the United States Attorneys' offices to improve the defense of the United States against certain monetary claims, and protect the financial interests of the United States through the assertion of the Federal Government's commercial interests in defensive litigation.

The United States Attorneys' offices defend lawsuits filed against the United States, its agencies, and employees. The attorney workyears devoted to this type of litigation have increased 25 percent from FY 1993 to FY 1996. Additionally, the civil defensive cases being litigated are becoming more complex. This is evidenced by the increase in expert witness fees expended and increased disbursements from the Judgment Fund.

The civil defensive caseload handled by the United States Attorneys' offices has increased by 8.3 percent from FY 1993 to FY 1995 and includes:

- Prisoner litigation (challenges to sentence under 18 U.S.C. 2355, habeas corpus, mandamus, civil rights, torts, and miscellaneous proceedings).
- Discrimination cases (employment discrimination cases arising under Title VII on the basis of race, sex, color, religion or national origin, and other cases pursuant to the Americans with Disabilities Act and the Age Discrimination in Employment Act).
- Tort cases pursuant to the Federal Tort Claims Act (medical malpractice cases, automobile accident cases involving federal employees, slip and fall litigation, and other miscellaneous torts).
- Certain contract actions.
- Litigation arising from the Privacy Act and the Freedom of Information Act.
- Immigration cases.
- Social Security Appeals.
- Bivens cases (cases against individual federal employees for constitutional torts).

The United States Attorneys have no discretion and must represent the United States when it is sued under the various statutory remedies available to the public. This litigation consumes significant resources.

Despite experiencing a large increase in both the complexity and number of civil cases within the last several years, the caseload has been comparable to the increase in litigation resources for civil defensive litigation. While the civil defensive workload is already increasing significantly, statutory changes are and will continue to prompt extraordinary needs for United States Attorneys' offices to keep pace with the litigation demands in prisoner litigation, discrimination actions, and certain tort cases.

Civil defensive litigation attorney workyears increased 32 percent from FY 1993 to FY 1996 (FY 1996 figures represent a projection). The corresponding 8.3 percent increase in civil defensive cases (excluding foreclosure) is primarily the result of the enactment of new legislation which provides additional judicial remedies to various groups of potential plaintiffs.

If these complex actions against the United States are to be resolved promptly and justice is to be served for both the litigants and the United States, additional resources will be needed. The three critical areas that will require additional resources in FY 1998 are discussed below.

1. PRISONER LITIGATION

Violent crime, drug trafficking, and white collar crime initiatives have been priorities for the last several years. Legislative and executive programs implemented to address these problems include the Sentencing Guidelines, Triggerlock, SafeHomes, career criminal initiatives, and the Omnibus Crime Bill. These efforts have resulted in significant increases in criminal prosecutions (in FY 1996, the United States Attorneys Annual Statistical Report indicates that USAOs filed 38,750 criminal cases against 58,141 defendants, a 4% increase in cases filed, and a 2% increase in the number of defendants filed against over FY 1995) and concomitant increases in incarcerations. United States Attorneys' civil divisions have been impacted by a resulting significant increase in prisoner litigation.

The nation's federal prison population has risen with the inception of the federal sentencing guidelines from 36,001 in 1984 to 105,463 in 1996. The Bureau of Prisons (BOP) projects a total prison population of 140,613 by year 2005, an increase of 31.3 percent. By FY 1998, the BOP projects an inmate population of 117,252, a 11.1% increase over 1996. These increases will necessitate the construction of additional correctional facilities in a number of districts. Six new facilities are expected to open in 1996 with 16 other facilities opening between 1998 and 2000. By 2000, the BOP expects to add an additional 25,000 beds to its various facilities, and 3,000 more by the year 2001.

As the prison population and the numbers of facilities increases, a steady increase in civil suits filed by prisoners in federal facilities is occurring that shows no potential for decline. These cases include 2255a (challenges to sentence), habeas corpus, mandamus, civil rights, torts, and miscellaneous proceedings. In fact, there has been a 59.04 percent increase in the number of challenges to sentencing since FY 1987. When a court action is filed by a prisoner against the United States, the USAOs have no discretion and must defend or resolve the matter even in what may appear to be the most trivial or frivolous suit (e.g., lost commitment and medical records, denial of visitation, etc.). These suits are often filed by prisoners on constitutional issues that are not readily amenable to disposition and demand significant attorney and paralegal resources. Complex cases brought by prisoners include Bivens actions as well as medical malpractice, religious freedom, and second-hand smoke cases that require significant litigation resources.

The projected increase in prison population between now and 1998 is 14,460. The Administrative Office of the U.S. Courts (AOUSC) reports that for every 1,000 prisoners, approximately 97 new prisoner cases are filed. This ratio was calculated on studies of prisoner petitions from 1940 to 1995. Thus, the projected increase in prison population will likely result in an increase of over 1,400 new cases filed by 1998. These cases can be expected to include the full range of civil defensive matters described above.

Much of this work is paper intensive and the United States Attorneys' offices rely heavily on paralegal support in order to maintain efficiency. Therefore, the United States Attorneys are requesting a resource increase of 23 paralegal positions to handle the increase in cases. The new paralegals for defense of civil prisoners would be added to the existing staff of 23 paralegals for prosecution. Population and additional facilities by FY 1998. We will then calculate the impact on the workload of the existing staff of the added paralegal support and make a determination on whether to request additional resources to handle the prisoner petitions.

2. EMPLOYMENT DISCRIMINATION LITIGATION UNDER TITLE VII

Significant changes in Civil Rights legislation have increased both the number and the complexity of employment discrimination cases handled by the USDOs. In November, 1991, Congress enacted substantive amendments to Title VII of the Civil Rights Act of 1964 (P.L. 87-42, U.S.C. § 2000e, et seq.). The 1991 legislation for the first time allows plaintiffs to recover compensatory damages up to \$100,000, no longer limiting awards to past and prospective lost wages. The Act also provides for the right to a jury trial.

The 1991 Amendments will significantly impact United States Attorneys' offices. Employment discrimination cases will require more time-intensive jury trials with an expanded potential for much higher damages. This translates into more resources expended on each case.

The number of Assistant United States Attorney workyears devoted to defensive monetary cases (the category into which employment discrimination cases fall) clearly reflects this increase. Defensive monetary cases consumed 32 percent of all attorney workyears devoted to all civil cases in FY 1992. That percentage has risen to 40.1 percent of the civil case workload. United States Attorneys' offices report that these increases also absorb additional attorney, paralegal, and support staff in order to meet the growing demands of the employment discrimination caseload.

In addition to more time being spent on these increasingly complex cases, the actual number of cases has increased and the affected workforces have grown. From FY 1992 through 1995 the number of cases filed increased by 28.95 percent. The AUSA reports that in FY 1994 there were 1,097 employment discrimination cases in which the United States was a defendant while in FY 1995 there were 1,275 such cases. These figures are reported at Table C-2 Judicial Business of the United States Courts 1994 and Judicial Business of the United States Courts 1995, hereinafter cited as "US Courts 1994" and "US Courts 1995" respectively.

Furthermore, several agencies expect to see an increasing number of employment related cases due to the statutory changes or as a result of government downsizing. The Office of Personnel Management reports that, in FY 1995, there were 7,352 Reductions-in-Force in all agencies, and in the first quarter of FY 1996, there were 1,639. The Department of the Army reports that since the passage of the 1991 amendments to the Act, there has been a substantial increase in the number of Civil Rights and employment related cases. The Act continues the threat of increased litigation in the number of Civil Rights and employment related cases. Affirmative action cases due to budget constraints and reorganization. The Department of Veterans Affairs also projects an increase in the number of Title VII and labor related cases due to Reductions-in-Force and federal downsizing. Whenever jobs are lost or employment responsibilities undergo a downward shift, the likelihood of allegations of discrimination increases.

The downsizing of the federal workforce also affects the impact of these cases by reducing agency resources to assist in their preparation and defense. As the number of agency counsel declines, the availability of agency counsel to assist in investigation and case preparation also declines.

United States Attorneys' offices will require additional resources to handle employment discrimination cases. Analysis of AODSC statistics and the EOPHA statistical report reflect an additional 230 new cases can be expected each year. By 1996, the United States Attorneys' offices can be expected to be handling 690 new cases.

3. TORT LITIGATION

The largest component of defensive litigation is tort litigation with over \$300 million in disbursements from the Judgment Fund in 1994. Of that, \$135 million represented payouts in medical malpractice cases. Historically, United States Attorneys litigated primarily medical malpractice cases brought by federal prisoners and by veterans and military dependents originating in Veterans Administration and military medical facilities. Military downsizing is not expected to have a significant impact on these cases since the majority of the military cases have been those involving veterans treated by the Veterans Administration. The prisoner cases should increase with the prison population. These cases have already caused a significant burden on United States Attorneys, but new legislation will dramatically increase the medical malpractice caseload.

The federally supported Health Centers Assistance Act of 1992, 42 U.S.C. §213 (the "Act") provides that Health and Human Services (HHS) supported community health centers, hospitals, clinics and other health facilities, their employees and contractors, will be considered employees of the Public Health Service entitled to Federal Tort Claims Act protection as the exclusive remedy for a tort resulting from the performance of their medical services. Similarly, at 42 U.S.C. §450f, Congress extended Federal Tort Claims Act coverage to Indian tribes, tribal organizations, Indian contractors and their employees for certain common law torts including medical malpractice torts at Indian health centers. This legislation, which was originally enacted for a three year trial period, has now become permanent.

The impact of this legislation will not be fully felt for a while due to provisions causing parties to comply with certain administrative proceedings prior to filing suit. At the present time, only a trickle of the expected flood of cases has been felt. From January 1993 through May 1995, only 89 cases were filed nationally. Before the Act, providers could file a lawsuit directly with the Federal Tort Claims Act and HHS Service (HHS) in a complex, lengthy process. HHS has taken considerable time to establish procedures for processing the applications. Only cases based on activities occurring after the deeming process are covered by the Act. Once a provider is deemed, a claim must be filed with HHS, and the plaintiff must wait at least six months before filing a lawsuit in District Court. Because of these delays, we have just seen a few of the cases, but the rate is beginning to increase dramatically. While national statistics after May of 1995 are not available, reports from districts indicate that the expected caseload increase is beginning to appear and will hit with full force by FY 1998.

HHS deemed approximately 630 Community Health Centers nationally through 1995. While there are no detailed descriptions of these providers on a national basis, some examples from the Central District of California are instructive. The largest provider in that district, Watts Health Foundation, has over 40,000 patients with 200,000 patient encounters per year. Another foundation in the district has over 50,000 encounters per

year with a pediatric practice handling 1200 births per year. This same clinic serves as the primary health provider for 16,000 homeless. Finally, the Los Angeles County health system is converting one-third of its practice from a hospital setting to outpatient clinics to qualify for over \$300 million of funding from HHS.

In analyzing the impact of the number of cases on USOs, the nature of these cases and their resource requirements are significant. In any medical malpractice case, medical and rehabilitation experts are needed to litigate issues of liability and the extent of physical damages. Economists and actuarial experts are then often needed to calculate economic damages. The need for these experts translates into greater expense and greater potential exposure for the United States.

The cases arising under the Act, however, are expected to be more resource intensive than the historic government medical malpractice case for two reasons. First, the typical patient populations at most community health centers and Indian health centers tend to be poorer populations with all of the underlying health problems generated by lack of consistent well care, including good prenatal care.

Second, in cases involving federal employees and federal institutions, USOs normally rely on the agency and agency counsel to investigate the claim, provide a litigation report, and assist in litigation by helping in the discovery process. This type of agency litigation support will be unavailable in the environment where the individual provider is exposed. Moreover, HHS does not have the same powers to investigate claims in these cases as it would in cases involving agency facilities and employees. Finally, HHS does not have sufficient legal staff to assist in this litigation. The consequence for the United States Attorneys' offices will be a need to devote more time to cases filed under the Act than would be required in the more traditional government medical malpractice case. In order to adequately defend these cases, more resources are necessary.

As the number of community health center cases increases, the United States Attorneys' offices expect a significant number of new and more complex medical malpractice cases by FY 1998, with increases in each subsequent year. The AGUSC reported an 11 percent increase in the number of medical malpractice cases in which the United States was defendant in FY 1995. Thus, a conservative estimated increase of at least 10 percent in the tort caseload arising from medical malpractice cases for FY 1997 and FY 1998 can be expected.

It is anticipated that the additional resources will ensure efficient and effective use of resources, allowing the United States to be adequately represented in actions seeking monetary damages. We will measure our success, if provided the resources, by demonstrating an increase in cases handled and resolved in a shorter period of time in prisoner litigation cases; measuring the increase in the number of jury trials resolved in favor of the United States in employment discrimination cases; and, measuring the increase in the number of complex cases involving expert witnesses that are brought to resolution through settlement or trial in tort litigation cases.

It is important to note, however, that the amount of funds paid out in settlement or verdicts will not be measured as an indicator of success. Those figures are dependent on the size and quality of the cases brought against the government and, as a result, the funds paid out are no reflection on the success of the program.

SOUTHWEST BORDER INITIATIVE

	Perm. FTE's	MY	Amount
Criminal Decision Unit	37	19	\$2,836
Drugs - Southwest Border	11	5	1,061
Immigration	12	6	1,085
Official Corruption	60	30	\$4,982
Total			

The United States Attorneys are requesting 60 positions (38 attorneys), 30 MY, and \$4,982,000 to support the Southwest Border Initiative. The resources will address the problems of drugs being shipped across the border, illegal immigration and corruption.

DRUGS

The United States Attorneys are requesting 37 positions (22 attorneys), 19 MY, and \$2,836,000 to address the problem of drugs originating in or shipped through Mexico.

Mexico is the primary transit country for cocaine entering the United States from South America, as well as a major source country for heroin, marijuana and more recently, methamphetamine. The amount of cocaine seized and the number of drug-related arrests in Mexico have declined significantly since 1992. In addition, U.S. funding for counter narcotics efforts in the transit zone and Mexico has declined from approximately \$1 billion in Fiscal Year 1992 to about \$570 million in FY 1995. Estimates indicate that up to 70 percent of the more than 300 tons of cocaine entering the United States in 1994 came through Mexico. In March 1996, the State Department reported that Mexico supplied up to 80 percent of the foreign-grown marijuana consumed in the United States and from 20 to 30 percent of the heroin. Mexican trafficking organizations operating on both sides of the border have replaced U.S.-based outlaw motorcycle gangs as the predominant methamphetamine manufacturers and traffickers in the United States.

The Fall 1995 report from the Office on National Drug Control Policy, National Trends in Drug Abuse, states that marijuana use continues to increase in all areas, particularly in the Southwest. The report indicates that the sources of marijuana both local and imported most often from Mexico and the Caribbean. The report cites the storage of large amounts of marijuana at the Texas border, where growers and marketers have warehoused large supplies of marijuana in the El Paso and Lariat areas for release to distributors in other areas of the country. According to the report, methamphetamine, LSD and benzodiazepine Rohypnol were the emerging drugs as of the fall of 1995. The report states that methamphetamine has been a serious problem in the West and Southwest for a number of years, and its increasing availability from domestic laboratories and the abundant supply of the drug and/or its chemical precursors from Mexico have encouraged markets outside those areas.

The drug problem has other aspects, as well, as indicated by a recent General Accounting Office (GAO) report entitled Border Patrol: Revised Strategy is Showing Some Positive Results, December 1994. This report highlights the fact that between FY 1990 and FY 1993, the number of Border Patrol drug seizures along the

southwest border alone rose from around 4,200 to 6,400, an increase of over 50 percent. The amount of cocaine seized nearly doubled in the same period of time from about 14,000 pounds to about 27,000 pounds. A different study cited in the GAO report, entitled *Systematic Analysis of the Southwest Border*, deemed drug smuggling a serious threat in south Texas and the southern Arizona border area, which is dubbed "Cocaine Alley."

The drug problem is further highlighted in a GAO report to the Congress entitled *Drug Control: Interdiction Efforts in Central America Have Had Little Impact on the Flow of Drugs*, August 1994, which provided statistics showing that, just on the United States/Mexico border alone, almost 6,600 tractor trailer trucks and 21,000 passenger vehicles cross the border each day. In this report, GAO reported to the Chairman, Subcommittee on Information, Justice, Transportation, and Agriculture Committee on Government Operations, House of Representatives, that "available evidence suggests that the supply of drugs entering the United States via Central America remains virtually uninterrupted."

The results of the Client Agency Survey conducted by the EOUSA indicates that our client agencies also project modest but continued increases in referrals to the United States Attorneys' offices. Total projected narcotics referrals, as stated by 13 agencies who anticipate referrals in this area, are estimated to grow from 19,659 in 1995, to 20,724 in 1996, and up to 22,337 in 1997. This constitutes a projected increase of 13.6 percent from 1995 to 1997.

The United States Attorneys continued to direct substantial resources to the prosecution of non-OCDETF narcotics cases during 1996. These cases represented 21.5 percent of all criminal cases filed during the year, up from 17.9 percent in 1995. A total of 8,992 cases were filed, up from 8,434 cases filed in 1995, an increase of 6.6 percent. During 1996, 16,837 defendants were charged, up from 15,767 in 1995, an increase of 6.8 percent.

The increased prosecutions in the drug area consumed a greater portion of the United States Attorneys' personnel resources. During 1996, the total number of attorney workyears devoted to non-OCDETF drug prosecutions increased by 10.8 or 2.5 percent. Non-OCDETF drug cases during 1996 consumed 14.5 percent of all criminal attorney workyears.

Clearly, these reports and information indicate that drug usage and distribution remains a nationwide problem and will grow in the future. Our request seeks to address the projected growth in drug possession and distributions as well as augment United States Attorney capacity on the Southwest Border to support the extensive investigative initiatives currently underway in the region.

Immigration

The United States Attorneys are requesting 11 positions (8 attorneys), 5 workyears, and \$1,061,000 to combat illegal immigration along the Southwest Border.

The Southwest Border States--California, Arizona, New Mexico, and Texas--contain the principal corridors into the United States for illegal immigrants. The five districts located directly on the border adjacent to Mexico--Southern California, Arizona, New Mexico, Western Texas and Southern Texas--account for more than 80 percent of illegal entries into this country.

In the area of illegal entry, attention is focused on that segment of undocumented aliens who are directly linked to violence and crime in our country. In order to neutralize these dangerous aliens, we have relied upon 8 U.S.C. § 1326(b)--a statute which provides enhanced penalties for previously deported aliens with a criminal history who reenter the United States. The statute has been revised to permit, for those with the most serious felony records, sentences up to 20 years (although limited by the guideline range appropriate in the particular case). In accordance with the Attorney General's Immigration Initiative, the United States Attorneys have in place the means to identify, to an unprecedented degree, aliens with criminal records.

Another current focus, alien smuggling, centers on specific portions of the 2,000 mile stretch of the United States/Mexico border. The Department has undertaken a series of initiatives to address these problems through a substantial enhancement of INS/Border Patrol resources to implement and support the Administration's border control strategy. The United States Attorneys along the Southwest Border convene quarterly, as a Council, to coordinate, update, and discuss pending litigation. Prosecutors in these districts are encouraged to coordinate with INS, the Department of Justice, and the Department of Homeland Security. The focus of jointly coordinated prosecutive cooperation among these districts is unprecedented. The United States Attorneys meet with representatives of the Criminal Division, DEA and FBI regarding narcotics-related issues. The United States Attorneys also hold conferences with INS and Criminal Division representatives to address matters of illegal immigration in their continuing effort to enhance criminal alien prosecution policies in the individual districts along the Southwest Border and elsewhere.

In FY 1995, 15 Special Assistant United States Attorney positions were detailed from the DOJ for Operation Gatekeeper, to address the increase in immigration prosecutions which resulted from higher illegal entries in the Southwest Border States. As a result of these Special Assistant United States Attorney placements during 1995, more than 1,000 previously deported aliens were prosecuted for illegal reentry after deportation. This is seven times the number of cases prosecuted in 1992. The number of felony smuggling cases has more than doubled in 1995 to a total of 80 indictments in the first months of 1995, compared to 24 cases in all of 1994 and 31 in 1993. These indictments send these criminal aliens back out the streets faster and send a strong deterrent message to potential returnees.

In FY 1995, 42 Assistant United States Attorneys, 13 paralegal and 27 support positions were allocated to United States Attorneys' offices. These positions have assisted greatly in meeting the growing need for prosecutions; however, they alone--or they, combined with Special Assistant United States Attorney positions--were not sufficient to meet the steadily increasing caseload expected as a result of increased INS staffing. In FY 1996, 26 positions, including 13 Assistant United States Attorneys, were funded to continue the President's Immigration Initiative.

In FY 1997, positions were requested for the Southwest Border Initiative and to address caseload generated by increased Immigration Judge resources directed to the identification and removal of deportable aliens, and the addition of 50 Immigration Judges. However, the request was not funded. The United States Attorneys are faced with an imbalance in the number of prosecutors available to support the tremendous growth that the INS expects to continue through the year 2000. The United States Attorneys' offices have not yet experienced the impact of a full complement of resources that the INS expects to have available in FY 1997. The increases over FY 1995 on-board figures include 1,878 Border Patrol Agents, 1,438 Inspectors and 484 Criminal Investigators. In FY 1998, the INS is requesting additional resources.

The United States Attorneys' offices along the southwest border are beginning to see the impact of increased law enforcement resources. During FY 1996, the five United States Attorneys' offices along the border filed 3,089 cases against 3,461 defendants. This is an increase of 242.1 percent over cases filed in FY 1994, and an increase of 231.5 percent in defendants. Cases terminated increased by 188.7 percent during the same period to 2,746. The defendants terminated increased by 174.7 percent to 3,079.

New initiatives directed to the ports will expand dramatically the number of persons apprehended and charged with alien smuggling, use of counterfeit documents, and misrepresentation of citizenship or residency status. Other programs project a vastly increased effort to enforce employer sanctions through the use of civil as well as criminal sanctions. Taken together, these enforcement operations will require a commensurate increase in United States Attorneys' resources allocated to the prosecution of immigration-related crimes.

Official Corruption

The United States Attorneys are requesting 12 positions (8 attorneys), 6 WF, and \$1,085,000 for the prosecution of official corruption.

Rooting out corruption by officials in whom the public trust is vested, and other government-related corruption, is an important and unique function of the United States Attorneys. Over the past year, the United States Attorneys increasingly have fulfilled this vital public function through the investigation and prosecution of official corruption cases.

The investigation and prosecution of criminal misconduct or a breach of law by public officials or other government employees remains a priority of the Attorney General. Without a continued, vigilant effort to investigate and prosecute those who violate their oaths of office, we will not be able to maintain the American people's trust and confidence in government. The United States Attorneys require the resources to address these cases.

During FY 1996, the United States Attorneys' offices filed 470 criminal cases charging 646 defendants with official corruption. These prosecutions included official corruption in federal procurement, federal and state contract administration, and federal and state education. The United States Attorneys' offices and other officials during FY 1996, the United States Attorneys also terminated 448 cases against 603 official corruption defendants. This represents an increase of 7.4 percent in cases terminated and an 8.3 percent

increase in defendants terminated. Eighty-seven percent of the defendants terminated were convicted and 44.6 percent returned to prison. Increases observed in the number of cases and defendants pending. At the end of FY 1996, there were 472 official corruption cases pending.

Official corruption cases are among the most hotly contested and highly sensitive of all criminal cases prosecuted by the United States Attorneys. During FY 1996, 13.6 percent of the official corruption defendants whose cases were terminated were terminated by trial. This is among the highest percentage of defendants tried of any of the major criminal case categories. Such cases require a high devotion of resources.

Some examples of cases prosecuted during FY 1996 that demonstrate the complexity and importance of official corruption prosecutions handled by the United States Attorneys include:

- In the Eastern District of California, a former City Council member and a real estate developer pled guilty to charges in connection with a scheme to exchange cash payments for official assistance on building development projects being considered by the City Council.
- In the Northern District of Illinois, the former director of facilities for the Chicago public schools pled guilty to handing out millions of dollars in school repair work in exchange for bribes worth \$337,000 in cash, free work at his home, a luxury car, and real estate. He agreed to pay \$225,000 in restitution.
- In the District of Minnesota, a state senator was convicted of conspiracy, theft from an Indian organization, theft from a federally-funded organization and mail fraud. The defendant, a lawyer for the Leech Lake Band of Chippewa Indians, stole over \$1 million from the Band through a phony tribal "self-insurance" company. The company was used as a slush fund to evade state sales taxes and pay for personal expenses.

While the federal government struggles to balance the national budget, state and local governments also are struggling to balance their citizens' demands for increased services against stagnant or shrinking revenues. As the federal government considers providing block grants directly to state and local governments as a means of reducing the federal bureaucracy, state and local governments are tightening their belts and may not be able to provide the degree of monitoring of federal funds that is required to ensure appropriate use. Together, these factors can lead to increased opportunity for misuse of funds or engagement in corrupt practices. Our ability to anticipate this shift of resources will enable us to avoid a catastrophic result like that which occurred during the Savings and Loan crisis.

According to the Budget of the United States Government Fiscal Year 1997, Historical Tables 11.1 and 12.1, outlays of the federal government for individuals will increase by 76.58 percent, to \$1.03 trillion between 1990 and 1998, with outlays for grants increasing by 90.58 percent, to \$257.9 million, during the same period of time. Increases of this magnitude, without concomitant increases in federal, state and local resources devoted to monitoring the administration and use of funds, will almost certainly lead to abuses. The majority of these dollars pass through state and/or local government offices before they reach the

intended recipients. Some of the public officials and employees responsible for these funds will succumb to temptation and convert funds to their personal use. The United States Attorneys must have the resources available for investigation and prosecution.

Responses to the FOIA Client Agency Survey show that official corruption referrals are expected to continue to increase. The survey showed that client agencies project that their official corruption referrals will grow by 3.5 percent from FY 1996 to FY 1997, and will grow by an additional 7.6 percent from FY 1997 to FY 1998, for a total of 11.25 percent.

In their response to the survey, the FBI reported that they anticipate referring 41,075 white collar crime cases, which includes official corruption referrals. However, they are not able to provide a breakdown in the White Collar Crime program. In their response, the FBI reported that they expect to devote increased resources to the areas of public corruption involving bribery and conflict of interest of federal officials, and corruption of federal, state, and local officials, including law enforcement officers. Also, the FBI is requesting 34 additional agents in the FY 1998 budget.

The workload per official corruption Assistant United States Attorney continues to increase. An analysis shows that, on average, official corruption Assistant United States Attorneys handled 8.4 cases per workyear in FY 1995, 8.6 cases per workyear in FY 1996, and 9.1 cases per workyear in FY 1997. This represents an increase of 9 percent in the number of cases handled per workyear. The projected increase in public corruption could not be absorbed by current staff without an adverse impact on other criminal workload.

During our Spring Call effort, six United States Attorneys' offices reported that their local Special Agent in Charge has increased, or plans to increase, resources devoted to official corruption in their districts. The requested resources will allow for a reduction in white collar crime, and protect the integrity of public programs and the American citizens' trust in public officials.

CHILD SUPPORT ENFORCEMENT	Perm.	NY	Amount
Criminal Decision Unit	10	5	\$632

The United States Attorneys are requesting 10 positions, 5 NY, and \$632,000 in support of the United States Attorneys' efforts to enhance enforcement of child support payments on a pilot basis. These resources will allow the United States Attorneys' offices to enhance enforcement of the provisions of the Child Support Recovery Act of 1992 (CSRA). Success in this initiative can yield significant results for children in America, and a reduction in the demand on already burgeoning government entitlement programs.

The Attorney General has strongly emphasized the need to improve the lives of America's children by providing a family atmosphere that fosters the growth and development of well-adjusted adults who were well nourished, properly clothed and adequately housed as children. Recovery of hundreds of thousands of dollars of unpaid child support will greatly assist custodial parents in funding the quality of their children's lives, as well as helping to diminish unnecessary Executive Branch expenses for entitlement programs. Such programs

provide some of the monies which are not paid by absent, but legally responsible parents. In a December 1994 report entitled Child Support Enforcement: Families Could Benefit from Stronger Enforcement Programs, the General Accounting Office (GAO) stated that greater Federal leadership coupled with equally intensive state efforts could better position the national child support enforcement program to serve the families that depend on it. GAO noted the dramatically increasing numbers of children needing support. It also stated that the child support enforcement caseload grew 180 percent between 1980 and 1992. Another study cited by GAO estimated that the gap between total child support that should be paid nationwide and total child support paid was \$34 billion in 1990. The GAO report went on to state that a widespread public perception exists that the child support enforcement program is failing to adequately address the nationwide problem of child support non-payment. Estimates of the child support enforcement caseload range from 300 to 2,500 cases per worker, and officials believe that many cases now take more work than ever before.

United States Bureau of the Census data quoted in the report shows that there were 9.8 million custodial mothers aged 18 years and older in 1990, or 39 percent more than in 1989 and that 62 percent of all custodial mothers in the United States did not receive child support in 1989.

It was hoped that the CSRA program would be implemented without the need for additional United States Attorneys' office staff because prosecutions were to be against individuals who had already been ordered to pay child support, and against whom legal action had been taken in the state courts to enforce the orders which had been issued. It was further anticipated that state agency efforts to collect delinquent child support obligations would be assisted in the creation of fully investigated, completely assembled referral packages/matters which would need little more than efficient presentation to grand juries.

The experience of the Assistant United States Attorneys who have prosecuted these cases has been that often a substantial amount of background work is needed to assure the documentary evidence required to support these prosecutions. This work often cannot be done by state child support enforcement personnel because of their excessive caseloads or because the non-custodial parent and his or her assets are located in distant states. Responsibilities related to this work include: obtaining a copy of the divorce files; communicating with the state's child support enforcement agency; reviewing federal income tax returns; performing a credit check in a state other than that in which the United States Attorney's Office is situated; and searching for ownership records of real property, and other assets, again in a state other than that in which the United States Attorney's Office is situated. This workload can be further complicated by the flight of the non-complying individual.

The United States Attorneys' offices will use paralegals for the time-consuming initial preparations of these cases until they are ready for filing. These cases are document-intensive and the paralegals will gather the documents, organize the background materials, and present the package to Assistant United States Attorneys.

The United States Attorneys' offices do not currently have individuals with the needed qualifications. First-time offenses are misdemeanors and it is an inefficient use of resources to tie up highly-trained FBI agents to do document collection and sorting work. It is also an inefficient use of resources to tie up a trained prosecutor to do such work.

The growing size and complexity of the caseload reflects the major changes in demographic characteristics of the American family. High rates of divorce and out-of-wedlock births have resulted in more children living in single-parent households.

The United States Attorneys have made steady progress in this type of prosecution; matters referred have increased from 11 in FY 1993, to 137 in FY 1994, to 748 in FY 1995. Matters later declined have increased from 1 in FY 1993, to 30 in FY 1994, to 234 in FY 1995. Cases filed have increased from 2 in FY 1993, to 12 in FY 1994, to 82 in FY 1995 and 140 in FY 1996.

Between FY 1994 and FY 1995, the number of matters referred increased by 445 percent. The later declination rate (31.2 percent) has increased the workload of Assistant United States Attorneys.

Later declination is caused by a number of factors: the Government's determination through investigation that is unable to demonstrate parents' ability to pay; incomplete information provided when referred; restitution made after a prosecution decision was made and the non-custodial parent contacted; lack of jurisdiction; and, other circumstances uncovered upon further investigation.

The average amount of restitution ordered is approximately \$33,500. The benefits of this initiative to custodial parents who have sought to collect past-due support payments for years undoubtedly cannot be measured solely in dollars. In almost every case, the defendants were also ordered as part of their sentence to report address changes and to continue to make the prospective payments on a timely basis. The threat of revocation of probation undoubtedly will be far more persuasive than that of potential contempt citation imposed by the court. Court-ordered restitution was \$35,000 in FY 1993, \$100,000 in FY 1994, and \$183,504 in FY 1995. In FY 1993, court-ordered restitution was \$35,000; in FY 1994, it increased to \$183,504; and, in FY 1995 totaled \$1,246,344--a 379 percent increase over FY 1994.

Since there is no historical data or model to determine what level of paralegal resources would be sufficient to address this program on a nationwide basis, pilot programs would be established based on the articulated needs of the United States Attorneys' offices. In order to develop representative models that could be applied to all offices, pilot offices must be established in various sized districts. The results of the program in FY 1998 would be used to assess the need for expansion of this program.

DISTRICT OF COLUMBIA, SUPERIOR COURT

Criminal Decision Unit	Perm. FOL	FY	Amount
Support Positions	66	33	\$3,877
Community Prosecutions	74	37	5,865
Homicide	5	3	453
Gangs	10	5	848
Domestic Violence	10	5	857
Total	165	83	\$11,900

SUPPORT POSITIONS

This initiative seeks 66 positions, 33 WY, and \$3,877,000 in support of the United States Attorneys Office, Superior Court Division, District of Columbia, to provide timely, useful, and reliable financial and administrative information, streamline internal processes, and better utilize information technology to coordinate legal and administrative functions.

The United States Attorney's Office for the District of Columbia is seriously understaffed in support personnel. The understaffing has presented a multitude of management problems, both for central management and administrative support, but also in all of our litigating activities.

While Superior Court attorneys spend a great deal of time in the courtroom and away from their offices, they still require a secretary to perform traditional secretarial functions and significant pretrial preparation. The sheer volume of cases presents a great need for support personnel. There are usually over 100 cases on the District of Columbia "lock-up" list each day (including Saturdays and holidays). Each of these must be addressed and processed through arraignment court by our office personnel before the end of the day. In addition, there are five grand juries which sit five days per week.

Support personnel are needed, among other things, to open case files, track them through the system, assist in locating witnesses and preparing them for trial, serve as receptionists, maintain court calendars, prepare and maintain the court docket, coordinate courtroom operations, and provide clerical support to the Assistant United States Attorneys (AUSA's). Unfortunately, AUSA's are required to do most of their own clerical and legal technical support work due to our staffing shortages.

Some may have the view that certain economies of scale should accrue in an office this size. That might be true if the Office was simply an extra large Federal operation. But it is not; it is two very different operations, each complex in its own right and made even more complex by the very existence of the other. Virtually every aspect of administration and management is complicated by the need to maintain dual systems. This is particularly true in the areas of automation and financial management. Separate systems and procedures must be maintained to support the Superior Court side of the office. Automation and financial management personnel must interact with both Department of Justice operations personnel, but also with counterparts in District of Columbia agencies, further adding to the complexity of their work.

Therefore, the volume and nature of the Superior Court caseload, coupled with the history of understaffing of support personnel, has resulted in a critical situation for Superior Court attorneys and all others assigned to this Division. This one time request seeks to substantially increase support staffing.

At the present time, 211 AUSA's in the United States Attorney's Office for the District of Columbia are dedicated to Superior Court work. These attorneys are supported by 122 positions dedicated to direct legal support for AUSA's (i.e., secretaries, legal technicians, paralegals, docket personnel, criminal history analysts, etc.). An additional 52 positions support Assistant Attorneys in Superior Court in centralized administrative and victim-witness advocacy functions.

There are many notable support staffing shortfalls. First, the staffing in direct support of AUSAs is inadequate. At this time, there are many secretaries who are responsible for as many as six AUSAs. For example, in the Homicide Section, there are currently 28 attorneys assigned and only 5 secretaries on board. In the Sex Offense Section, there are 14 attorneys and only 2 secretaries. In the Violent Crime Section, there are 18 attorneys and 3 secretaries. There are also AUSAs who have no paralegals at all available to them.

Our goal is to have at least one secretary (or other legal technical support position) and one paralegal for every three AUSAs. This does not mean that there will be one person performing only secretarial duties for every three AUSAs. These personnel will also be responsible for processing all cases from the initial stage through case closing, time and attendance and USA-5 reporting, docketing and many other central administrative functions.

We currently have only one position dedicated to litigation support. We feel that we could greatly improve our presentation of evidence at trial if we could develop an in-house capacity for courtroom graphics and document management in complex document intensive cases.

The most important task of a litigation support staff would be to produce demonstrative evidence--charts, and maps--and improve on the presentation of photograph evidence. It should be noted here that until the last few years, the Metropolitan Police Department provided much of this graphic work through their Mobile Crime Lab. This service is no longer available to us. And until only one year ago, the Medical Examiner's Office used to provide us with photographic blow-ups of autopsies. This service has also been discontinued by the District of Columbia government.

A staffed litigation support unit would also oversee work sent out to litigation support contractors, or performed by such contractors in-house. For instance, we currently are seeking to secure contract personnel in several significant cases. Use of these contracts has been limited in this district because there are limited resources to devote to procurement of services and management of the contracts.

Over and above those personnel, we also require other special legal technical personnel (such as criminal history analysts) to review categories of information and assist in the area of gathering intelligence and discerning patterns of crime. Criminal history analysts serve a vital role in the intake process in that they verify the identity of the individual being charged and review their prior arrests. This screening helps assure that individuals who may have been detained on a minor charge are not wanted for a more serious offense or may be guilty of a parole violation. Failure to carefully perform the records check could result in the inadvertent release of violent offenders into the community.

In addition to direct support for attorneys, we require additional resources for our central Administrative Division. Our most critical need is more personnel for automation. Our Automation Staff is struggling to maintain operations on EAGLE, prepare for Phoenix conversion, satisfy demand for office-wide and specialized applications for users, and satisfy all other requirements for inventory management, security and department generated systems management requirements.

Our ratio of automation personnel to users is approximately 1 to 43. This would be a heavy load if all these individuals had to do was SCHRIE-type work. Several positions are dedicated to maintaining and tailoring special applications. While it is true that we receive many applications developed by AUSA and the efforts of that staff should be factored into our need for in-house personnel, we must note that we have to tailor every system designed for all United States Attorneys' application, because of our unique dual responsibilities and sometimes rework them completely or create substitute applications for our Superior Court Division.

The Finance Unit of the Administrative Division also has a disproportionate heavy workload resulting from Superior Court caseloads. There are more transcripts, more interpreters, more experts and litigation expenses of every kind. Also, the pace of the office in general and global understaffing detracts from the quality of work secretaries and others do in preparing time and attendance records, travel vouchers, and all litigation related bills for payment. Additional resources must be devoted to improving procedures and timeliness in these areas before serious internal control problems develop.

There are insufficient personnel assigned to all reception areas and security is a continuing concern. There are approximately 900 visitors to the office each day and they tend to arrive in large groups. Visiting witnesses are at times angry and violent and need to be supervised, or at least carefully watched. Unfortunately, Court Security Officer resources are not available to provide full time waiting room coverage. There are presently two staffed floors with no receptionists assigned. Due to attrition and the hiring freeze, other floors have very spotty coverage, requiring that secretaries and supervisors rotate through reception duties to assure coverage. We would increase the number of receptionists to two per floor to assure better protection of all entrances to work areas, more careful scrutiny of visitors, and better supervision of waiting areas.

At the present time, the total number of support positions dedicated to Superior Court, including both secretarial, legal technical, and paralegal, is centralized within the support staff of 174. We propose to increase support staffing dedicated to Superior Court operations by 66, for a total support staff of 240.

This increase in personnel would improve the general quality of office operations immensely. The day-to-day pace of litigation in this Office, and the demands of maintaining work related to our dual responsibilities creates a chaotic environment and puts inappropriate workload demands on AUSAs. Our attorneys are forced to do their own typing, copying, routine legal research, and even perform reception duties in order to assure that they locate their witnesses and get them into the right conference room or courtroom at the right time. We could provide AUSAs with better assistance to victims and witnesses and offer basic litigation support services as they prepare for trial. We are certain that the quality of litigation and related responsibilities would improve, but the quality of life--both inside the office and in the community we serve--would also improve as a byproduct.

We could improve our internal control in the areas of time and attendance and payroll, travel management and office security. We could take advantage in the use of automation for data management, litigation support and document generation, rather than simply keep the equipment running.

These are all basic office operations results and are clearly less compelling and thus less persuasive than new initiatives. However, these resources would all be dedicated to supporting the Department's most serious problems: drug trafficking, violent crime, and narcotics trafficking. The Attorney General also spoke in her 1997 budget hearing of her desire to provide State and local governments with critically needed anti-crime resources. This Office is engaged every day in fighting crime at the local level. We feel confident that this request is consistent with her goal.

We will measure the success in this program, if provided the resources, by improving cycle time for key processes.

Community Prosecution

This initiative seeks 74 positions (39 attorneys), 37 MY, and \$5,865,000 to expand the Community Prosecutors (CP) initiative to the entire Washington, D.C. community. The additional prosecutive work that has been and will continue to be generated by this initiative will require additional prosecutive resources. The CP initiative will increase both attorney and support staff increases. More proactive approaches to asset forfeiture and nuisance abatement litigation will require additional attorney and support staff as well.

There is a need to increase community outreach to enhance prosecutive function, increase public safety in the targeted neighborhoods, and improve the overall quality of life for the city's residents and guests.

For several years, Attorney General Reno and experts in the field of law enforcement have advocated the benefits of community policing in reducing crime and improving the quality of life for residents in the affected area through community partnership and problem solving.

In an effort to maximize our involvement with the community, this Office has begun a Community Prosecution Pilot Project in one of the seven police districts within the District of Columbia. The CP initiative is designed to target and address the most serious criminal justice problems of both local and federal criminal matters occurring in that district. In addition, the Project has created partnerships with the community, various law enforcement agencies, and other public and private agencies in an effort to enhance its prosecutive function, increase public safety in the targeted neighborhood, and improve the overall quality of life for the city's residents and guests.

The CP Pilot Project was formed by reassigning nineteen attorneys and seven support personnel throughout the Office to a single Section. Two AUSAs were relieved of active caseloads in order to be designated Community Prosecutors for the Fifth Police District. They share responsibility for staffing the United States

¹ Monograph: Understanding Community Policing - A Framework For Action. Washington, D.C.: Department of Justice, Office of Justice Programs, Bureau of Justice Assistance. 1994, p.13.

Attorney's Office at the police station. In addition, the CP Initiative uses the part-time services of one of our Asset Forfeiture attorneys to become more proactive in the areas of forfeiture and nuisance abatement.

The Community Prosecution model is very resource intensive. Rather than processing criminal cases in an "assembly-line" fashion, this model contemplates careful review of each case in the larger context of the affected community. Spin-off offenses that may be related to a more significant crime or gang receive greater attention in the CP Section than in a traditional section of the Office. We have also initiated many investigations and referrals that have resulted in increased cooperation between the community and law enforcement, requiring an infusion of more attorneys and support personnel.

Members of the CP Initiative are also much more involved in helping the community solve some of the problems affecting the quality of life in that area. To that end, we are in the process of establishing close working relationships with D.C. government agencies (e.g., Department of Public Works) in an effort to make them more receptive to our requests for assistance.

Unsolved Homicide Case Investigations Squad

This proposal would add 5 positions (3 attorneys), 3 WY, and \$453,000 to this specialized unit. The additional resources for this effort would be devoted to the investigation and prosecution of cold homicide cases in conjunction with the Cold Case Squad agents and investigators. The attorneys will be co-located part-time with the Cold Case Squad so that they can work closely with police investigators in order to develop cases that they can successfully prosecute.

In doing so, we expect to dramatically increase the success rate of the Cold Case Squad in solving cold cases. This we hope will increase our ability to bring violent offenders to justice and to offer consolation to the family members who have been so deeply impacted by the loss of a loved one to a violent crime.

Over the past 10 years, Washington, D.C. has experienced a tremendous increase in violent crime and, for several years, has had the highest per capita murder rate in the country (from 1985 through 1991, the number of homicides each year more than tripled). Remarkably, less than 60 percent of these murders have actually been solved by arresting and prosecuting a suspect. To work on the problem of aging unsolved homicide cases, the FBI and the Metropolitan Police Department (MPD) have created the "Cold Case Squad" which consists of 10 FBI agents and eight MPD homicide investigators whose mission is to analyze and investigate old, difficult cases. This investigative squad has been enormously successful in solving these cases and in obtaining convictions. However, this squad has been unable to handle the backlog of unsolved homicide cases in this Office's Homicide Section. However, this Office has been unable to devote sufficient resources to the initiative to allow us to play a more integral role in the investigation and prosecution of "cold" cases.

The investigation of old, difficult, homicide cases is far more complex and resource-intensive than traditional homicide cases. The investigations involve the use of novel, aggressive, and sophisticated investigative techniques that require the involvement of prosecutors for legal counsel and direction. In

particular, the investigation of these cases often involves the use of cooperating defendants who have provided information in exchange for deals in their own cases. The involvement of a prosecutor is essential in order to secure the cooperation of such defendants. Involvement of prosecutors also facilitates greater cooperation between the federal and local law enforcement agencies in a worthwhile and productive endeavor.

GANG PROSECUTIONS

This proposal would add 10 positions (5 attorneys), 5 WY, and \$848,000 to this effort. The additional resources will be used to create a Gang Prosecutions Unit designed specifically to identify, analyze, investigate and prosecute violent gang groups throughout the city. Currently, the equivalent of one attorney focuses on gang prosecutions in the District of Columbia. The additional resources will also coordinate efforts with law enforcement agencies in surrounding jurisdictions. In particular, this Unit would coordinate the efforts of both federal and local law enforcement agencies by:

1. Establishing the necessary intelligence network to identify gangs and criminal gang activity;
2. Analyzing and prioritizing gang targets;
3. Establishing investigative teams among local and federal law enforcement agencies designed to make effectively investigate designed targets and coordinating the efforts of those teams; and
4. Preparing the necessary evidence to prosecute successfully an entire gang for a variety of gang-related criminal violations, and not just individual members for isolated incidents.

We have determined that the increase in violent crime in the District of Columbia over the past decade is due largely to the rise of gangs and gang-related violence. Gang investigations and prosecutions constitute a highly specialized area of law enforcement. Unfortunately, this Office has not had sufficient resources to address the problem using a well-organized and closely coordinated approach. Moreover, the investigation and prosecution of gang activity has fallen under the auspices of a variety of law enforcement agencies and even different units within those agencies. It has lacked the type of directed and coordinated effort necessary to make an overall attack on gang violence successful.

Gang investigations and prosecutions are extremely complex, resource-intensive, and long-term. Effectively investigating and prosecuting a violent gang often requires the efforts of at least one full-time attorney on that project, with an investigative team of local and federal law enforcement officials. Often these prosecutions require that more than one attorney be detailed to the case. We will need to augment our current resources in order to take an aggressive and affirmative approach to prosecuting gangs in both local and federal court without impacting on the effectiveness of the Office's ability to handle its traditional caseload.

If our request for additional resources is approved, we believe that we can target the twelve most violent gangs in the city for prosecution and make headway into combatting the violence spawned by gang activity.

Domestic Violence Unit

To adequately staff the Domestic Violence Unit we anticipate that we will need an additional 10 positions (5 attorneys [misdemeanor-level prosecutors, general felony-level prosecutor, and homicide/VAMA-level prosecutors]), 5 WY, and \$857,000. This would allow the Office to begin vertical prosecution of the felony cases and accommodate the monumental increase in misdemeanor prosecutions.

Each year, over six thousand criminal cases involving some form of domestic violence are referred to the United States Attorney's Office for the District of Columbia for prosecution. These cases involve not only violence against women, but spousal and partner abuse, intrafamily child abuse, sibling abuse, and elder abuse. The United States Attorney's Office has been successful in prosecuting these cases through a combination of traditional prosecutive methods and a more aggressive approach to combating domestic violence in the District of Columbia. Toward that end this office has created a Domestic Violence Unit within the Superior Court Division which will be staffed with trained, dedicated personnel who will vertically prosecute all of the Office's domestic violence cases, including violations of the Violence Against Women Act.

On November 4, 1996, the District of Columbia Superior Court began its Domestic Violence Project. The chief components of the Project are a unified Domestic Violence Intake Center and a Domestic Violence Court calendar where all civil and criminal domestic violence cases are heard by specially trained judges. The net result of the Project appears to be a more efficient and victim-friendly way of handling domestic violence matters. It has also caused a substantial increase in the number of domestic violence cases that will be prosecuted by our Office--an increase that cannot be met by our current staffing.

Traditionally domestic violence criminal cases were presented to the United States Attorney's Office by law enforcement personnel after an alleged abuser was identified and arrested. With the new Domestic Violence Intake Center, however, advocates from the Victim Witness Assistance Unit are available to all persons seeking a civil protection (restraining) order. These advocates are identifying--and referring for prosecution--numerous cases that heretofore were never reported to the police. In the first two months since the Intake Center opened, the advocates have seen up to four times the number of cases than under the old system. This dramatic increase in the number of referrals undoubtedly will be reflected in the coming months in the number of cases handled by the prosecutors in the Domestic Violence Unit.

The criminal cases coming before the Domestic Violence calendar are prosecuted by AUSAs in the Superior Court Division's Domestic Violence Unit. Currently there are four misdemeanor-level prosecutors (three regular AUSAs and one Special AUSA) handling all of the cases assigned to the Project with each AUSA carrying a caseload of approximately 200 cases which are pending trial. Originally, the Domestic Violence Project was to include misdemeanor and felony domestic violence cases. However, due to a staff shortage, the AUSA's Office had to delay including the felony cases because of a staff shortage. There are approximately 20 felony domestic violence cases each month. On any given day, between 10 and 30 domestic violence cases are scheduled for trial.

For several reasons, the number of cases scheduled for trial has been growing at a steadily increasing rate since the inception of the Domestic Violence Unit. First, the Office has begun to enforce a strong 'no-drop' policy. Victims of domestic violence are not permitted to 'drop charges' and therefore more cases result in trials. Second, with trained prosecutors the Office is able to present more cases without the cooperation, or participation, of the victim. These cases historically would have been dismissed and are now regularly prosecuted. Finally, as the police department do more thorough investigations, growing percentage of cases are being referred to the Domestic Violence Unit. The Office is projecting that in 1996, the actual number was over 6,000. Based on our experience so far the Office estimates that it will see significantly more cases--perhaps twice as many as last year--during 1997.

It is also important to note that there has not yet been a Violence Against Women Act (VAWA) prosecution in the District of Columbia. This is due primarily to a lack of available prosecutors to focus on and develop such cases, which are made more difficult because they are typically poorly investigated by the Metropolitan Police Department.

Recent research demonstrates that children who grow up in homes where there is domestic violence are more likely to grow up to be batterers themselves. These children are also more likely to resort to violence to solve their problems when they are on the street. The research also indicates, however, that early intervention by the criminal justice system is the only consistently effective way to stem the domestic violence tide by aggressively prosecuting domestic violence cases. We wish to reach the goal of the Domestic Violence Unit. Significant attention must be given to public education on the goal of the Domestic Violence Unit. The message this Office intends to send is that in the District of Columbia there is a zero-tolerance for acts of domestic violence.

We will measure our success, if provided the resources, by significantly reducing the incidence of domestic violence in the District of Columbia through our Domestic Violence Unit, working in conjunction with other agencies and organizations.

ACTIVATION OF NATIONAL ADVOCACY CENTER			
Legal Education Decision Unit			
Perm. Pos.	WY	6	AMOUNT
9			\$6,237

The United States Attorneys are requesting 9 positions (2 attorneys), 6 WY, and \$6,237,000 in support of the activation of the National Advocacy Center. This initiative would provide operating positions and funds for the National Advocacy Center, Columbia, South Carolina; add a Civil Assistant Director to direct the work of the team that already exists in this area; establish a new training team and provide operating expenses to execute training for paralegal/support staff; establish a new training team and provide operating expenses to develop and execute training for basic advocacy skills in the criminal, civil, and appellate areas; and ensure a well-trained work force.

The request is divided into two parts--National Advocacy Center and Legal Education.

Part 1: National Advocacy Center

The Office of Legal Education (OLE) is scheduled to move from its present location in Washington, D.C., to Columbia, SC. Two positions and \$2,868,000 are requested to support the activation of the National Advocacy Center (NAC) in Columbia, SC.

The United States Congress provided funds in FY 1992 to relocate the Department of Justice's legal education program to a facility on the campus of the University of South Carolina (USC). On March 5, 1992, the Government submitted a plan to Congress providing for the creation of the NAC. In FY 1993, additional funds and authorities were enacted to implement the plan and construct the NAC facility. To comply with the intent of Congress, the Government entered into discussions with the USC and the National District Attorneys Association (NDAA). A relocation site was identified and a cooperative agreement was executed between the DOJ and the USC on July 19, 1993. A ground-breaking ceremony was held on May 3, 1996, construction is underway, and classes are tentatively scheduled to begin in April 1998.

The NAC will feature an integrated instructional and residential facility augmented by a conference and research center with student and support services on site. The NAC will provide, for the first time, joint training programs for federal prosecutors, civil attorneys and local prosecutors in areas where they have mutual interests. Examples of these include drug, environmental and white collar prosecutions, as well as new focus areas such as government procurement law and health-care fraud.

The audience to be trained at the facility includes the 4,500 AUSAs across the nation, as well as 3,200 other DOJ attorneys, 13,200 non-DOJ attorneys in the Executive Branch and an estimated 21,000 state and local prosecutors. In addition, federal paralegal and support personnel will be trained at this location.

Operating Positions

Two positions and \$108,000 are requested for new or additional duties which must be performed on site at the NAC. One position is for a fiscal clerk who will be responsible for issuing financial payments (drafts), examining and posting reimbursable charges submitted by contractors, vendors, USC, and NDAA and for reconciling various accounts. It is anticipated that charges for residential and dining services will be approximately \$1.9 million per annum, in addition to charges for reimbursable services directly provided by USC.

Currently, OLE is not responsible for the financial management of a conference center; this will be a new responsibility. It will be complicated by the presence of significant numbers of non-Federal attendees and the need to allocate expenses between multiple accounts or appropriations.

The second position is for a systems manager to operate and maintain three Phoenix servers and 80 personal computer workstations, and to provide technical assistance to staff and instructors regarding presentation of instructional material (e.g. use of Powerpoint, multiple-video monitors). The new servers service three

disparate audiences--Federal staff, NDA staff, and students using the computer lab. Currently, OLE technical requirements are serviced by EOUSA's systems manager.

Unless these new positions are authorized, positions must be reallocated from curriculum teams, thereby diminishing the training extended to United States Attorneys' offices, DOJ Divisions, and Executive Branch Agencies.

Operating Expenses - \$600,000 (half-year expenses)

Activation of the MAC will introduce a number of new expenses for the legal education program. Among other things, these expenses include: utilities for a 260,000 square foot facility; maintenance of a 425 station telephone system; protective services; and reimbursable technical support services. The total estimate for "basic operating expenses" is \$1,600,000 per annum, which will be assessed against OLS. These basic operating expenses are relatively indifferent to course load or facility utilization, at least over the short term. They are best viewed as fixed costs associated with the MAC. Excluded from this estimate are increased costs associated with lodging and meals. These latter costs are addressed separately.

Unless these funds are authorized, OLS will have to significantly reduce training activity to subsidize these expenditures. Absorbing such an increase would decimate the legal education program.

Training Agency Attorneys - \$100,000 (half-year expenses)

Attorneys from all Federal Executive Branch Agencies attend courses presented by OLS. Historically, OLS has not requested nor funded travel and per diem expenses of employees of other cabinet agencies. As a practical matter, most courses targeted at employees of other agencies have been held in the Washington, D.C., metropolitan area.

Relocation of this category of training was an element of the MAC plan presented to the United States Congress in 1992. An annual increase of \$1,400,000 will be needed to pay travel and per diem expenses of "agency attorneys" to attend programs at the MAC. Failure to appropriate this funding will require OLS to require other agencies to pay their employees' travel and per diem expenses, or continue to present this category of training within the District of Columbia metropolitan area.

Neither of these alternatives is desirable; each has significant drawbacks. One imposes additional expenses on the other cabinet agencies, and the other requires the OLS to operate a bifurcated education program, with attendant logistical problems.

Equipment - \$100,000

Base funding for the OLS decision unit does not contain any significant level of funds for equipment acquisition and/or replacement. Funds will be required in FY 1999 for the fitting and equipping of the video production studio for the MAC. It is very likely that other immediate equipment acquisition needs

will be identified as a result of occupancy in 1998. Finally, the instructional support systems, courtroom presentation systems, video production and editing equipment, and guest room furnishings and equipment will require continuous updating and refurbishment in subsequent years.

This enhancement provides a base level of funding for this activity. The funding level represents 10% of the initial furniture and equipment allowance of the MAC.

Relocation Expenses - \$960,000

Some EOUSA employees are expected to accept reassignment from Washington, DC, to Columbia, SC. The transfer of these employees is in the best interest of the Government and they are therefore entitled to payment of relocation expenses. A review of recent relocations established an average relocation expense allowance of \$40,000. Extending this figure to 24 employees results in a requirement for \$960,000 for the payment of relocation expenses. If OLE is required to absorb this expense during FY 1998, course offerings must be reduced by a corresponding amount.

Part 2: Legal Education

Seven positions and \$3,369,000 are requested to supplement the existing staff of OLE and increase the number of courses offered. OLE is charged with providing training for DOJ and government attorneys employed by the Executive branch agencies. OLE, through the Attorney General's Advocacy Institute (AGAI), conducts training for Assistant United States Attorneys and Trial Attorneys in the Department of Justice. The training provided by the AGAI ranges from the basic trial advocacy skills programs, currently the main focus of the Advocacy Institute, to substantive law courses and managerial training programs. The Legal Education Institute (LEI) is the division of OLE that trains the non-DOJ Executive branch attorneys. LEI provides both substantive and procedural legal courses for the agencies.

Assistant Director - Civil Programs

This request is for 1 attorney position, \$112,000 for salary and expenses, and operating expenses of \$43,000 for additional courses. OLE states that USAs from the field can direct work. Program teams in the Department of Justice are continuing to conduct courses for United States Attorneys, and the Department of Justice Litigating Division. OLE uses experienced USAs and Department Trial Attorneys in this capacity in the belief that line attorneys can best translate the needs of the federal litigator into quality training programs.

The OLE employs the use of program teams to develop and execute continuing legal education courses for USAs and Department Litigating Divisions. The teams are comprised of an Assistant Director, Program Manager, and Program Assistant. The Assistant Director is responsible for curriculum development and faculty recruitment. The Program Manager serves as the coordinator and contract officer for the team, while the Program Assistant provides clerical support.

OLE currently has two civil training teams headed by a single Assistant Director, an arrangement that hampers the efficiency of both training teams, because the single Assistant Director position cannot conduct and execute as many courses as the two teams can support.

Due to the increase in recent years of various civil program priorities, e.g., Alternative Dispute Resolution, Affirmative Civil Enforcement, etc., OLE's Assistant Director position dedicated to developing and executing civil programs has been utilized beyond maximum efficiency. One position currently directs the work of two program teams, a situation not found in any other program area. While a single civil Assistant Director might be able to envision enough courses to fill the workload of two training teams, it is not possible for the single civil Assistant Director to execute a double course load, which requires the organization and direction of working groups, faculty recruitment, development of course materials, and site coordination. The nature of developing such training requires daily, sometimes hourly, attention to the majority of details. This requires quick response time on the part of the Assistant Director. Adding a second detailee as an Assistant Director for Civil Programs will result in more rapid course development time and greater program capabilities.

For instance, in FY 1996, the two criminal program teams will conduct 37 courses, while the two civil program teams, with only one Assistant Director, will conduct 36 courses. This discrepancy is due to the fact that United States Attorneys' offices require more criminal training than civil. Because of the inability of the Civil Assistant Director to be on site with two separate teams and coordinate fully the work of both teams adds to the discrepancy. With an additional Civil Assistant Director, OLE could conduct 20 percent more courses (approximately six courses) than currently scheduled and train approximately 330 more students. The additional six courses that could be conducted by adding a Civil Assistant Director would cost \$75,000 per course for a total of \$475,000.

Paralegal/Support Staff Training Team

This request is for 3 positions, \$163,000 for salaries and expenses, and operating expenses of \$1,500,000 for 20 additional courses. IAI is tasked with the training of all paralegal/support staff in United States Attorneys' offices and DOJ Litigating Divisions. OLE employs the use of program teams to develop and execute courses and conduct training. The Assistant Director is responsible for curriculum development and faculty recruitment. The Program Manager serves as the coordinator and contract officer for the team, while the Program Assistant provides clerical support.

An additional training team will be able to develop and execute 20 additional paralegal/support staff courses each fiscal year and train approximately 1,100 additional paralegal/support staff. This would bring the total of paralegal/support staff trained each year to 2,200. With 4,528 authorized paralegal/support staff positions in United States Attorneys' offices alone (thus, not including the Department Litigating Divisions), it would take more than two years to provide one course for each person.

Due to the increase in recent years of various paralegal/support staff program priorities to support the administration's emphasis on support training, OLE's single training team and this activity is taxed beyond its limits. OLE trained the following paralegals and support staff in FY 93-94:

Fiscal Year	Courses	Paralegals/Support Trained
1993	11	596
1994	13	690
1995	16	777
1996	19	1,163

The above figures represent an increase from FY 1993 to FY 1996 of 81.8 percent in the number of courses and an increase of 84.6 percent in the number of paralegals/support staff trained. OLG has achieved these increases without an increase in resources for these programs. Even with this significant increase in courses and students trained, OLE was able to train approximately only one of every 2.2 applicants who applied for paralegal/support staff training courses in FY 1995 (777 trained of 1722 nominated). These additional positions will be able to develop and execute an additional 20 courses and train approximately 1,100 students each fiscal year to meet the increasing demand for such training.

Current paralegal/support staff training courses cost on average \$75,000 per course. These expenses are incurred through such items as travel, per diem for faculty and students, printing of materials, and on occasion, contract faculty. Based on an additional 20 courses executed by a new training team, the total operating expenses needed would be \$1.5 million.

Trial Advocacy Training Team

This request is for 3 positions, \$220,000 for salaries and expenses, and operating expenses of \$900,000 for 12 additional courses. The Office of Legal Education, through the Attorney General's Advocacy Institute, is tasked with the training of all AUSAs and Department Litigating Division Trial Attorneys. OLG employs the use of program teams to develop and execute continuing legal education courses. The teams are comprised of an Assistant Director (an experienced AUSA detailed from the field), Program Manager, and Program Assistant. The Assistant Director is responsible for curriculum development and faculty recruitment. The Program Manager serves as the coordinator and contact officer for the team, while the Program Assistant provides clerical support.

Advocacy courses represent a crucial aspect of a new attorney's training and are currently conducted by the criminal and civil program teams. The courses are of such importance that they require their own team to support advocacy training. With a trial advocacy team, the civil and criminal program teams would be relieved from conducting approximately 12 courses each fiscal year, thereby allowing them to devote more time and resources to substantive legal courses rather than basic trial advocacy courses.

OLE currently conducts an average of 12 basic advocacy skills training courses each fiscal year. These courses teach new AUSAs and Department Trial Attorneys the skills necessary to practice in the Federal courtroom. Courses include skills for attorneys working in criminal, civil, and appellate areas. The civil and criminal program teams currently conduct these advocacy courses in addition to their normal workload related to substantive legal training. As a result, the criminal and civil teams are not able to devote

full time to the ever-changing area of advocacy training. With the advent of computer-based evidence and other technological innovations in litigation, a new training team devoted exclusively to developing training in advocacy skills is essential.

Adding a new team to conduct advocacy training would also relieve the current criminal and civil programs of 12 courses each. With additional operating expenses for this initiative, adding a trial advocacy training team would allow OIG to conduct 12 more substantive legal courses and train approximately 660 more students. These 12 courses would cost approximately \$75,000 per course for a total of \$900,000.

We will measure our success, if provided the resources, by: opening the National Advocacy Center in April 1998 with sufficient staffing and operating expenses in a university-like environment; increasing the number of paralegal/support staff training courses by 20; increasing the number of paralegal/support staff trained by approximately 1,100 people; increasing the number of civil attorneys trained by 330 people; increasing the number of civil training programs offered each year by six; increasing the response time and efficiency of both civil training teams currently in use; increasing both the civil and criminal non-advocacy programs by a total of 12 courses; increasing the number of civil and criminal attorneys trained in non-advocacy programs by 880 people; measuring the rate of student attrition within the training program; and, evaluating the legal proficiency of our attorneys, and the expertise of our paralegal and support positions.

Perms.	Est.	FIS	Amount
--------	------	-----	--------

ACTIVATION OF NATIONAL ADVOCACY CENTER State and Local Training Decision Unit

...	\$2,097
-----	-----	-----	---------

This initiative seeks to provide operating funds for the National District Attorneys Association (NDAA) to implement a continuing education program for local prosecutors and allied professionals at the MAC. The United States Attorneys are requesting \$2,097,000 in support of the NDAA's participation at the MAC.

In 1991, NDAA was invited by the DOJ to participate in the establishment of the MAC which features an integrated instructional and residential facility augmented with student and support services on site. A cooperative agreement was executed between NDAA and DOJ on July 22, 1996. The MAC will provide, for the first time, joint training programs for federal prosecutors, civil government attorneys, and local prosecutors in areas where they have mutual interests, as well as a facility for training programs designed for federal and local prosecutors. The service population is an estimated 23,000 local prosecutors, plus an unknown number of criminal investigators and allied professionals. Annually, 2,000 will participate.

Because of the unique nature of the local prosecutor's role as the chief law enforcement official of a community, NDAA will implement a training program at the MAC consisting of two components: skills building and professional development. The skills building component will enhance prosecutors' skills in analyzing, preparing, and presenting criminal cases. The professional development component will support the

prosecutor's policy making role through special issue conferences, policy development workshops, and working groups. These activities will include participation of law enforcement and other allied professionals as appropriate.

To establish a high-quality education program for local prosecutors at the MAC, NDAA will require additional staff. NDAA does not currently have staff to transfer to the MAC who can design and deliver the contemplated programs. NDAA's two affiliates, the National College of District Attorneys (NCDA) and the American Prosecutors Research Institute (APRI), currently provide training and curriculum development for local prosecutors. The program at the MAC will augment, not replace, programs delivered by NCDA and APRI.

Staff Positions

- Director of Training (DOT) - NDAA will assign a DOT to oversee all activities pertaining to local prosecutor training programs at the MAC. The DOT will report directly to the Executive Director of NDAA and will ensure that the MAC programs are carried out in compliance with the cooperative agreement with DOJ. The DOT will be the main point of contact with DOJ management staff at the MAC.
 - Assistant Director of Training (ADOT) - The ADOT will manage day-to-day activities of NDAA programs at the MAC. The ADOT will participate in planning NDAA programs and will coordinate NDAA activities with DOJ training staff at the MAC.
 - Program Planning Teams - Four training teams will be formed consisting of a program manager and assistant program manager which will be responsible for planning, designing, and delivering all training activities at the MAC. The program manager will be seasoned local prosecutors with training experience including criminal justice education. The assistant program manager will be responsible for coordinating training activities and producing training materials. Two secretaries will provide support for these activities.
 - Accounting Specialist - The accounting specialist will be responsible for maintaining financial records, producing budgets and expenditure reports, and handling accounts payable for all NDAA activities at the MAC.
 - Audio Visual Specialist - An important feature of the MAC is the use of state-of-the-art technology in continuing legal education programs. An experienced technician will be required to operate and maintain audio visual equipment and to train NDAA staff in the use of this equipment.
 - Administrative Assistant - An administrative assistant will provide support to the Director and Assistant Director and maintain personnel records and program documentation.
- Salaries for the staff for half-year are projected at \$445,000 and benefits are projected at \$120,150. NDAA staff at the MAC will receive benefits comparable to those provided to NDAA headquarters staff. Among these benefits are SUTA, workman's compensation, FICA and medicare, health insurance, long and short term disability, and pension which will begin six months after employment. The benefits' cost rate is calculated by dividing estimated benefits' costs by total projected salaries resulting in a rate of 27 percent.

Operating Expenses - \$407,050 (half-year expenses)

Administration of the MAC will require NDAA headquarters staff to provide support to the MAC operations. This support will consist of accounting and financial control, communication with the MAC staff, and official by NDAA executive staff, directing staff and phone calls to the MAC and processing and producing required reports and documentation. In addition, a portion of liability insurance and audit expenses will be allocated for the MAC operations.

Many of the planned training courses will require expert faculty from fields outside of prosecution. NDAA is budgeting 850 days of faculty time at a cost of \$350 per day. NDAA will engage a professional publications design consultant to develop designs and formats for training materials, as well as promotional materials informing local prosecutors, investigators, and allied professionals of programs offered at the MAC.

Other operating expenses will include postage for routine correspondence and promotional materials; telecommunications; printing; supplies; reference materials including books, subscriptions, and software; and equipment to supplement that provided at the MAC.

Participant, Faculty, and Staff Travel - \$1,067,260 (half-year expenses)

Access by local prosecutors to current legal education programs is limited by tight budgets to support travel and subsistence costs. NDAA is requesting funds to cover travel and subsistence costs for prosecutors, allied professionals, and faculty members to participate in training programs at the MAC. Subsistence costs are based on costs of providing lodging and meals to participants while at the MAC and to pay round trip airfare from city of residence to Columbia, SC. In addition, expenses are budgeted for NDAA staff at the MAC to travel to NDAA headquarters in Alexandria, VA, to meetings of the NDAA Board of Directors and other conferences and meetings as necessary.

Candidate Travel and Relocation Expenses - \$37,540

Expenses are budgeted for two candidates for each of the Director, Assistant Director, and four program manager positions to travel to either NDAA headquarters or Columbia, SC, to participate in interviews with members of the NDAA Executive Committee and executive staff. Travel expenses, limited to airfare and a housing allowance of \$83 per day for a maximum of 30 days, will also be paid, if necessary. Individuals selected for the Director, Assistant Director, and the four program manager positions will be reimbursed for costs incurred in moving household items not to exceed \$5,000 per individual.

FREEDOM OF INFORMATION ACT/PRIVACY ACT

Management and Administration Decision Unit	Perm.	MY	Amount
Civil Decision Unit (District of Columbia)	Pos.	2	\$177
Total		2	150
		4	\$337

The United States Attorneys are requesting 8 positions, 4 MY, and \$337,000 to provide information to the public in an open, timely, and complete manner, reduce the backlog of Freedom of Information Act (FOIA)/Privacy Act (PA) requests, comply with the Electronic Freedom of Information Improvement Act of 1996, and assure adequate protection of the Department's and the government's interest in FOIA cases.

Five paralegal positions, 2 MY, and \$177,000 is requested for EOUSA.

Under the provisions of FOIA and the Privacy Act, any person has the right, enforceable in court, to obtain information about the actions of a government agency, unless the information should not be disclosed because of one or more exemptions available under the statutes. Pursuant to the statutes, the federal agency must either provide the information requested, or explain why it will not be provided, within 10 days of receiving the request. EOUSA is responsible for processing all such requests made of the United States Attorneys (except for requests concerning the District of Columbia). If a response is not received within 10 days, the requester may file suit in court. All delays subject us to litigation. If litigation results in obtaining the information, the government must pay attorneys' fees. Excessive delays are subject to investigation by the Office of Special Counsel, at anyone's request.

The litigation caseload has risen from 60 cases in October 1993 to 98 cases in December 1996. A senior attorney was assigned to the staff to increase the number of attorneys available to assist in litigation and legal matters. However, the number of declarations, Vaughn Indexes, and pleadings in March (25) and April (19) 1996 were three times the number of a month in the previous year.

There is no flexibility in responding to court-ordered deadlines, and the attorneys on the staff have much less time to review requests, if they are completely overwhelmed with the litigation. Litigation entails "court-ordered" deadlines for processing, which also delays regular processing.

Litigation costs the entire system. Many of the cases in litigation are brought because of the delays and not because of the final determinations. If the delays in processing could be reduced, the litigation will also be reduced. This is somewhat of a "catch-22" which needs intervention by the addition of sufficient personnel to keep the backlog down.

The courts are continuing to order agencies to assign sufficient resources to meet the statutory 10 day deadline for processing a request. Most courts have been permitting a more reasonable time to respond, but even those decisions are contingent upon the agency having requested in its official budget additional resources to meet the FOIA/PA responsibilities. That contingency will end on October 1, 1997 with the effective date of the Electronic Freedom of Information Improvement Act of 1996, Public Law No. 104-201, when requests must be completed within 20 days and the courts will no longer have the power to extend the

time limits. If the FOIA/PA Staff is unable to meet all deadlines, a likelihood of default exists which may result in release of sensitive records from criminal case files to the requester without opportunity to assert the exemptions available under the statute.

FOIA WORKLOAD

FY	NEW REQUESTS	REQUESTS COMPLETED	PENDING/ BACKLOG
1996	3,420	2,856	970
1997	3,900	3,181	1,689
1998	4,400	3,181	2,908

During FY 1994, EOUSA received approximately 210 FOIA/PA requests each month. During FY 1995, EOUSA received approximately 275 requests per month. This number, in addition to the backlog carried over from the previous FY, resulted in a FY 1995 workload of 4,374 requests. During FY 1996, the level of receipt was 285 per month. We anticipate a receipt of approximately 322 requests per month in FY 1997, and a receipt of approximately 367 requests per month in FY 1998.

Moreover, the complexity of the work is increasing in direct proportion to the complexity of the cases prosecuted and litigated by the United States Attorneys. Processing a FOIA/PA request in a single defendant drug possession case is considerably simpler than processing a request in a multi-defendant drug conspiracy/continuing enterprise case.

Additional resources will be needed to handle the growing request backlog. As shown on the Workload Chart, the workload will be 6,089 in FY 1998 (FY 1997 backlog of 1,689 plus the 4,400 new requests in FY 1998).

Presently, the average number of requests processed in a year by a paralegal on staff is 408. The support staff members are able to process approximately 163 requests each. There are now two attorneys, six paralegals, and 4.5 additional WY assigned to the staff. With the FY 1998 anticipated workload of 6,089 requests, an additional five paralegals are needed.

An additional 3 positions (2 attorneys), 2 WY, and \$160,000 is requested to fund two new attorney and one paralegal position in the Civil Division of the United States Attorney's Office for the District of Columbia.

These positions are needed because recent amendments to the Freedom of Information Act, enacted by Congress through the Electronic Freedom of Information Improvement Act of 1996, Public Law No. 104-231, as well as new statutory provisions affecting FOIA litigation enacted as part of the National Defense Authorization Act for Fiscal Year 1997, Public Law No. 104-201, have created new standards and new issues that will need to be defined and resolved by the Courts in litigation of FOIA cases during the next several years.

As the Civil Division of the United States Attorney's Office in the District of Columbia is responsible for litigating roughly 50 percent of the FOIA cases brought against the government nationwide, an expansion of the Department's FOIA staff would be a logical step in order to ensure that the Department is able to provide adequate protection of the Department's and the government's interests in proper resolution of various legal issues that will predictably arise in FOIA cases under the new statutory amendments.

Justification of Adjustments to Base
(Dollars in thousands)

	Perm Pos.	Work- years	Amount
1998 pay raise			\$13,948
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$13,948,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$11,548,000 for pay and \$2,400,000 for benefits)			
Within-grade increases			1,681
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,380,000 for pay and \$301,000 for benefits.			
Annualization of 1997 pay raise			5,037
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$5,037,000 represents the pay amounts for three quarters of the year (\$4,134,000 for compensation and \$903,000 for benefits)			
Accident compensation			135
This increase reflects the billing provided by the Department of Labor for the actual costs in 1998 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$135,000.			
Administrative Salary Increase			4,056
This request provides for an expected annual pay adjustment of administratively determined salaries for the Assistant U.S. Attorneys occupying ungraded positions in the U.S. Attorneys offices (\$3,326,000 for pay and \$728,000 for benefits = \$4,056,000)			
Mileage allowance rate increase			40
The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$40,000 is requested in 1998 to cover this rate adjustment.

Correspondence Management System An increase of \$33,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.			
Investigation/Reinvestigation Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.			28
Northern Mariana Islands Prior to 1998, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding of \$375,000 is requested to maintain current efforts in CNMI.	3	3	375
General pricing level adjustments This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.			3,061

EXECUTIVE OFFICE FOR UNITED STATES ATTORNEYS

Violent Crime Reduction Program, United States Attorneys

Summary Statement

FISCAL YEAR 1998

The United States Attorneys are requesting, for 1998, a total of 387 positions (including 196 attorneys) 360 workyears, and \$50,828,000. This request represents an increase of 60 positions (including 3 attorneys), 30 workyears, and \$4,700,000 above the 1998 base.

The United States Attorneys are the principal litigators for the United States Government. It is their task to prosecute those who violate our nation's laws, to protect the public from those who would illegally further their private interests at the expense of the general welfare, to protect the legitimate powers of the Federal Government from those who would usurp those powers, and to assert policies established by the Congress, the Administration and the Attorney General.

The United States Attorneys' request consists of two decision units. They are: Criminal Litigation and Civil Litigation. The request for each decision unit is discussed below.

CRIMINAL LITIGATION:

The criminal litigation activity is conducted by 94 United States Attorneys' offices, each of which has the responsibility for the investigation and prosecution of a wide-range of criminal violations. The United States Attorneys' request includes an increase 60 positions (including 3 attorneys), 30 workyears and \$4,700,000 to: continue and increase the success of Operation Ceasefire (Brady Bill) to remove firearms from the streets of the District of Columbia (DC); increase assistance to witnesses and victims of crime; and, enhance prosecutions by adding investigators to DC Superior Court, and relieving an overburdened DC police force that cannot provide adequate investigative support.

CIVIL LITIGATION:

Civil Litigation is conducted by 94 U.S. Attorneys' offices, each of which has the responsibility to protect and advance the interests of the United States government through representation of our client agencies and protection of the United States Treasury from claims against it. The United States Attorneys' request includes no increase for this program.

United States Attorneys
Violent Crime Reduction Trust Fund

Justification of proposed changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Violent Crime Reduction Programs, United States Attorneys

For Activities authorized by sections 4014, 13005, 190001(b), 190001(d) and 250005 of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322) as amended and section 815 of the Antiterrorism and Effective Death Penalty Act of 1996 (Public Law 104-132), [43,876,000] - Vio. remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund, of which \$28,402,000 shall be available to help meet the increased demands for litigation and related activities, \$4,461,000 for Southwest Border Control, \$1,000,000 for Federal victim counselors, and \$9,633,000 for expeditious deportation of denied asylum applicants).

Explanation of Changes:

1. The first change increases the amount available for expenditure in FY 1998.
2. The second change deletes language that created funding for specific programs in prior years.

766

Congressional Appropriation Action on 1997 Request Congress provided an increase of \$5,108,000 in funding from the YCRIF in order to meet increased demands for litigation associated with the Southwest Border and violence against women. The entire amount requested in the Congressional submission was not funded.

BASE PROGRAM DESCRIPTION: The United States Attorneys are responsible for the investigation and prosecution of a wide range of criminal activities. The United States Attorneys receive most of their criminal case referrals from federal investigative agencies or become aware of criminal activities in the course of investigating or prosecuting other cases. They are active in the federal, state, and local criminal justice systems and are involved in the operation of violent crime task forces and other violent crime initiatives. Services and counseling are provided to the victims of violent crimes.

Increase/Decrease

BASE PROGRAM DESCRIPTION: As the attorneys and counselors for the United States, the United States Attorneys do a substantial amount of work in civil litigation. Their workload in the civil field includes providing competent legal representation to aggressively pursue civil enforcement of federal laws and regulations, including immigration laws and regulations. One program of the President's Immigration Initiative is to make timely decisions to those immigrants requesting asylum in this country. This program supports litigation which arises from appeal of Immigration Judges decisions at the Federal Court level.

In-House Investigators

The United States Attorneys request 43 investigator positions, 21 MY, and \$3,289,000 in support of the In-House Investigation Initiative of the United States Attorney's Office, Superior Court Division, District of Columbia to strengthen the investigations of violent criminals prior to trial, in order to produce convincing evidence.

The initial proposal to the Department to hire in-house investigators to assist the United States Attorney's office in its crime fighting efforts was submitted in February 1995, with the application for resources through the Attorney General's Anti-Violent Crime Task Force Fund. Subsequently, in June 1995, the United States Attorney was asked to testify before Congress about public safety issues confronting the District of Columbia.

Representative Fred Heineman (R-MC) was tasked by Speaker Gingrich with assessing the needs of the various law enforcement agencies charged with protecting the citizens of our community, and devising a plan geared towards assisting the agencies with their various missions. This resulted in Representative Heineman offering an amendment to H.R. 2546 (104th Congress) that contained funding proposals for various public safety initiatives, one of which was our proposal for in-house investigators for the United States Attorney's office. Unfortunately, that provision never passed, and we are in the same posture that we were one year ago.

The rationale behind assigning special investigators to our office is clear: the primary means of making the streets of Washington safer is to incarcerate, for lengthy periods of time, those individuals who commit violent crimes; the primary means of incarcerating violent criminals is to have strong evidence against them at time of trial; and the only way to have strong evidence against a violent criminal at time of trial is to have a high quality investigation conducted prior to trial to establish the latter point conclusively. Our present lack of resources for such investigations has resulted in the hiring of investigators, and conducted in the District of Columbia would be significantly improved by the hiring of special investigators assigned to the United States Attorney's office.

Here in Washington, once an arrest is made in a case, the burden of completing the investigation seems to shift to the prosecution. One may argue about the appropriateness of this shifting of responsibility, and we prosecutors have never been particularly comfortable with the arrangement, but the fact remains nonetheless. The only way prosecutors have been able to complete these investigations has been to make personnel plans with the Metropolitan Police Department (MPD) officers and detectives, calling them in to assist, what needs to be done in a case, and then asking them to go out on the streets and complete the required tasks.

This process of bridging the gap between probable cause, which is the level of proof which MPD needs to make an arrest, and proof beyond a reasonable doubt, which we must provide to obtain a guilty verdict in a criminal case, has its difficulties. First, because MPD officers and detectives do not work for the United States Attorney's Office, we can only ask them to take certain investigative steps; we cannot require them to do so. Thus, we have little recourse when the speed with which an investigative task is done, the manner in which it is done, or even the failure to do it at all, is unsatisfactory to us and decreases the chance that we will be able to successfully convict a violent criminal.

Second, the officers and detectives who are called in by prosecutors to complete the investigative process are very often working on overtime. This situation leads to large overtime expenditures by the MPD. For example, in the District of Columbia, by 1994, the MPD was spending over \$10 million each year on overtime. The vast majority of this court overtime expenditure was devoted to paying detectives to conduct follow-up investigations in homicide cases. Therefore, we can anticipate a substantial savings in the police overtime budget if special investigators are assigned to the United States Attorney's Office to conduct follow-up investigations in violent crime cases.

The concept of assigning investigators to a prosecutor's office is not unique. The Manhattan District Attorney's Office has more than 100 investigators; the State's Attorney's Office in Miami has more than 40 investigators, process servers, investigative accountants, and investigative supervisors; and the Middlesex County Prosecutor's Office in New Jersey has more than 90 investigators and investigative supervisors on its staff. These prosecutors' offices are directly comparable to the United States Attorney's Office for the District of Columbia because, unlike any other United States Attorney's Office in the nation, we are prohibited from hiring and employing investigators. We are also prohibited from conducting virtually all adult defendants who commit violent crimes under the District of Columbia Code. To handle these prosecutions effectively, we -- like other big-city prosecutors' offices -- need investigators employed directly by our Office.

To maximize the efficiency and effectiveness of these investigators, they need to be hired by, employed by, paid by and housed at the United States Attorney's Office. Under the provisions of local law, these investigators would instantly have broad -- but appropriate -- authority to conduct investigations on behalf of our Office. District of Columbia Code Section 23-109 states: "Any special investigator appointed by the Attorney General and assigned to the United States Attorney for the District [of Columbia] shall have authority to execute all lawful writs, process, and orders issued under authority of the United States, and command all necessary assistance to execute his duties, and shall have the same powers to make arrests as are possessed by members of the Metropolitan Police Department of the District of Columbia."

We estimate that in order for this new program to be effective, the United States Attorney's Office would need to hire at least 43 investigators. These investigators would be assigned to the following sections in our Superior Court Division: the Homicide Section, the Violent Crime Section, the 5D Community Prosecution Section, the General Felonies Section, the Sex Offense Unit, and the Domestic Violence Unit. In addition, one would be chosen to serve as the supervisory Chief Investigator.

The hiring of special investigators assigned to the United States Attorney's Office will provide a higher quality of investigation in violent crime cases in the District of Columbia and should result in a higher conviction rate. It should also allow the local police department to expend fewer resources on costly police overtime pay, making that money available within the department to meet other critical needs.

We will measure our success, if provided the resources, by the percentage of arrested violators who are convicted.

EXPANSION OF VICTIM AND WITNESS ASSISTANCE SERVICES

The United States Attorney's initiative seeks 11 positions, 6 WY, and \$776,000 to promote the participation of victims and witnesses throughout each stage of criminal justice proceedings.

The Victim-Witness Assistance Unit (VWAU) provides a myriad of services to victims and witnesses of crime, including crisis intervention, referrals for social and mental health services, information on the criminal justice system, assistance with employers and creditors, and court escort to victims of crime. Specialized and more intensive services are provided to crime victims who have experienced domestic violence, child sexual and physical abuse, and rape as well as survivors of homicide. In order to meet the level of need for assistance to victims, the VWAU is in the process of expanding its services to include:

- (1) publication of district-specific materials for victims and United States Attorney's office staff on different types of crime;
- (2) a model advocacy program for child victims;
- (3) a court school for children who have to testify;
- (4) a pro-active approach to risk assessment in domestic violence and stalking cases;
- (5) development and updating of a community resource directory;
- (6) assistance to victims with preparation of Victim Impact Statements and parole notification;
- (7) identification and assistance to children in domestic violence cases;
- (8) reaching out to non-English speaking and hearing-impaired populations; and
- (9) development of more flexible options for witness protection assistance.

The involvement of advocates is important in misdemeanor cases, since the USAS have active caseloads of approximately 2001 cases each and little or no time to contact and assist victims and witnesses. More serious felony cases may be fewer but also require more intensive assistance from advocates.

The 1990 Crime Control Act, the 1994 Violent Crime Control and Law Enforcement Act, and the Attorney General's Guidelines on Victim-Witness Assistance of 1995 contain very specific requirements on how victims and witnesses are to be treated with special emphasis on child victims and victims of sexual assault and domestic violence. In addition, the Violence Against Women Act of 1994 sets forth new federal responsibilities with regard to domestic violence, rape, and stalking cases.

There are a number of factors which impact the ability of the VWAU to meet the current and future needs of the office with regard to victims and witnesses.

The mission of the VWAU is severely hampered by the small number of advocates. Until recently, the VWAU had six victim-witness advocates. The unit added a Child Interview Specialist (CIS) in April 1996 and is in the process of hiring three domestic violence specialists. Despite these additions, the VWAU is still at a deficit with regard to staffing. The current ratio of advocates to attorneys in the office is 1 to 35. The national standard is one advocate to no more than six to eight prosecutors (American Prosecutor's Research Center, National District Attorney's Association, 1992; National Organization of Victim Assistance, 1989.) Experts have recommended a minimum of 20 victim-witness advocates for a prosecutor's office in a city with a population of 500,000 (Albert R. Roberts, HOLDING CRIME VICTIMS RESPONSIBLE, National Institute of Justice, 1990; Victim-Witness Assistance: A Guide for Prosecutors, Bureau of Justice Statistics, Department of Justice, 1994). Five percent of the USAO/DC personnel would be approximately 30 advocates. While many state and local agencies supplement their victim-witness assistance programs with volunteers, the United States Attorneys' office/VWU is unable to match these levels. In addition, the VWAU has one Witness Security Specialist, one Witness Security Assistant, and two witness service coordinators (one for District Court and one for Superior Court). The VWAU also has one victim-witness services assistant who acts as the receptionist for the unit, assists the coordinators with witness travel and lodging, reconciles travel accounts, prepares case dismissal and plea letters for Superior Court, handles time and attendance for the VWAU, and coordinates victim impact statement notices.

The existing caseload of each VWAU advocate is between 85 and 130 cases and consists primarily of homicide cases, domestic violence, child sexual and physical abuse, rape, robbery, kidnapping, and other violent crimes. Even in the most recent year, the number of victims and witnesses who have been traumatized and require intensive support services is increasing. The volume of violent crime victims in the United States Attorney's Office/DC cases precludes the provision of the services to all victims and witnesses.

New initiatives of the United States Attorney's office, such as the new Domestic Violence Unit and the Community Prosecution Section, will need a strong victim-witness component to succeed. The recent creation of the Domestic Violence Unit has resulted in an increased number of cases accepted for prosecution. It is vital that victim advocacy services are available to support domestic violence victims throughout the process. VWAU advocates handle initial interviews of domestic violence victims and so must cover intake of domestic violence cases six days a week and on holidays. It would be impossible to detail even one advocate to the Community Prosecution Project without diverting resources from other victims and witnesses.

In response to the growing number of child victims and witnesses and the recent development of a protocol for identifying child victim cases scattered throughout the Office and referring them to the VMAU, the Office is developing a child advocacy program to ensure that these vulnerable victims receive the intensive support and assistance they need to navigate the criminal justice system. The Crime Control Act of 1990, the Violent Crime Control and Law Enforcement Act of 1994, and the 1995 Attorney General's Guidelines on Victim-Witness Assistance contain very specific requirements on how victims and witnesses, particularly children, are to be treated. These provisions also require that our office participate in multi-disciplinary teams. The new domestic violence plan being implemented by Superior Court contains a requirement that children in domestic violence cases be identified at intake and provided with services. We estimate that approximately 65-70% of domestic violence cases in the Office involve children who are witnesses to or victims of the violence.

Currently, this Office does not have the ability to provide consistent notification services for victims and witnesses. Primarily because it lacks the staff to handle this task. Surveys of victims and witnesses have identified the need for a program to provide consistent notification services to victims of the status of and significant events related to their case (National Victims Center, 1991). This Office has made a commitment to notifying victims and survivors of their right under the law to present a victim impact statement at the time of sentencing (Section 23-103a of the D.C. Criminal Code) and to assist them with developing their statements, but current staffing levels makes it difficult to fulfill this commitment. Working with a victim to obtain a good statement requires between two and six hours of work. Many victims have language or literacy issues that are a barrier to writing statements, and VMAU staff must type or translate for them. The potential number of victims eligible for assistance with the development of Victim Impact Statements may be as high as 8,000 to 9,000. Simply managing the flow of Victim Impact Statements has become a full-time job.

The USAO and the Superior Court Probation Department worked out new procedures to ensure that victims of crimes have the best opportunity to provide a written victim impact statement at the time of sentencing. This primary responsibility is currently being handled by the USAO/VMAU. The USAO/VMAU has significantly increased the workload of the person currently handling this task. If the USAO/VMAU could significantly increase the workload of the person currently handling this task, this would be a full-time job. The District of Columbia has a new crime victim compensation program. A second victim services assistant would enable the VMAU to help victims prepare and follow up on compensation claims as well as assistance with parole notification registration and property return.

The prosecution efforts of this Office are often hampered by the problem of intimidation of and retaliation towards witnesses. VMAU staff researched and developed a detailed proposal in response to the long-recognized need of the Office to have a more flexible option to provide assistance to threatened witnesses who do not want or require either the Witness Security or the Superior Court Informant Program run by the U.S. Marshall Service. EOUSA, with the assistance of the USAO/DC, designed and received funding from Congress for the Emergency Witness Assistance Program (EWAP). This proposal is modeled after successful programs run out of several large district attorney offices around the country and will operate initially as a pilot program. This program will not only protect witnesses and their families but would provide limited assistance for emergency shelter and to help witnesses relocate themselves.

The cases handled by the United States Attorney's Office/DC consist of a wide variety of ethnic and other victim populations. We have a number of Asian-Pacific American and other immigrant victims and witnesses, elderly victims, and hearing-impaired victims. The presence of Gallaudet University and its associated primary and secondary schools ensures that this Office works with many hearing impaired children and young adults. Finding translators who are fluent in American sign language, in a timely fashion, is often difficult. Expertise in working with these special victim populations does not currently exist within this Office.

Based on these factors, there is a need for glaven new VMAU staff to be used as follows:

Two additional domestic violence specialists: The creation of both the USMO Domestic Violence unit and the integrated domestic violence intake center at Superior Court has resulted in an increased number of incoming cases and responsibilities for the USMO victim advocates. The three new VMAU-funded advocates will take over the intake and handling of all family violence cases. It has already become clear that this unit has been overwhelmed. It is estimated that the unit has handled more than 1,000 cases. The advocates will be more than 6,000 in the first year that is 2,000+ cases per year per advocate. The new domestic violence services program calls for early identification of and intervention with children of battered women. One of the current senior advocates has been selected to oversee the domestic violence advocacy program, which includes training new staff, developing and supervising an intern program using local social work and psychology students, and representing the USAO on a variety of task forces and committees related to domestic violence. At least two (2) additional advocate specialists are needed to effectively meet the needs of domestic violence victims and their children.

One advocate to work with the Community Prosecution Section: The advocate would spend a considerable time on-site in the 5th District assisting victims and prosecutors with both victim services and quality-of-life issues. The advocate would network not only with local community groups in the 5th District but with victim service providers throughout the Washington, D.C., area.

Three child victim specialists: The CIS conducts or assists with interviewing child victims and witnesses, conducts psycho-social assessments of child victims, and provides consultation to Assistant United States Attorneys and assistance in preparing children to testify in court. The services of the CIS are not limited to USMO cases but are also offered to law enforcement officers in the investigative stage of child cases as well as to the other local agencies involved in the Children's Advocacy Center multi-disciplinary team. Experts recommend that interview specialists limit the number of interviews to no more than six-to-eight per week. The USMO has found the services of the CIS to be invaluable not only in child sexual abuse cases but also in physical abuse cases and in cases where children have witnessed homicide or other severe violence. Child victim cases are time and resource intensive. In order to implement the new office-wide child protocol, operate the Court School Program for child witnesses, and ensure that child victims and witnesses receive the specialized services they need, the VMAU needs three additional child victim specialists, including a second interview specialist. It would also enable the CIS to provide training and technical assistance to other USMOs and federal law enforcement agents on interviewing child victims and witnesses.

Two victim services assistants: The USNO and the Superior Court Probation Department worked out new procedures to ensure that victims of crime have the best opportunity to provide a written victim impact statement (VIS) at the time of sentencing. The primary responsibility for the new system lies with the USNO/VMAU and has significantly increased the workload of the person currently handling this task. As the USNO has come into full compliance with the new system, handling VIS notification and coordination has become a full-time job. The District of Columbia has a new crime victims compensation program. A second victim services assistant would enable the VMAU to help crime victims prepare and follow up on compensation claims, assist with parole notification registration and property return, and update the community resource directory.

Two adult sexual assault victim specialists: The Violence Against Women Act of 1994, as implemented in the District of Columbia, has focused almost exclusively on victims of battering. Adult sexual assault victims face some difficult and specific challenges in the criminal justice system and in the healing process. It would be a great advantage to both the victims and the prosecutors handling these cases to have specialists with whom they could work on a consistent basis. These specialists would also develop and maintain close liaison with the local Rape Crisis Center and provide or coordinate court accompaniment for sexual assault victims. The USNO would make an effort to ensure that one of these positions is filled by someone trained in American Sign Language.

One federal victim specialist: The USNO/VMAU has a victim-witness coordinator who handles requests for translators, travel and lodging for out-of-town witnesses, and other logistical or notification services. However, the coordinator does not have the training and specialized experience to provide counseling and advocacy services for victims. The District of Columbia would like to have a federal victim specialist who could be called upon as often as needed in our District Court Districts to fulfill a "victim need." It is anticipated that the person selected for this position would have the experience and language capacity to work with Asian Pacific Islanders.

Hiring Domestic Violence Advocates will finally enable us to adequately service the vast numbers of domestic violence victims we see each year. It will also free up our existing advocates to focus on areas that are more appropriate to their skills and training and are also in desperate need of attention.

The central concept of community prosecution involves a holistic approach to community safety. Trying to do community prosecution without providing increased services to victims and witnesses ensures only limited success. The development of community-based victim advocacy and services program as part of the Community Prosecution Project would provide invaluable assistance in addressing the aftermath of crime in the community as well as quality-of-life issues.

The addition of a significant number of advocates to our staff should result in a higher conviction rate. Recent studies by the National Institute of Justice (National Assessment Program, 1994 Survey Results), American Prosecutors Research Institute (Prosecutor's Perspective, 1993), the University of Texas, and the Crime Victims Research Center-Medical School of the University of South Carolina indicate that the involvement of victim advocates in cases increased the percentage of guilty verdicts after trials. This was particularly true for cases prosecutors described as the most difficult and time-intensive, such as child abuse, rape, and domestic violence. In one major study the conviction rate for child sexual abuse

cases almost doubled, from 38 percent to 74 percent after the implementation of child victim advocacy programs. The proportion of offenders receiving a prison sentence almost doubled, from 25 percent to 48 percent. "An Analysis of the Prosecutorial Effects of a Child Sexual Abuse Victim-Witness Program," Debra Dible and Raymond H. Teske, Jr., *Journal of Criminal Justice*, Vol. 21, 1993, pp. 79-85.)

This Office would be able to make significant progress toward providing timely and effective notification to victims and witnesses regarding the status of their cases. Providing adequate and timely notice would assist both witnesses and AUSA's, reduce victim frustration with the criminal justice system, both of which may result in an improved case outcome.

Assistant United States Attorneys and Advocates have seen firsthand and heard from judges how effective a good victim impact statement can be. It is even more important since the District of Columbia Board of Parole has indicated their desire to have the original victim impact statements to review at the time of parole hearings and revocations.

The ability to hire advocates to work with certain special populations prevalent in the District of Columbia area would greatly enhance the ability of this Office to meet the needs of a greater proportion of District of Columbia citizens and visitors and help ensure the cooperation of victims and witnesses who may be reluctant to participate in the criminal justice system for cultural or other reasons.

We will measure the success in this program, if provided the resources, by timely notification to victims and witnesses of rights, participation in hearings, assistance to threatened victims and witnesses, and ensuring the cooperation of reluctant victims and witnesses.

OPERATION CEASEFIRE (Brady Bill)

The United States Attorneys request 6 positions (3 attorneys), 3 Ws, and \$635,000 to reduce Violent Crime in the District of Columbia through prosecution in Superior Court, and U.S. District Court where appropriate, and, to decrease the numbers of firearms available for use in acts of violence.

On March 10, 1995, a comprehensive law enforcement initiative entitled Operation Ceasefire was jointly announced by the United States Attorney's, the Metropolitan Police Department (MPD), and the Bureau of Alcohol, Tobacco and Firearms. The paramount objective of this initiative is to significantly reduce the occurrence of gun-related violence within the District of Columbia. The Ceasefire partners have joined forces to take the following steps:

- Decrease the number of illegal firearms on the streets of the District of Columbia by increasing efforts at interdiction and the seizure;
- Increase the penalties for firearms related offenses;
- Improve the intelligence base for law enforcement by requiring a debriefing as a condition precedent to plea negotiations; and,

- Educate young people about the dangers associated with firearms through outreach programs in schools and other organizations.

Since the inception of Operation Ceasefire, firearm seizures have increased to record levels and legislative initiatives have increased in the statutory penalty for pistol possession from a misdemeanor to a felony charge. However, due to limited staff at the United States Attorney's Office, Operation Ceasefire has fallen short of meeting its goals in the area of education. In the future, we expect to create an Intelligence Bank and educating young people about the destructive power of firearms.

Additional resources -- three attorneys, two paralegals, and one support staff -- should be devoted to Operation Ceasefire in order to properly prepare and conduct effective debriefings and disseminate information to other branches of law enforcement. Additional resources will also be used for intelligence gathering, proactive investigations and community involvement.

Additional AUSA assigned to Operation Ceasefire and a minimal support staff will be capable of effecting a significant reduction in violent crime. A successful interview and, in many cases, proactive cooperation with law enforcement will be a condition precedent to the extension of a plea offer in every gun case. Newly discovered witnesses to violent crime and the additional intelligence gathered through these interviews will then be disseminated to the appropriate law enforcement agency and to AUSA's. Moreover, this office will take these active role in the investigation of the proliferation of firearms in the District of Columbia.

Commitment of additional AUSAs and support staff to this initiative will have the net effect of increasing the efficiency of AUSAs in trial preparation and strengthening the evidence in their cases. Stronger cases will increase the number of pretrial dispositions, maximize the number of convictions and ultimately reduce caseloads, while making our streets safer.

	Perm. Pos.	Work- years	Amount
1998 pay raise			365
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay pay adjustments as well as the general pay raise. The amount requested \$365,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$299,000 for pay and \$66,000 for benefits)			
Annualization of 1997 pay raise			151
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. The increase includes locality pay adjustments as well as the general pay raise. The amount requested \$151,000, represents the pay amounts for three quarters of the year (\$124,000 for compensation and \$27,000 for benefits)			
Annualization of 52 additional positions approved in 1997		29	2,565
This provides for the annualization of 52 additional positions provided in the 1997 enacted budget for the Southwest Border initiative.

FOREIGN CLAIMS SETTLEMENT COMMISSION
OF THE
UNITED STATES

Olivia A. Rios
OLIVIA A. RIOS, CLU

Foreign Claims Settlement Commission
Activities and Expenses
Summary Statement
Fiscal Year 1998

The Foreign Claims Settlement Commission is requesting a total of 31 permanent positions, 31 workyears, and \$1,326,000 for 1998. This request represents a net increase of 3 positions, 2 workyears and \$273,000 from the 1997 appropriation.

The Commission consists of a Chair and two part-time Commissioners, who are appointed by the President with the advice and consent of the Senate. The part-time Commissioners receive compensation at the Executive Level V rate of pay for performance of official business of the Commission at the direction of the Chair.

The principal mission of the Commission is to adjudicate claims of U.S. nationals against foreign governments, under jurisdiction conferred by the International Claims Settlement Act of 1949, as amended, and other authorizing legislation. To date, the Commission has compiled and evaluated such claims against 17 countries: Yugoslavia, Panama, Bulgaria, Romania, Italy, the Soviet Union, Czechoslovakia, Poland, Cuba, China, the German Democratic Republic (East Germany), Vietnam, Ethiopia, Egypt, Iran, and Albania.

The operating expenses of the Commission ultimately are borne only partially, if at all, by the taxpayer. In virtually all instances, the legislation authorizing the adjudication of claims has provided for deduction of a percentage of the funds obtained from foreign governments for payment of the claims due to the credit of the United States. In the United States, it is necessary to delay the adjudication of claims until the claims have been paid by the foreign government. In 1950, the Commission received the first claim, which amounted to approximately \$10 million, but during that same period the amounts paid into the United States Treasury as a result of claims programs have been in excess of \$22 million.

In 1998 the Commission will be required to assist the Department of State in negotiating a lump-sum settlement of the 250+ claims by U.S. nationals against Germany for internment in Nazi camps during World War II, previously adjudicated by the Commission in 1997 under Public Law 104-19 and the U.S.-German claims settlement agreement of September 13, 1993. In addition, the Commission will continue to receive and evaluate claims against the former German Democratic Republic (East Germany). The Commission also will be required to research and respond to requests for information concerning properties appropriated by the Castro regime in Cuba, in support of the Iemurite authorized by the new Helms-Burton Act, and to serve as Special Master for the federal courts (to make determinations on ownership and valuation of properties in Cuba, for use in lawsuits), as provided by the Helms-Burton Act. (The Congressional Budget Office initially estimated that 15,000 to 20,000 such cases could be filed, more recently, the State Department has projected the number of lawsuits at 75,000 to 200,000.) Finally, the Commission is registering claims and engaged in other preliminary planning for a major program involving thousands of claims against Iraq, and the Commission provides continuing technical assistance to the Department of State conducting ongoing government-to-government claims negotiations, as requested by the Department.

Under the War Claims Act of 1948, as amended, the Commission will continue to have authority to award compensation to American military prisoners of war held in Southeast Asia during the Vietnam conflict, or their survivors, for inadequate rations and inhumane treatment while in captivity.

The Commission will continue to furnish information contained in the records pertaining to the 43 completed international and war-related claims programs administered by the Commission. The Commission will continue to provide advice on policy determinations, preliminary planning, evaluation of pending claims legislation, and liaison with Congressional committees considering legislation intended to provide for adjudication of additional types or classes of claims.

Foreign Claims Settlement Commission
Salaries and expenses
Justification of Proposed Changes in Appropriation Language

The 1938 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Foreign Claims Settlement Commission
 For expenses necessary to carry out the activities of the Foreign Claims Settlement Commission, including services as authorized by § 5 U.S.C. 3109, [§§31,000] _____ \$1,216,888

23 U.S.C. 1621-1643; 50 U.S.C. App. 2801-2817; P.L. 104-33, P.L. 104-114; Dept. of Justice Appropriations Act, 1997.

Explanation of changes:

No substantive changes proposed.

Congressional Action on 1937 Request.

Congress provided \$75,000 above the 1937 President's budget request to support a new Holocaust Claims Program, authorized by the January 26, 1948 enactment of Public Law 104-93 (the Balanced Budget Compromise Act of 1948). The program was designed to enable the Commission to adjudicate the claims of U.S. citizens against Germany for persecution by confinement in concentration camps and under comparable conditions before and during World War II.

Korean Claims Settlement Commission
Salvage and Assistance
Program Performance Information
Government Performance and Results Act Requirements

Mission:

To protect the rights of U.S. citizens abroad and promote the international rule of law through adjudication of claims by United States nationals against foreign governments.

Organizational Goals:

- . To assist the Department of State in negotiations for the settlement of claims against foreign governments, including, in particular,
 - claims of U.S. survivors of the Holocaust against the Federal Republic of Germany, for internment in Nazi concentration camps;
 - claims of U.S. nationals against the Federal Republic of Germany for property expropriated during the Communist era in the German Democratic Republic (East Germany); and
 - claims against Russia and the other original constituent republics of the former Soviet Union, which were adjudicated under Public Law 105, 86th Congress.
- . To research and respond to requests for information concerning decisions in the Commission's Cuban Claims Program (conducted from 1961 to 1964) and requests for review of past court awards to be filed under Title III, section 102 of the new Helms-Burton Act.
- . To serve as Special Master at the request of the federal courts in Cuba, for use in federal court lawsuits to be brought by Cuban-Americans beginning in March 1991, as authorized by Title III, section 102 of the new Helms-Burton Act.
- . To award compensation to American POWs held in Southeast Asia during the Vietnam conflict, or their survivors, for inadequate rations and inhumane treatment while in captivity.
- . To conduct preliminary planning for pending new programs, including continued registration and planning for adjudication of the hundreds of claims in outstanding claims against the Government of Iraq.
- . To advise other departments and private attorneys on pending claims against the Government of Iraq.
- . To advise on policy determinations relating to the settlement of international claims.
- . To assist the Department of the Treasury in making distribution on past awards certified by the Commission.
- . To provide executive departments and private attorneys with legal precedents issued by the Commission.
- . To provide general information concerning past programs and to respond to requests about specific decisions the Commission has made on past claims.

Main Program Description:

In addition to its principal function of adjudicating United States nationals' claims against foreign governments, the Commission provides continuing informational services to claimants (and, where applicable, their legal successors) with regard to the 41 completed international and war claims programs it has conducted. It also provides advice on policy determinations, preliminary planning, and evaluation of proposed legislation intended to authorize adjudication of claims of new categories of claimants, and liaison with Congressional committees considering such legislation.

**Foreign Claims Settlement Commission
Balances and Expenses
Fiscal Year 1998
(Dollars in thousands)**

Program Changes	Amount
Hiring of two additional attorneys	\$115
<p>The Commission is requesting resources to fund costs associated with hiring two additional attorneys needed to support the Commission's growing caseload and responsibilities in claims programs including the Holocaust Survivors Claims Program, and the ODA Property Claims Program, as well as planning for an Iraq Claims Program, and support for implementation of the new Helms-Burton law. These funds will be expended in object classes 11.0, Personnel Compensation, and 11.1, Personnel Benefits.</p>	
Relocation of Commission Offices	131
<p>The Commission is requesting a program increase of \$115,000 to cover the costs of relocating the offices of the Commission during the first part of FY 98. Relocation is necessary to enable the Commission to serve the public more effectively and to work more closely with other government agencies with international missions. These funds will be expended in object classes 21.1, Rental Payments to GSA, and 21.6, Other Services.</p>

Amount

Mandatory Increases:		
1. 1988 pay raise	This request provides for the proposed 2.9 percent pay raise to be effective in January of 1988 and is consistent with Administration policy included in the 1988 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$14,000, represents the amount requested for the first quarter of the fiscal year plus appropriate benefits (\$14,000 for pay and \$4,000 for benefits = \$18,000).	118
2. Annualization of 1987 pay raise	This pay annualization represents first quarter amounts (October through December) of the 1987 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$4,000, represents the pay amounts for three quarters of the year (\$3,000 for compensation and \$1,000 for benefits).	4
3. Within-grade increases	This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$4,000 for pay and \$1,000 for benefits.	5

UNITED STATES MARSHALS SERVICE

**United States Marshals Service
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

For 1998, the United States Marshals Service (USMS) requests a total of 4,106 permanent positions, 3,916 workyears and \$475,244,000. This request represents a net decrease of 18 positions and a net increase of 9 workyears and \$17,743,000 over the 1997 enacted appropriation, and a net increase of 108 positions, 89 workyears and \$19,603,000 over the 1998 base. The net change is due to a transfer of 126 positions, 126 workyears and \$14,203,000 from direct to the Violent Crime Reduction Programs appropriation.

The USMS is facing the most challenging time in its history. The workload has been changing dramatically due to the cases being prosecuted in the federal courts today. The cases are not only complex, involving multiple defendants and more dangerous criminals. The Wild Trade Center bombing trial is an example of the type of case that is becoming more common in the federal courts. The Marshals Service is deeply involved in the Oklahoma City bombing trial, both in the protection of the judicial family in Denver while at the same time protecting the defendants and their rights. As the prosecution of illegal aliens increases through such efforts as Operation Gatekeeper in the Southwest border states, the USMS is facing critical detention space shortages in the Southern District of California and District of Arizona.

The most significant portion of the request is for 53 positions, 41 workyears and \$10,759,000, to provide the personnel and equipment necessary to ensure that new and renovated federal courthouses can open on schedule. The Marshals Service's primary mission is to protect the federal judiciary and court proceedings. The USMS is dependent upon the timely coordination and implementation of the established safety and security requirements for the construction of detention, prisoner movement and related high security areas.

The USMS is mandated to perform a broad scope of law enforcement missions in support of the activities of both the Executive and Judicial branches of the government. As provided in the Marshals Service Act of 1988, "It is the primary role and mission of the U.S. Marshals Service to provide for the security and to obey, execute, and enforce all orders of the United States District Courts, the United States Courts of Appeals and the Court of International Trade." The Service's workload demands are levied by the federal courts, other Department of Justice components, and other federal law enforcement agencies.

This submission is designed to assure a balance between program and fiscal requirements. The requested program increases are necessary to fulfill ongoing, essential requirements. Program requests are firmly rooted in legislative or regulatory mandates that must be observed. Increases are necessary for the operational mission and to achieve the economies of scale necessary to reduce overall expenses. The tools that deputies use -- guns, radios and vehicles -- must be properly maintained, and the deputies must continue to meet established standards in order to continue to use them. Failure to do so could jeopardize judicial security and result in significant loss of life.

**United States Marshals Service
Salaries and Expenses**
Justification of Proposed Changes in Appropriation Language

The 1997 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses, United States Marshals Service

For necessary expenses of the United States Marshals Service; including the acquisition, lease, maintenance, and operation of vehicles and aircraft, and the purchase of passenger motor vehicles for police-type use, without regard to the general purchase price limitation for the current fiscal year, [\$457,495,000] ▲ at \$475,244,000 authorized by 28 U.S.C. 561(f); of which not to exceed \$6,000 shall be available for official reception and representation expenses; and of which not to exceed \$4,000,000 for development, implementation, maintenance and support, and training for an automated prisoner information system, [and] ▲ \$2,200,000 to support the Justice Prisoner and Alien Transportation System. ▲ shall remain available not to exceed and not to exceed \$2,300,000 for above standard construction costs for prisoner detention areas.

remain available until expended; Provided, That, [with respect to the amounts appropriated above] ▲ the service of maintaining and for fiscal year 1998 and thereafter

and transporting State, local, or territorial prisoners shall be considered a specialized or technical service for purposes of 31 U.S.C. 6505, and any prisoners so transported shall be considered persons (transported for other than commercial purposes) whose presence is associated with the performance of a governmental function for purposes of 49 U.S.C. 40102(f). Provided further, That not to exceed 12 permanent positions and 12 full-time equivalent workyears and \$700,000 shall be expended for the Offices of Legislative Affairs and Public Affairs: Provided further, That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or nonreimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis).

(18 U.S.C. 1963, 3053, 3059, 3192, 3521-3528, 4008 19 U.S.C. 1613; 21 U.S.C. 881; 28 U.S.C. 510; 524, 561-562, 565, 567, 569-572, 1921; 48 U.S.C. 1424(b), 1614(c), 1694(b) (3); Department of Justice Appropriations Act, 1997.)

Explanation of Changes:

1. The first change would allow \$2,300,000 for construction of prisoner detention areas to remain available until expended.
2. The second change would make language, enacted in 1997, permanent.
3. The third change would delete language limiting the Legislative and Public Affairs Offices.

Total												

Congressional Appropriation Action

The Senate recommended a decrease of 91 positions, 168 workyears, and \$32,087,000 below the President's budget request level.

Transfers

The increase of \$340,000 is a transfer from the HETA program.

Technical Adjustment

The increase of four positions and four workyears resulted from the disestablishment of the U.S. People's Commission. The increase of four positions and four workyears in Management and Administration are from the disestablishment of the Community Relations Service.

Reprogramming

The reprogramming moved resources between decision units to accurately display the utilization of the resources provided the USMS.

MISSION: It is the mission of the United States Marshals Service (USMS) to protect the federal courts and ensure the effective operation of the judicial system.

ORGANIZATIONAL GOALS:

1. To protect judges and other participants in the judicial process.
2. To provide for the security of federal court facilities.
3. To execute court orders, including certain arrest warrants and the seizure, maintenance, and disposal of assets.
4. To provide for the secure confinement, transportation, and production of prisoners for judicial proceedings.
5. To assure the long-term safety of government witnesses.
6. To collect fees, make payments in support of prisoners in non-federal institutions, and disburse funds as directed by the Attorney General.
7. To carry out the directives issued by the Attorney General.

BASE PROGRAM DESCRIPTION: The framers of the Constitution intended that the American public should look to the federal judicial system as one that is open, secure, and free from corruption. Making this possible has been the historical role of the United States Marshals. In support of this core mission of the U.S. Marshals Service (USMS), the Judicial Security Program maintains the integrity of the judicial process by: 1) ensuring that each of the more than 500 federal judicial facilities are secure -- both physically safe, and free from intrusion by technological devices designed to subvert the courts' proceedings; 2) guaranteeing that all federal judges, magistrate judges, bankruptcy judges, prosecutors, witnesses, jurors and other participants can conduct uninterrupted proceedings in an open, safe environment; and, 3) limiting opportunities for criminals to tamper with evidence or use intimidation, extortion, or bribery in attempts to corrupt judicial proceedings.

To ensure that judicial proceedings and other court activities occur in a safe and secure environment, the USMS manages a national database of facility security profiles for each federal courthouse. Each year, USMS managers in the district offices complete updates of the profiles maintained for each facility housing judicial officers and forward the information to the Judicial Security Division. The Judicial Security Division evaluates the submissions and enters the information into the database. By querying the database, the Judicial Security Division can produce a national schedule of deficiencies and resource needs. As a result, plans for corrective action are developed and presented to the Director and his senior staff for review and approval before being included as part of budget requests for additional resources.

Certain trials and related court proceedings need to be supported by more than normal levels of security to prevent disruption. Such cases are identified through the district's assessment of facility security requirements. Where the situation is deemed high risk, the district develops an operations plan at least seven days before the anticipated commencement of the trial. Should the situation be regarded as an extraordinary high risk (the upcoming Oklahoma City bombing trial, for example), Court Security Inspectors review or prepare operations plans at least 30 calendar days before the trial. The supplemental staff and other resources identified as needed by the approved operations plan are provided through the USMS Special

Assignments process. Once the trial is complete, an after action review results in a report on the effectiveness of the operations plan during its application.

Recently, population increases or shifts, along with new legislation enacted by the Congress, have combined to create congressionally recognized requirements for additional federal courthouses. As a result, new courthouse construction and renovation have become major workload generators and will continue to be in the future. Much of this future construction will be needed to provide courthouses for additional bankruptcy and magistrate judges, for new district judges, and for senior judges who continue to preside over judicial proceedings. The USMS is required to provide the same level of protection and security for all new judicial officers and additional facilities. USMS staff will need to monitor the new and changing requirements, provide technical advice and assistance to the judiciary on security procedures, and evaluate, obtain, deploy, and operate state-of-the-art security equipment.

Several new and renovated courthouses will require additional USMS personnel to insure the same level of security currently found in federal courthouses. Because judges have the statutory authority to require the presence of a Deputy U.S. Marshal (DUSH) at any criminal or civil proceeding, (even if other deputies are already present to guard prisoners), an increase in the number of judges is expected to increase USMS workload in the courthouses. If additional DUSHs are not authorized for judicial security, the Director of the USMS will be unable to recommend to the Attorney General that the new facilities be opened.

It is the responsibility of the USMS to assure that courthouses and other work spaces are clear of electronic monitoring or interference devices, thus ensuring safe and secure business operations. Upon request, the Court Security Inspectors provide electronic countermeasure services in connection with Classified, Information Protection Act (CIPA) hearings, and other electronic support to further secure the courts.

The Witness Security function provides protection to government witnesses and their families when their lives become endangered because they have agreed to provide critical information concerning organized criminal activity, terrorism or other serious criminal enterprises. This protection is provided 24 hours a day, 7 days a week, while they are in "threat" environments, and when they return to a danger area for trials or other court appearances. The Witness Security staff administers all matters relating to new identities, relocation, and program services to the witnesses and their family members.

The Special Operations Group (SOG) is a specially trained and equipped unit deployed in high-risk law enforcement situations. The primary mission is support of districts and headquarters operational divisions. The secondary mission is tactical support of USMS initiatives during national emergencies, civil disorders, natural disasters, or as ordered by the Attorney General, Director, Deputy Director or their designees.

At present, SOG has eight full-time operational and four administrative employees at the Special Operations Group Tactical Center in Louisiana. SOG consists of 3 Task Forces with approximately 25 members in each group. These members are volunteers who have met the USMS and SOG standards of physical fitness, mental ability, and strength of character. They are on-call 24 hours a day and can be assembled anywhere in the

United States fully equipped, self-supporting, and operationally ready. SOG members perform the full range of deputy duties in their respective districts when not engaged in SOG activities. SOG is authorized and responsible for the selection and use of its own weapons, ammunition, special munitions, diversionary devices, and non-lethal weapons.

The **Prisoner Security** function ensures the custody, protection and safety of all federal detainees throughout the federal judicial process. Included in this vital program are the following essential responsibilities: 1) maintaining custody of federal prisoners while in court and in standby situations; 2) providing in-district transportation of all federal prisoners to support productions to and from all court and court related proceedings, for meetings with attorneys, for medical appointments and all other court ordered appearances; and 3) the receipt and processing of all federal detainees which includes receiving prisoners into USMS custody, processing them through district offices, federal institutions and contract jails, and all other functions related to the acquisition of bedspace to support the federal detainee population. In FY 1996, the USMS received over 98,000 prisoners into custody, resulting in an average daily population in USMS custody of 23,200 prisoners, making it the 17th largest correctional population in the United States. Additionally, in FY 1996 the USMS carried out nearly 380,000 prisoner productions, excluding the largest district -- D.C. Superior Court.

ACTIVITY: JUSTICE PRISONER AND ALIEN TRANSPORTATION SYSTEM (JPATS)

	Para	FY96	Amount
1997 Appropriation Enacted	208.	225	\$51,459
1998 Base	212	225	52,268
1998 Estimate	212	225	52,268
Increase/Decrease	\$00

BASE PROGRAM DESCRIPTION: This program supports the federal judicial system by the nation-wide scheduling and movement of all prisoner transportation under the Justice Prisoner and Alien Transportation System (JPATS). The term prisoner includes all federal prisoners (sentenced prisoners, pretrial and military detainees), whether in the custody of the USMS, Bureau of Prisons (BOP) or Immigration and Naturalization Service (INS). On a space available basis, the Department of Defense (DOD) military prisoners and non-civilian federal prisoners (state and local) are transported. JPATS was created to enhance scheduling efficiency by combining personnel, fleets and equipment, thereby allowing for the movement of increased numbers of prisoners and detainees. The program consists of the Air Operations function (which includes the former INS Detention and Deportation Air Transportation Branch), the Prisoner Transportation function and the USMS districts.

The **Air Operations** function is based in Oklahoma City, OK, with operating locations at Alexandria, Louisiana; El Paso, Texas; and Anchorage, Alaska. The aircraft fleet consists of 13 aircraft: three B72's, one DC-9, four Sabreliners, one Lear 25D, two Conquairs, one Cessna 185 and one Piper Cheyenne. Air

Operations is responsible for the efficient movement of prisoners and detainees by DOJ owned or leased aircraft. In addition, Air Operations is responsible for coordinating with the Public Health Services (Department of Health and Human Services) to provide medical consultation and in-flight medical services to prisoners. Air Operations also develops and coordinates a strategic plan to replace and modernize the aircraft fleet to support growing demands for transportation and to support DOJ initiatives.

The number of alien movements by airlift increased by 20,983 during FY 1996, a 203 percent increase over FY 1995. It is estimated that 35,000 aliens will be transported by JPATS aircraft in FY 1998. Based on a two-year average increase of 5 percent a USMS Prisoner movements, plus the estimated increase of 3,000 additional alien movements, the total JPATS movements are projected to be 195,359 in FY 1997 and 206,167 in FY 1998.

The **Prisoner Transportation** function, located in Kansas City, Missouri, is responsible for scheduling the transportation of prisoners/detainees. Ground and air prisoner movements are established and coordinated with the FBI, BOP, the Department of Energy, and the U.S. Customs Service. Prisoner transportation also manages the Centralized Ticketing Program which is used to purchase low cost commercial airline tickets when large numbers of personnel need to be moved quickly. The Centralized Ticketing Program provides low government fares at substantial savings to the Service.

USMS Districts make up the final segment of JPATS as deputies utilize buses, vans and cars to move prisoners between nearby districts, or to meet scheduled flights for BOP and INS prisoners. Deputies are also responsible for transporting prisoners to and from BOP and INS facilities to meet judicial requirements such as court order execution, prisoner population management or medical isolation.

ACTIVITY: FUGITIVE APPREHENSION

	Firm	FTE	Amount
1997 Appropriation Enacted	604	604	60,924
1998 Base	619	604	62,216
1998 Estimates	632	624	67,161
Increase/Decrease	40	20	5,145

BASE PROGRAM DESCRIPTION: The USMS acts as the "sheriff" in the federal criminal justice system and is the only federal agency primarily responsible for the apprehension of fugitives from justice: escapees, bail jumpers, parole and probation violators. The USMS uses various methods to reach beyond the boundaries of the United States in the apprehension of fugitive felons and is a member of the International Police (INTERPOL). Such representatives are stationed in France and at the National Central Bureau in Washington, D.C. The USMS supplements INTERPOL international law enforcement efforts by supporting close working relationships with foreign country law enforcement officials and with DEA and FBI officials in various foreign locations. The USMS continuously improves its methods to apprehend fugitives by coordinating task forces, bringing together

the special talents of investigators for intense cases, improving on electronic surveillance techniques, applying special analytical methods, and upgrading the use of automated information systems.

ACTIVITY: SEIZED ASSETS MANAGEMENT

1987 Appropriation Enacted	Perm	FTZ	Amount
1988 Base	202	325	\$24,044
1988 Estimate	339	325	24,689
Increase/Decrease	337	325	24,683

BASE PROGRAM DESCRIPTION: The Asset Seizure and Forfeiture Program is one of the most potent weapons in the Department's law enforcement program, particularly when it targets large criminal organizations such as illegal drug enterprises. The success of the program relies on the close coordination between the Department of Justice's investigative agencies, the U.S. Attorney's Offices and the USMS. The USMS has two primary roles as it relates to the asset forfeiture program: an operational role and an administrative role. With regard to the operational role, the USMS is responsible for executing court orders which include the physical seizure and securing of assets. The administrative role consists of establishing contracts with private sector vendors and/or memorandums of understanding with other federal agencies to perform the work necessary to ensure assets are properly maintained while pending forfeiture action. Once forfeited, the USMS works to ensure the assets are disposed of in a timely and commercially sound manner.

ACTIVITY: D. C. SUPERIOR COURT

1987 Appropriation Enacted	Perm	FTZ	Amount
1988 Base	206	171	\$18,040
1988 Estimate	206	196	19,383
Increase/Decrease	206	196	19,383

BASE PROGRAM DESCRIPTION: The Office of the U.S. Marshal for the Superior Court in the District of Columbia performs functions which are local in nature and are typically performed by a sheriff or similar local official. The USMS supports the Superior Court with activities that are outside federal jurisdiction in other districts. These include such matters as serving civil and criminal bench warrants, executing orders for apprehending mentally ill persons, and conducting court-ordered evictions. At the same time, this office performs services done in all other USMS district offices, including protecting the judiciary, detaining and transporting prisoners, tracking fugitives, and service of process.

The D.C. Superior Court and Court of Appeals have 104 judicial officers consisting of 69 judges, 15 magistrates, and 20 senior judges occupying 84 courtrooms and hearing rooms located in three separate buildings. The court operates 6 days a week, including all holidays, and handles a wide variety of judicial cases including: criminal (felonies, accelerated felonies, traffic felonies, and misdemeanors involving injury); civil (major actions above \$2,000); family (domestic relations, contested divorces, and contested custody); commissioners (mental health hearings, small claims, misdemeanors not involving injury, D.C. traffic, preliminary hearings, arraignments, and family matters (Chief Judge criminal cases and tenant disputes)). Deputy U.S. Marshals are assigned to courtrooms that have criminal proceedings, with the exception of one civil courtroom where the proceedings are so volatile that the judges demand the presence of a deputy.

ACTIVITY: SERVICE OF LEGAL PROCESS

	Perm Pos.	FTE	Amount
1997 Appropriation Enacted	182	188	\$18,223
1998 Base	182	188	18,615
1998 Estimate	182	188	18,615
Increase/Decrease

BASE PROGRAM DESCRIPTION: Every year, the USMS executes thousands of summonses, writs, mandates, and other legal process for the federal courts, U.S. Attorneys, private litigants, federal agencies, foreign governments, and others. Service of Legal Process includes summons and complaints in civil actions, subpoenas in both civil and criminal, writs of habeas corpus, and enforcement of major injunctions. This program is responsible for providing law enforcement assistance for nuclear weapons movements through reimbursable agreements with the Joint Cruise Missile Project Office of the Department of Defense and the U.S. Air Force. Additionally, Service of Legal Process provides specific assistance to state and local law enforcement agencies.

The Anti-Drug Abuse Act of 1988 amended 28 U.S.C. 1921, and provided for the collection of fees and commissions for the personal service of non-government civil process by USMS. The amended statute (Sec. 7608 (c), PL. 100-690) permits the Attorney General to set fees and commissions. Regulations establishing new fees and commissions for the service of process became effective in February 1991. As a result, the USMS has collected over \$3 million each year for the past four years.

For non-warrant court orders, 70 percent are served in person, 20 percent served by mail and 10 percent are returned to the court unexecuted. What at first may appear to be routine work (e.g., summonses and complaints filed in debt collection cases) frequently requires significant investigation by the Deputy U.S. Marshals as they try to locate the individuals attempting to avoid service. The quantity and complexity of the USMS's workload are determined, in large part, by decisions made by the U.S. Attorneys, investigative agencies, and the courts.

ACTIVITY: TRAINING

	Pos.	PLT	Perm	Amount
1997 Appropriation Enacted	27	24		\$4,584
1998 Base	27	24		4,667
1998 Estimate	27	24		4,667
Increase/Decrease

BASE PROGRAM DESCRIPTION: The USMS Training Academy, located at the Federal Law Enforcement Training Center (FLETC), provides and oversees the training of all USMS personnel. A wide range of programs are offered that address the needs of both operational and administrative personnel; as well as two courses specifically designed to assist state and local law enforcement. Regional and management training that cannot be accommodated at the FLETC are conducted at various locations throughout the country to ensure that personnel are current on all aspects of their program area. The Academy responds to the ever-increasing demands for new courses to produce a highly competent and professional work force using current technology to perform assigned tasks efficiently, effectively, and safely.

The Academy's goal is to ensure that all personnel within the USMS receive, on a scheduled basis, the knowledge and skills necessary to support the mission of the agency, such as protection and support of the judiciary, apprehension of fugitives, seizure of assets, security of witnesses, transportation and housing of federal prisoners, and administrative functions.

ACTIVITY: ADP AND TELECOMMUNICATIONS

	Pos.	PLT	Perm	Amount
1997 Appropriation Enacted	27	21		\$20,738
1998 Base	27	21		16,928
1998 Estimate	28	22		19,062
Increase/Decrease	2	1		2,134

BASE PROGRAM DESCRIPTION: The ADP and Telecommunications decision unit is comprised of the Information Technology Services (ITS) program and the Communications Management program. The goal of the ITS program is to provide Automated Information System (AIS) support to all USMS users and to provide a complete range of major AIS applications through the best possible information technology systems.

The basis of AIS support is the Marshals Service Network (MSNET) which provides access to local and remote software applications as well as central sites and national databases. At the end of FY 1996, the USMS computer equipment inventory included 4,100 personal computers, 3,400 printers, 129 file servers, and 279 network routers. All districts (94 main offices and 166 suboffices) and headquarters divisions had at least one work station with the ability to connect to all other USMS offices through the wide area network.

ITS staff at headquarters supports major AIS projects through centralized planning, design, programming, and maintenance. ITS also provides contractor support to augment staff services. In addition, Senior Systems Administrators (SSAs), dedicated computer specialists, work in the largest district offices and provide front line support for those offices and the districts surrounding them. By the end of FY 1996, SSAs and ITS staff at headquarters had received 7,016 requests for AIS assistance.

The primary missions of the Communications Management program are radio communications, telephone communications, and communication security. The USMS two-way radio system includes fixed equipment, mobile units, and hand units, and portable equipment. These radios support all USMS operational missions: Prisoner and Witness transport, protection of the federal judiciary, witness security activities, and nuclear waste escort. The USMS is in the process of replacing all analog radios with digital narrow-band radios. These new units provide the privacy and security required by federal law enforcement standards.

The Service's Telephone Support area is responsible for the design, installation, maintenance, and upgrade of all telephone systems at headquarters and in the districts. Periodic travel to the districts insures that telecommunications requirements are met with regard to current and future office layouts, system size, and system type. In some instances, visits are necessary to oversee the entire telephone system installation process. The Service's Secure Communications area is responsible for the nationwide COMSEC program that has 808 Type 1 STU-III telephone units, 313 secure facsimile machines, and 457 Type 2 STU-III telephone units.

ACTIVITY: MANAGEMENT AND ADMINISTRATION

	Perm	FTK	Amount
1997 Appropriation Enacted	Pos.	74	\$18,692
1998 Base	152	74	19,025
1998 Estimate	136	76	19,438
Increase/Decrease	4	2	413

BASE PROGRAM DESCRIPTION: The Business Services Division (BSD) coordinates the Courthouse Construction Program in conjunction with GSA and AOUSC. BSD also oversees and coordinates all requests for space nationally to GSA and tracks rent at approximately 455 locations.

BSD manages the USMS fleet which includes 2,769 vehicles. The major activities are: specifying and ordering new purchased and leased vehicles; maintaining the vehicle inventory and management information system; maintaining vehicle accident records and reimbursing accident repairs; and ordering, renewing, and replacing government gasoline credit cards.

BSD administers the Service's personal property management program which is mandated by the Federal Property and Administrative Services Act of 1949 and numerous other federal regulations. Currently, the USMS

maintains an inventory of more than 30,000 items of accountable property having an aggregate value in excess of \$100 million.

BSD establishes financial management policies and procedures and performs oversight for the districts and headquarters divisions. The scope of financial management spans five major appropriations and includes monitoring day-to-day transactions and obligations, reviewing financial management reports, and monitoring collection and disbursement functions to ensure the integrity of financial data recorded by the field.

BSD is responsible for purchasing all supplies, equipment, and services for all headquarters offices. BSD reviews all contracts to ensure adherence to federal regulations and USMS policies. BSD's goal is to have an on-site review of each district at least once every five years to provide oversight of district simplified acquisition procedures.

The Management and Budget Division (MBD) is responsible for formulating and executing all USMS appropriations. MBD coordinates the submission of the court security appropriation with KODSC and coordinates the protected witness component of fees and expenses of witnesses with DOJ. MBD is responsible for planning, developing, and supporting the Service's management and productivity improvement initiatives. It directs the Service's strategic planning process, leads quality management initiatives, coordinates performance improvement, and implements major automated information systems.

MBD is responsible for promulgating all USMS policy. The division maintains and publishes the U.S. Marshals Manual and monitors compliance with the Federal Energy's Financial Integrity Act. MBD performs internal audits of districts and headquarters elements. The division documents and analyzes review findings and recommends corrective actions in order to eliminate vulnerabilities and prevent future problems.

The Human Resources Management Division provides a full range of personnel services for approximately 4,100 employees nationwide. Services are provided in field support, headquarters support, benefits and payroll, employee and labor relations, health and safety, career programs, background investigations, suitability adjudications and program oversight.

The Prisoner Services Division, Office of Interagency Medical Services is responsible for: developing and administering USMS prisoner medical program policies; providing technical assistance to the field; coordinating interagency prisoner medical care and infectious disease control; and containing medical cost initiatives.

The Executive Services Division (ESD) includes the Office of Congressional and Public Affairs, Investigations and Equal Employment Opportunity Division. ESD also performs integrity-related internal investigations of alleged misconduct, albeit activities are performed in accordance with USMS employees and contractors. The division also serves as the liaison with the DOJ Office of Inspector General, Office of Professional Responsibility, and FBI when assisting with investigations of USMS employees.

4	2	190
3	3	468
62	46	11,417

Proposed Actions

These initiatives seek to address the following objectives:

- 1) Provide personnel to protect all high-threat trials, other criminal proceedings, and certain civil proceedings, where warranted;
- 2) Provide a safe, secure, and unimpeded environment within which the federal courts can conduct business;
- 3) Maintain security at 18 new and renovated judicial facilities;
- 4) Streamline financial processes through secure banking and electronic reporting services;
- 5) Increase security of protected witnesses;
- 6) Reduce workload in district offices;
- 7) Reduce DWSM overtime, guard and special assignment costs; and
- 8) Provide skilled, trained personnel to perform specialized WITSEC functions.

Courthouse Security

The USMS requests 83 positions (43 DWSMs and 40 administrative positions), 41 PM and \$5,187,000 to provide personnel necessary to ensure that new and renovated federal courthouses can open on schedule with adequate security. A large portion of the USMS workload is generated by other law enforcement agencies, especially the Drug Enforcement Administration (DEA), Federal Bureau of Investigation (FBI), Alcohol, Tobacco and Firearms (ATF) and the U.S. Customs Service. As these agencies succeed in apprehending and prosecuting drug

traffickers and other violent offenders, the USMS must handle an increasing number of lengthy and costly multi-defendant trials. Processing high-threat criminals throughout the courts takes staffing dedicated specifically to these cases.

The Comprehensive Crime Control Act, the Organized Crime Drug Enforcement Task Force, the Sentencing Reform Act, the Anti-Drug Abuse Act, the Violent Crime Initiative, and the Crime Control Act all contribute to the increase in the USMS's security workload. Complex security problems have resulted from these criminal justice statutes. The USMS must produce growing numbers of allegedly dangerous drug traffickers and other violence-prone individuals in federal courts for numerous proceedings.

The requested resources will provide adequate staff at the 15 courthouse projects completing construction or renovation in FY 1998. Seventeen of the 53 positions are designated for new courthouses that were originally scheduled to open in FY 1997, but, due to construction delays, will open in FY 1998. Without additional personnel, these courthouses cannot open with adequate security. The number of personnel required at each facility is based on a variety of factors, including: 1) whether or not the facility is establishing a new court location; 2) whether additional judges or magistrates are being added at the facility; and 3) whether or not the facility's cellblock area requires more staffing to secure the existing facility.

The USMS used three technical advisors (two Chief Deputy U.S. Marshals who were Deputy Chiefs of the former Court Security Division and a Supervisory Court Security Inspector) with extensive experience in district offices and court security to assist in determining the USMS staffing requirements for each courthouse construction project to be completed in FY 1998. The advisors met with the USMS Business Services Division to review the description of each courthouse renovation/construction project scheduled to be completed in FY 1998. Based on the project description, they identified projects which may need additional personnel. Using standard questions, the technical advisors contacted the appropriate districts to determine the number of new DUSM and administrative positions required as a direct result of the courthouse project. Copies of the surveys have been retained for future reference.

Based on courthouse project information from the General Services Administration (GSA), Administrative Office of U.S. Courts (AOUSC) and the district surveys, the following methodology was developed to determine the number of new DUSM and administrative positions required to provide appropriate security and support to the court space and its tenants: 1) a newly established judgeship requires four additional DUSMs; 2) when an additional district judgeship opens as the result of another district judge assuming senior status, the USMS needs two additional DUSMs; 3) a newly appointed bankruptcy judge generates the need for 0.5 additional DUSM; and 4) a newly appointed magistrate judge generates the need for two additional DUSMs. Furthermore, additional DUSMs are required due to other indicators and structural features, such as: 1) new courtrooms; 2) an increase in distance between the principle jail facility and the courthouse; 3) a project resulting in an additional facility adjacent to an existing facility (two additional DUSMs required); and 4) a project resulting in a holding cell design that included a full-time monitoring post (one new DUSM).

Courthouse Project Equipment

In addition to the requested personnel, an increase of \$5,572,000 is requested to insure that new and renovated federal courthouses can open on schedule and properly function with adequate security. Funding is requested for communications, security equipment and furniture at 51 courthouses that either: 1) will open in FY 1998; 2) will have opened by FY 1998, but require continuing work in FY 1998; or 3) will open after FY 1998, but require funding in FY 1998 in order to meet construction schedule. The requested funding will permit the USMS to equip these 51 courthouses for operation and provide efficient and safe working environments for the USMS employees and participants in the judicial process.

Witness Security (WITSEC) Administrative Banking Positions

The USMS requests 6 positions, 2 FTE, and \$190,000 to support the implementation of the Witness Security Banking and electronic reporting services pilot project. The WITSEC Administrative Banking project increases the security of protected witnesses, reduces the administrative staff workload in the districts, and provides quicker cash management information to WITSEC headquarters. This initiative is intended to streamline the process of getting funds to the WITSEC inspector and provide an instant record of transactions for the headquarters office. By the fourth quarter of FY 1997, WITSEC will have implemented the banking pilot project in at least two regions, encompassing 13 district offices and supporting an average of 107 funded households.

Previously, administrative staff in 67 districts provided 100 percent funding support by processing and paying more than 30,000 witness vouchers every year. WITSEC regional offices have no prior direct involvement in this payment process. WITSEC will now provide 100 percent support. A WITSEC administrative position is required for each of the 12 regions due to an increase in the workload. To gain greater control of funded additional duties will be required of the WITSEC administrative staff. Witness vouchers will be processed and paid as districts have done in the past. The administrative staff will also be required to review budget and accounting transactions to determine funding requirements, accurately enter data into two automated accounting systems (WITSEC financial file and DOJ accounting system), conduct audits for compliance with policies and procedures and prepare end-of-month summary control sheets. Positions will be necessary in both the field and at headquarters to support the shift of responsibility from 67 districts to 12 WITSEC regional offices.

When this project was first envisioned, it was thought that eight additional positions were adequate manpower resources along with current WITSEC staff for the project. However, due to more complex automation requirements, computer support positions are necessary. Therefore, two of the eight positions authorized in FY 1997, originally intended for the field have been transferred to headquarters to provide financial management and computer support. The other six positions have been assigned to six of 12 regional offices. Of the remaining 6 Regional offices, two already have adequate administrative support and the four positions requested for FY 1998 will complete the requirement for an administrative position in each of the 12 Regional Offices.

In FY 1997, WITSEC anticipates spending \$33,000,000 on protected witnesses, which will likely generate more than 36,000 financial vouchers. By eliminating the receipt of checks from districts, the USMS will save \$973,440 (156 inspectors x 52 pickups x \$120 processing fees per check = \$973,440) annually. There are also unquantifiable savings derived from this electronic banking initiative. These are the workhours saved by the WITSEC inspectors who will be able to obtain funds from the WITSEC regional offices, thereby reducing the time spent travelling to and from the district office to pick up witness checks.

Witness Security (WITSEC) New York Metro Inspectors

The USMS requests 5 positions, 3 FTE and \$468,000 to support the New York Metro WITSEC safeite. Historically, to do all of the functions required of a major metropolitan and safeite facility, two DUSMs from the Southern District of New York (S/NY) have augmented the safeite staff. These DUSMs were then backfilled by hiring guards so the district's workload was not adversely impacted. The safeite also has used four DUSMs on recurring three-week details assigned through the Office of District Affairs.

Due to the sensitivity of the information contained in this safeite and the identity of persons supported, the assistance provided by both the S/NY DUSMs and the Special Assignment DUSMs is both limited and routine. Only trained WITSEC inspectors can handle complicated WITSEC specific functions. Therefore, five additional dedicated WITSEC positions will give increased continuity and flexibility in performing other WITSEC-specific functions requiring specialized skills and training (i.e., interviewing prospective witnesses, conducting preliminary interviews, preparing memoranda of understanding, and acting as liaison with investigative agencies, the courts and U.S. Attorneys).

The FY 1998 costs for hiring five new inspectors will be approximately \$643,000. This amount includes one-time costs associated with hiring a new DUSM such as training, travel, uniforms, equipment and other initial costs. This total cost is planned to be offset by the guard and overtime cost savings of \$175,000 for the requested level of \$468,000. By FY 1998, the anticipated costs associated with funding the positions out of the Special Assignment Reserve will be nearly \$1,000,000. The savings realized by using full time permanent positions rather than DUSMs on Special Assignment details provides an additional benefit for hiring fully trained WITSEC inspectors.

JUSTICE PRISONER AND ALIEN TRANSPORTATION SYSTEM

JPATS Program - Oversight and Analytical Capabilities

Perm	FTE	Amount
Pos.	...	500
...

Proposed Actions

This initiative seeks to address the following objective:

Comply with recommendations by the Deputy Attorney General and the Justice Management Division to create an analytical capability to develop performance data, plan operations and support resource requests for the efficient and effective operations of JPATS.

JPATS Program - Oversight and Analytical Capabilities

The USMS requests \$500,000 for contract services to provide analytical support to the JPATS program. In March 1996, at a briefing for the Deputy Attorney General (DAG) by the Justice Management Division (JMD), Management and Planning Staff, on the utilization of the USMS hangar, the DAG directed the USMS to create an analytic capability to develop performance data, plan operations, and support resource requests, for the efficient and effective operation of JPATS (such as mode of travel, frequency of routes, leased or owned airlift, location of hubs, etc.).

The availability of sound data and analysis related to the JPATS workload, per-unit costs, and optimal scheduling and routing decisions is not only critical to making decisions that are efficient and cost effective but also critical to the development and justification of resource requests. The Department has urged the USMS to develop aviation data sources and improve analytical functions since the late 1980s. The DAG and JMD have recommended that a highly technical staff be established to provide the analytical capability. Funding is requested to provide this capability through five contracted positions -- two operations research specialists, two computer systems analysts, and one economist. Utilizing contracted positions instead of hiring permanent employees will generate cost savings of \$116,000 in the first year for the USMS because personnel benefits and overhead costs are not paid. These positions would be located in Oklahoma City, Oklahoma, with duties and functions as follows:

Operations Research Specialist:

- 1) Identifies those areas of common management and administrative activities shared by FBI and DEA with JPATS that can be effectively coordinated to increase operational efficiencies, save resources, and eliminate redundancies;
- 2) Leads the preparation of a comprehensive DOJ transportation strategy, for approval by the DOJ leadership, which would include the integrated deployment of JPATS, ground transportation, and other resources b, USMS, BOP and INS;
- 3) Establishes solid quantitative performance measures, including budget, scheduling, training, maintenance data, etc., for JPATS operations that would be used for management and planning;
- 4) Reviews JPATS routing structures, trip frequencies, transportation conveyances utilized, etc.;

- 5) Recommends any required changes to the existing transportation systems for both the USMS and INS that will satisfy the requirements in the most efficient and economical manner (in the short-term and long-term);
- 6) Ensures that use of all available resources, i.e., airplanes and other vehicles, are optimized at all times.

Computer Systems Analyst:

- 1) Tracks, analyzes and evaluates the routes the aircraft fly with the view to automating the data to optimize flight schedules, ground transportation schedules, and detention space;
- 2) Analyzes the system for effectiveness and recommends changes and enhancements as necessary;
- 3) Prepares specifications for the procurement of software systems, develops and performs benchmarks to evaluate and test vendor software and hardware, and participates in vendor evaluation and selection committees;
- 4) Plans and conducts analysis of broad areas of project work processes to include system design, risk analysis and operations needs;
- 5) Studies the feasibility and proposed efficiency of further phases of the Automated Prisoner Scheduling System (APSS);
- 6) Provides technical advice to management and represents the organization in meetings with DOJ and other federal and non-government organizations.

Economist:

- 1) Prepares a sound acquisition plan and strategy for future JPATS aircraft purchases, including analyses of detainee population, facility activation, current unmet INS needs, maintenance requirements, etc.;
- 2) Conducts economic research and analysis in the capacity as technical consultant and economic advisor on the JPATS operation;
- 3) In conjunction with the analytical requirements, collects and evaluates the costs and resources involved with the movement of prisoners and the most effective use of the resources;
- 4) Collects, quantifies, analyzes and evaluates the cost of operating JPATS compared to the other transportation services available in the marketplace.

The USMS goal is to maximize the passengers on scheduled aircraft and vehicles and to transport them at the least cost. All aircraft, van and bus routing structures, trip frequencies, and other modes of transportation to be utilized are determined solely by the experience of the USMS Prisoner Transportation and Air Operations management and staff and the INS transportation system management staff. The size and type of aircraft to procure for the JPATS fleet is primarily determined by resources available that meet the prisoner transportation program needs.

The USMS is now in the process of building a prisoner transportation automation system, called the Automated Prisoner Scheduling System (APSS), which is scheduled to be completed, with data ready for analysis, by October 1, 1997. A successful system does not stop with the completion of the initial design and building of the system. As requirements modernize and workloads change, the computer analysts must constantly be aware of and proficient in modernizing and expanding the automation systems.

FUGITIVE APPREHENSION

DUSMs for Fugitive Apprehension	Perm FOL	FTE 20	Amount 5,145
Proposed Actions	40		

This initiative seeks to address the following objectives:

- 1) Stop the growing backlog and decrease the existing backlog of Class I warrants;
- 2) Provide additional investigative support to DUSMs working warrants in the field; and,
- 3) Work the additional new warrants generated from the new agents being hired by the FBI, DEA, and INS.

DUSMs for Fugitive Apprehension

An increase of 40 positions (40 DUSMs), 20 FTE, and \$5,145,000, dedicated exclusively for this function, is requested to reduce the growing backlog of Class I warrants. The USMS has investigative and apprehension responsibility for persons who commit the following federal offenses: bond default, probation violation, parole violation, and prison escape. The USMS also enforces warrants from agencies without arrest powers, bench warrants issued by federal judges, and warrants referred by the DEA.

The USMS receives approximately 19,000 Class I felony warrants each year. Of these warrants received, 65 percent are apprehended during the first year as a result of USMS investigations. Another 20 percent are apprehended by other law enforcement agencies. The last 15 percent of the new warrants is added to the USMS backlog. Over the past three years the backlog of warrants (warrants over 1 year old) has grown by 950 cases each year. As of September 30, 1996, the backlog numbers 17,574 warrants. The typical fugitive of these backlogged warrants is a white male between the ages of 31 and 45. He has been a fugitive for at least four years and was originally arrested on drug charges.

The table below shows the number of arrests and the number of fugitive apprehension workyears for FY 1994 through FY 1996. During these years, the USMS has averaged 24 arrests per workyear.

	FY 1994	FY 1995	FY 1996	Estimate FY 1997
Fugitive Apprehension Workyears ¹	474	578	621	621
Class I Arrests	13,059	13,682	13,748	15,000
Class I Arrests per WY	27	24	22	24
Backlog of Warrants at End of year ²	15,807	16,509	17,574	18,474
Backlog Increase	1,034	702	1065	900
Percent Increase in Backlog ³	7%	4%	6%	5%

In order to stop the growing backlog of Class I warrants, the USMS requests 40 additional deputy positions for fugitive apprehension. These 40 deputy positions will make enough arrests to keep the warrant backlog from growing each year and would be placed in the following districts that have the largest Class I warrant backlogs:

District	Requested Positions	Anticipated FY 1997 Backlog
Arizona	2	518
Central California	5	1,383
Southern California	8	1,977
Southern Florida	8	2,063
Eastern New York	4	1,200
Southern New York	5	1,339
Southern Texas	6	1,631
Western Texas	2	631
TOTAL	40	10,802

¹ FY 1995 - FY 1997 data include LEAP.

² Warrants over 1 year old.

³ Approximately 15 percent of new warrants is added to the USMS backlog each year. At the same time, deputies close approximately 10 percent of old cases for a net increase to the backlog of 5 percent.

ADP AND TELECOMMUNICATIONS

Perm	FTE	Amount
Pos.	1	2,134
2		

Radios

Proposed Actions

This initiative seeks to address the following objectives:

- 1) Begin a 7 year effort to replace current analog radio systems with new digital radio systems; and,
- 2) Establish an adequate base to maintain the current radio systems.

Radios

The USMS requests 2 positions, 1 FTE, and \$2,134,000 to begin a 7-year conversion effort to replace current analog radio systems with new narrow band digital radio systems. In January 1995, the National Telecommunications and Information Administration (NTIA) and Interdepartment Radio Advisory Committee (IRAC), under the Department of Commerce, mandated that all radio equipment must be converted from the current 25 Kiloherzt analog radio to the 12.5 Kiloherzt narrow band radio system by January 1, 2005. The USMS has strategically planned a systematic radio conversion effort to be completed by FY 2004. The plan can only be implemented with the adequate amount of funding and personnel. The USMS requires a total of \$40,000,000 (ideally, \$6,000,000/year for seven years) in order to achieve a complete conversion and not be in violation of the NTIA mandate. The USMS total requirement for the conversion is \$40,000,000.

Presently, the USMS has an inventory of approximately 6,200 pieces of radio equipment. Fixed radio equipment (repeaters and base stations) has an average life cycle of ten years. Handheld and mobile radios have an average life cycle of seven years. The following chart demonstrates that a substantial amount of equipment has outlived its useful lifespan and the USMS has a shortage of the new 12.5 Kiloherzt narrow band radio equipment.

Type of Radio	Radio Units	Percentage of Radios 10 Years or Older	Percentage Radios Converted To New Technology
Mobiles	2,617	44%	15%
Repeaters/Base Stations	2,655	40%	24%
Handhelds	2,926	0%	36%

The plan is to convert mobile and handheld radios first, since these new digital radios can be programmed, channel-by-channel, to operate in either the old analog or new digital environment. The fixed equipment (repeaters and base stations) will be installed in individual USMS districts with all fixed equipment being replaced within a district at one time, thereby making the shift to the new technology immediate. This way districts will not lose communications during the conversion period. This request includes \$2,000,000 for the replacement of radio equipment and \$134,000 for two GS-391-13 Telecommunications Specialists to assist in the management of the radio equipment inventory and the coordination of the conversion effort. Currently, the USMS has three positions managing the USMS's inventory of approximately 6,200 pieces of radio equipment. The USMS has found this level of staffing insufficient to efficiently handle the workload. If funding is not available and additional positions are not approved, communications will be jeopardized, endangering the lives of judges, USMS personnel, protected witnesses, U.S. Attorneys, prisoners and the public.

MANAGEMENT AND ADMINISTRATION

Electronic Freedom of Information Act (EFOIA)

Perm
Est. 4 FTE Amount
413

Proposed Actions

This initiative seeks to address the following objectives:

- 1) Reduce the backlog of FOIA requests;
- 2) Provide information in an electronic format; and,
- 3) Ensure timely responses to requests for public information.

The USMS requests 4 positions, 2 FTE, and \$413,000 to implement the requirements of the Electronic Freedom of Information Act (P.L. 104-231) and eliminate the current backlog of Freedom of Information and Privacy Acts (FOIPA) requests. The following outlines the USMS plan to meet the requirements of the new legislation.

**P.L. 104-231, Section 4.
Information Made Available in Electronic Format and Indexation of Records**

In 1995, the USMS was selected to serve as a demonstration site for the Freedom of Information and Privacy Acts (FOIPA) National Performance Review (NPR) Laboratory. As a result of this selection, the USMS received funding to purchase computer equipment to enhance current automated systems for processing FOIPA requests. The USMS requests \$47,000 to hire a GS-334-13 Computer Specialist. The computer specialist will maintain the FOIPA NPR site, provide demonstrations and training, input processed documents, and generate information on compact and floppy disks for FOIPA requests.

Additionally, the new law states that the USMS is required to create and maintain an electronic FOIPA reading room, which currently does not exist. The USMS estimates that 10,800 pages of information will need to be made electronically available in FY 1998. The USMS requests \$61,200 to hire a new GS-301-12 FOIPA Specialist to coordinate information, scan documents into electronic format, redact specific information electronically, index all the information available electronically, maintain and update the information contained in the electronic reading room, and process FOIPA requests.

**P.L. 104-231, Section 7.
Ensuring Timely Responses to Requests**

Prior to the new law, few lawsuits were filed because the government was commonly granted stays of litigation to process the requested documents administratively. Under the new law, the USMS recognizes that stays will no longer be granted except in extraordinary circumstances and projects the number of lawsuits to grow substantially. Presently, the USMS does not have an attorney specializing in FOIPA litigation and requests \$101,800 to hire one GS-905-15 FOIPA Attorney. This attorney will exclusively handle all FOIPA legal issues for the entire USMS.

The USMS requests \$47,700 to hire one GS-301-7 Office Automation Specialist and \$135,300 to hire 3 contractors. These positions will receive and track the FOIPA requests, maintain the electronic case tracking system, eliminate the backlog of FOIPA requests, create form letters, scan documents into an electronic format, and provide general administrative support to the FOIPA staff. The case tracking system is a critical tool that the FOIPA staff uses to compile very detailed information for an annual report to the Attorney General and it is essential that the information contained in the system is accurate.

NAME OF PROGRAM: Protection of the Judicial Process		PERFORMANCE TARGETS AND ACTUAL RESULTS

	16 Number of program witnesses harmed (while following program guidelines)	0	0	0	0	0	0	0	
A. Definitions of Terms or Explanations for Indicators									
4, 7 AOUSC will not provide projections. Projections for FY 98, 97, 96 are a percentage increase or decrease between the two previous fiscal years.									
1, 11, 12, and 13: Workload statistics for Prisoner Services are driven by the Judiciary and therefore, little or no discretion is available to the USMS in performance of these duties.									
B. Factors Affecting FY 98 Program Performance									
3 Results are internally driven by the sponsorship of witness into the Witness Security Program by investigating agencies (DEA, FBI) and by the authorization of these witnesses by the Criminal Division into the Program									
6 Increase is due to the increase in the number of prosecutors, trials, and criminal history filings									
11 Increase is as a direct result of departmental law enforcement and prosecutorial initiatives									

NAME OF PROGRAM: Justice Prisoner and Alien Transportation System (JPATS)		PERFORMANCE TARGETS AND ACTUAL RESULTS					
PERFORMANCE INDICATOR INFORMATION		1983 Actual	1984 Actual	1985 Actual	1986 Actual	1987 Target	1988 Target

	5. Number of State and Local prisoners moved to destination	1,278	3,583	4,898	6,398	8,824	8,824
	6. Number of military prisoners moved to destination	122	192	128	131	124	124
Intermediate Outcome	7. Number of flights by large and small jets that were from under full capacity	0	0	0	0	0	0
End Outcome	8. Number of complaints on timeliness received from customers	0	0	0	0	0	0
	9. Number of complaints from all categories of prisoners	0	0	0	0	0	0
	10. Number of staff injuries	0	0	0	0	0	0
	11. Number of staff deaths	0	0	0	0	0	0
A. Definitions of Terms or Explanations for Indicators:							
1 and 8. Moved by air only.							
2. Full capacity means that 85% or more of the seats are occupied or designated with a purpose includes some seats that may be vacant in order to separate males and females, or adults from juveniles, but would not include seats that are not occupied due to a shortage of prisoners. The figures above indicate that, to the date, flights are not scheduled until full capacity is reached.							
3. This indicator is not used for the purpose of the JPATS program. It is included here for information only. The actual information contained in the table above reflects the recollection and information from staff notes of all JPATS employees, including management.							
4. The prisoner (left type) was late for the intended hearing, trial, meeting, etc. due to transportation problems.							
5. Through 11, are new categories of information to be collected in the future. The actual information contained in the table above reflects the recollection and information from staff notes of all JPATS employees, including management.							
B. Factors Affecting FY 87 Program Performance:							
2. Increase as a result of the 484/USMS merger (workload represents full year for FY 86 and half year for FY 87)							
7. Through 11, it is difficult to predict the effects of carrying the additional responsibility for the phone and prisoner movements will have on the performance. These items may not hold true to the performance reports to date, but the USMS is assuming the load.							
C. Factors Affecting Selections of FY 87 and 88 Targets:							
2 and 3. Increase due to continued border initiatives and other initiatives							
Note: Actual figures for FY 1984 and FY 1985 have changed from the FY 1984 USMS Budget Estimates to OMB as a result of an internal management review.

A Factors Affecting FY 86 Program Performance	
2	The drop in real estate seizures is largely due to a December 1983 Supreme Court Decision (U.S. v. David Good) that allows a claimant to request a pre-seizure hearing before the taking of any occupied property. This decision has caused a significant drop in the number of seizures. In addition, the USMS no longer has jurisdiction over the post seizure management and disposition of IRS, ATF, and Secret Service judicial seizures. In addition to the David Good decision, where a lower court ruling on double jeopardy and incomplete time issues has slowed the volume of civil forfeiture. Once the Supreme Court rules on these lower court decisions (expected in late FY 86), seizures would should increase.

A. Definitions of Terms or Explanations for Indicators											
9 The District cannot meet the USAM standard of producing a prisoner with two Displaces for security and hearing at least one being armed with number of Displaces allocated											
B. Factors Affecting FY 98 Program Performance											
3 Prisoners down due to decreased arrest by D.C. Metropolitan Police Department because of budget cuts											
4 Increase resulted from more deputies assigned to capture fugitives											
5 Decrease resulted by more guards being hired to assist in handling prisoners in lieu of having enough personnel											
USAM Operational personnel resources in this district are stretched to limit and all operations are impacted as a result of the District's efforts to perform its missions and provide judicial security											
C. Factors Affecting Selection of FY 97 and 98 Targets											
No new positions were allocated for FY 98, so the status quo would likely be maintained. With increased resources in FY 97, a significant increase in results is anticipated

End Outcome	7. Percent of debt collected, contracted, or cleared (against amount received for collection)	24%	91%	20%	25%	25%	25%	25%	
A. Definitions of Terms or Explanations for Indicators:									
2. On July 30, 1984, DOJ ordered USMS to provide 24-hour protection at 24 abortion clinics in 14 districts. By November 23, 1984, the Attorney General authorized withdrawal of protective details and began scaling back details. This is a crisis generated initiative.									
5. The amount includes not only debt collected, but also debt that is gradually relieved over time through payment plans, pay withholding, etc. and it also includes those debts cleared by the U.S. Attorney after investigation by the USMS.

A. Definitions of Terms or Explanations for Indicators												
2 Reflects training costs for deputy recruits from position cost model												
3 Traditional training involves training conducted in a classroom setting												
4a Training Academy provides training instructions only												
5 Alternative training is provided to US&S employees of regional sites throughout the U.S. and training delivered by other means than in a classroom setting. For example, instructional videos and												

B. Factors Affecting FY 96 Program Performance	
5b.	The Academy continued its efforts to provide operational personnel, who have a minimum of three years of field experience, a two-week training course in firearms skills, personal protection, stress control, officer survival, and EEO. The introductory training program was implemented to ensure that all district operational employees received refresher training every three years.
6.	An alternative training program was provided to operational managers in selected training sites around the country to provide them with updates on topical issues and methodology to plan for out-year performance.
7.	In addition to classroom training, one major cost effective training tool that the Training Academy has used is producing and distributing video training tapes to the field and headquarters offices. In FY 1994, the Academy produced and disseminated a video to USAMC employees alerting them to the risks of bloodborne pathogens.
C. Factors Affecting Selection of FY 97 and FY 98 Targets	
8.	Statistics may not be employees who received two different types of training in the same year.

End Outcome	9. Number of districts meeting minimum narrowband radio standard (set by NTA and RMC)	0	0	0	0	0	0	0	0
A. Definitions of Terms or Explanations for Indicators:									
B. This figure only includes new and renewed court cases that require new phone systems installed. It excludes other District projects, such as upgrading or changing out systems.									
C. Federal Adjudicating Program Performance:									
D. Increase due to handling more DEA and United States Marshals Service cases.									
E. Increase due to handling more DEA and United States Marshals Service cases.									
F. FY 97 purchases reflect those radios which would be purchased with base increased funding, working toward the goal of replacing all current equipment with mandated narrowband systems.									
G. Increase related to the information and contracting set of help desk support services. USMS personnel will focus on network installation and support.									
H. This item was not funded.

United States Marshals Service
Justification of Adjustments to Base
(Dollars in thousands)

Transfers:	Pos.	NY	Amount
1. Construction Funding for Detention Space:	\$2,300
Base funding for construction related to U.S. Marshals Service detention space projects is being transferred from the Bureau of Prison's Building and Facilities appropriation to the U.S. Marshals Service's appropriation.			
2. Special Assignments:	(3,056)
Base funding for Special Assignments is being transferred to the Violent Crime Reduction Program (VCRP) appropriation for the U.S. Marshals Service. Details relating to judicial protection and investigative services will be charged to VCRP.			
3. Base Funding Transfer:	(126)	(126)	(8,558)
The base funding related to 126 positions is being transferred from the U.S. Marshals Service Salaries and Expenses appropriation to the VCRP appropriation.			
4. Equipment Transfer:	(2,589)
Costs related to equipment, guard costs, and other court security related costs are being transferred to the U.S. Marshals Service's VCRP appropriation.			
Total Transfers:	(126)	(126)	(\$11,903)
<u>Increase Automatic non-policy:</u>			
1. 1998 Pay Raise	\$5,969
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$5,969,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$4,507,000 for pay and \$1,462,000 for benefits = \$5,969,000).			

2. Annualization of 1997 Pay Raises 1,949

This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$1,949,000, represents the pay amounts for the first quarter of the year plus appropriate benefits (\$1,472,000 for pay and \$477,000 for benefits).

3. Annualization of 169 Additional Positions Approved in 1997 783

This provides for the annualization of 169 additional positions provided in 1997 Congressional Action for the Extension of the Judicial Program. This request includes nonrecurring costs for one-time items associated with the increased positions.

	Approved 1997 Increases	Annualization Required
Annual salary rate of 169 approved positions	\$7,076	\$5,548
Less lapse (50%)	(7,575)	(2,774)
Net Compensation	4,401	2,774
Associated employee benefits	2,890	910
Other (non-personnel)	792	863
Travel	1,499	646
Transportation of Things	452	(38)
GSA Rent	1,026	(207)
Communications/Utilities	420	280
Printing/Reproduction	41	28
Other Services	2,850	(1,338)
Supplies/Materials	278	167
Equipment	4192	(3,302)
Total costs subject to annualization	\$18,841	\$783

4. <u>Foreign Allowances</u>	1
Allowances for government employees in foreign areas are determined by the Department of State (DOS). The requested increase of \$1,000 provides a 1.7 percent increase over the obligations of \$58,824, which are committed for 1998.	
5. <u>Accident Compensation</u>	215
This increase reflects the billing provided by the Department of Labor for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$215,000.	
6. <u>Mileage Allowance Rate Increase</u>	6
The mileage allowance rate has increase from 30 cents to 31 cents per mile. An increase of \$6,000 is requested in 1998 to cover this rate adjustment.	
7. <u>Correspondence Management System</u>	16
An increase of \$16,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.	
8. <u>Investigation/Reinvestigation</u>	14
Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.	
9. <u>Spectrum Frequency Management</u>	107
Public Law 104-134 authorizes the Secretary of Commerce to charge federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable	

frequency management, this funding is necessary to continued operations. Funding of \$107,000 is requested for U.S. Marshals Service.

10. Northern Mariana Islands 1 155

Prior to 1999, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1999, reimbursement of these costs will not be available. Funding of \$155,000 is requested to maintain current efforts in CNMI.

11. General Pricing Level Adjustments 828

This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

Total Increases 66 10,043

Nonrecurring decrease associated with High Intensity Drug Trafficking Area

JHDTA transfer (240)

This reflects the decrease associated with the 1997 transfer of HDTA resources. Any transfers for 1998 have not yet been determined.

United States Marshals Service
Violent Crime Reduction Programs
Summary Statement
Fiscal Year 1998

For 1998, the United States Marshals Service requests a total of 167 positions, 167 workyears, and \$25,553,000 from the Violent Crime Reduction Trust Fund. This request represents an increase of 126 positions, 126 workyears, and \$553,000 to the 1997 appropriation enacted. This increase is a result of a transfer of programs previously funded from the U.S. Marshals Service Salaries and Expenses Appropriation.

This funding will provide the personnel necessary to ensure that new and renovated federal courthouses have adequate security. The Marshals Service's primary mission is to protect the federal judiciary and court proceedings, which is dependent upon the timely coordination and implementation of the established safety and security guidelines for the renovation and construction of detention prisoner movement and related high security areas.

**United States Marshals Service
Violent Crime and Reduction Programs
Justification of Proposed Changes in Appropriation Language**

The 1997 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Violent Crime and Reduction Programs, United States Marshals Service

For activities authorized by section 190001(b) of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended, [\$25,000,000] \$25,531,000 to remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund.

(P.L. 103-322 Section 190001(b), Department of Justice Appropriations Act, 1997)

Explanation of Changes:

No substantive changes are proposed.

859

1997 Congressional Actions:

Congress did not approve \$477,000 in funding for courthouse security equipment.

MISSION STATEMENT:

It is the mission of the United States Marshals Service (USMS) to protect the federal courts and ensure the effective operation of the judicial system. The USMS protects judges and other participants in the judicial process; provides for the security of the federal court facilities; executes court orders, including certain arrest warrants and the seizure, maintenance and disposal of assets; carries out the directives issued by the Attorney General; provides for secure confinement, transportation, and production of prisoners; assures long-term safety of government witnesses; collects fees, and makes payments in support of prisoners in non-federal facilities.

ACTIVITY: PROTECTION OF THE JUDICIAL PROCESS

1998 Estimate	167	167	25,553
Increase/Decrease

BASE PROGRAM DESCRIPTION:

The Violent Crime Reduction Trust Fund is the result of a cooperative approach taken by the Administration and the Congress to address the country's significant violent crime problem. The fund is a result of legislation that sets up a conservative approach for correcting the problem. All positions of government will participate in a concerted effort to reduce violent crime throughout the country. Federal law enforcement and judicial resources will provide significant assistance to the State and local efforts.

The Marshals Service has seen the results of these initiatives as additional prisoners face federal charges as a result of the provisions of the Comprehensive Crime Control Act of 1994 and as others are arrested as a result of task forces targeting violent criminal activities.

PROGRAM CHANGES:

No program increases are requested for FY 1998. However, a transfer of 126 positions, 126 FTE, and \$553,000 from the Salaries and Expenses Appropriation is requested to align VCRP requirements together. The positions and funding are base resources for courthouse personnel and special assignments to support high threat trials.

Justification of Adjustments to Base
(Dollars in thousands)

	Pos.	BY	Amount
<u>Transfers from U.S. Marshals Direct Appropriations:</u>			
1. <u>Special Assignments:</u>	\$3,056
Funding for Special Assignments is being transferred to the Violent Crime Reduction Program appropriation for protective details relating to judicial security and investigative services that will be charged to VCRP.			
2. <u>Base Funding for Courthouse Personnel:</u>	126	126	8,558
Transfer of base funding for courthouse personnel of 126 positions and workyears transferred from the U.S. Marshals Service Salaries and Expenses (SSE) appropriation.			
3. <u>Equipment Funding:</u>	---	---	2,589
Costs related to equipment, guard costs, and other court security related equipment are being transferred from the U.S. Marshals Service SSE.			
Total Transfers:	126	126	\$14,203

Increases (Automatic, non-policy):

1. <u>Annualization of 1997 Pay Raise</u>	55
This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$54,000, represents the pay amounts for the first quarter of the year plus appropriate benefits (\$4,525 for pay and \$10,475 for benefits).			
2. <u>Annualization of 1997 Positions</u>	76
This provides for the annualization of positions provided in the 1997 Congressional Action for the <u>Protection of the Judicial Process Program</u> .			

3. General Pricing Level Adjustments	422
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		
Total Increases	14,756
Decreases:		
Nonrecurring Costs for Courthouse Projects	(\$14,203)
This decrease is to remove one-time expenses for the purchase of security equipment and furniture for new and renovated federal courthouses.		
Total Decreases	(\$14,203)
Total Adjustments to Base	126	\$553

**Department of Justice
United States Marshals Service
Federal Prisoner Detention Program**

SUMMARY STATEMENT:

A total of \$462,831,000 is requested for the Federal Prisoner Detention Appropriation to pay for the support, housing and safekeeping of federal prisoners in United States Marshals Service's (USMS) custody. The request will provide the resources to fund 7,029,573 Intergovernmental Agreement (IGA) and contract jail days.

This funding request for the FPD program provides for the required IGA and contract jail space estimated to be needed through FY 1998. It is the result of multi-component planning within the Department of Justice. Since 1984, the USMS has experienced an unprecedented growth in both population and jail day levels. During this period, the USMS average population has increased by 346 percent from 5,383 in 1984 to over 24,000 in currently.

United States Marshals Service
Federal Prisoner Detention
Program Performance Information
Activity Resource Summary
 (Dollars in Thousands)

MISSION: The USMS is responsible for administering the Federal Prisoner Detention (FPD) Program for the federal government. This account is charged with housing the 17th largest correctional population in the United States. The FPD account is responsible for providing funding for housing, subsistence, medical care, and hospital and detention facility guard service for all federal prisoners in the custody of the USMS. Detention services and bed space are acquired at the least possible cost to the federal government, through the use of IGAs; the use of cooperative agreements with state and local governments; the use of federal detention facilities; or the use of private jail facilities.

ORGANIZATIONAL GOALS:

To care for federal prisoners in the custody of the United States Marshals Service at a level which meets nationally accepted standards for detention of holding facilities.

ACTIVITY: CARE OF U.S. PRISONERS

	Perm. Fos.	FTE	Amount
1997 Appropriation	\$405,262
1998 Base	\$425,551
1998 Estimate	\$462,831
Increase/Decrease	\$ 37,280

BASE PROGRAM DESCRIPTION:

The Federal Prisoner Detention (FPD) appropriation provides the financial support for the housing, subsistence, medical care, and hospital guard service for federal detainees remanded to the custody of the United States Marshals Service (USMS). The USMS is responsible for administering the FPD program for the federal government. With more than 24,000 detainees in USMS custody on a given day, the USMS is charged with housing the seventeenth largest correctional population in the United States and depends on approximately 1,000 state and local governments and the Federal Bureau of Prisons to house these prisoners. Detention bed space for federal detainees is acquired at the least expensive cost to the federal government,

through Intergovernmental Agreements (IGAs) and Cooperative Agreements with state and local governments, at federal detention facilities, or in private jail facilities.

The USMS is responsible for maintaining the custody of all federal detainees in the federal judicial system, from the point at which a prisoner is initially brought into federal custody, through the entire trial process, and ending when a prisoner is acquitted or arrives at a designated Bureau of Prisons (BOP) facility to serve sentence. Detention is one of the most challenging program areas to manage because of the constantly changing environment and factors that affect detention. One of the major problems that must be overcome is the shortage of detention space near many federal court cities. A potent tool in acquiring detention space is the Cooperative Agreement Program (CAP). The CAP provides capital investment funding to selected state and local governments for the renovation, construction and equipping of detention facilities. In return, the USMS receives long-term, guaranteed jail space for federal prisoners in or near federal court cities.

PROGRAM INCREASE:

Perm. Fom.	FTE	Amount
...	...	\$37,280

CARE OF U.S. PRISONERS

The U.S. Marshals Service's pretrial population is generated as a result of public policy, and of multi-component investigative and prosecutorial efforts within the Department of Justice. Since the USMS, like the Federal Bureau of Prisons (BOP), is at the receiving end of federal law enforcement initiatives, prisoners' housing and care costs are uncontrollable and mandatory. The USMS has no control over the number of detainees remanded to its custody and no available options other than housing these prisoners.

The USMS requests a program increase of \$37,280,000 to cover the increase in jail days and jail day rates. The erratic growth in the federal detainee population, and resultant number of contract and intergovernmental agreement (IGA) jail days needed to house these detainees poses a formidable challenge in predicting future resource needs. However, the overall trend is upward for the detainee population and the resultant number of IGA and contract jail days needed to house these detainees.

Fiscal Year	Growth in Average Prisoner Pop.	Growth in IGA and Contract Jail Days
1983	118	88
1984	78	71
1985	198	138
1986	148	148
1987	-18	68
1988	228	298
1989	338	268
1990	148	208
1991	218	148
1992	208	318
1993	18	68
1994	-28	-68
1995	78	98
1996	138	168

Based on this data and other related factors, the USMS has developed the following jail day projections for FY 1997 and 1998:

	1997	1998
IGA and Contract Jail Days	6,295,052	7,029,573
Federal Jail Days ¹	2,823,144	2,823,144
Total Jail Days	9,124,196	9,856,717

These projections are derived by taking the actual FY 1996 jail day total of 5,380,720 and projecting the historical growth rate of approximately 13 percent to receive the jail days estimate for FY 1997. Then using a growth estimate of 11.7 percent for FY 1998, new estimates can be calculated. The USMS believes these are conservative projections, especially when considering the growth rate over the past year, and the continuing focus of prosecuting immigration illegal reentry cases.

The immigration initiative called "Operation Gatekeeper" is a prime example of increased prosecutorial initiatives. As a result of this effort, the USMS exhibited explosive population increases along the southwest border in FY 1996 and the trend is expected to continue through FY 1997. The following population growth occurred in the southwest border districts between October 1995 and October 1996: District of Arizona

¹ Federal Days are held constant, because BOP has indicated that no new federal facilities are due to open in 1998.

increased 24 percent; the Southern District of California increased 18 percent; the District of New Mexico increased 40 percent; and the Western District of Texas increased 33 percent.

The upward population trend is not associated entirely with immigration violations along the southwest border. Average daily population figures reported for FY 1996 (23,374) represent an increase of 13.2 percent over the FY 1995 average of 20,632. During this time, 41 districts (43 percent) were reporting population increases in excess of 10 percent. Additionally, if the data from the five southwest border districts is excluded, the net increase is 9.4 percent, indicating that although the southwest border immigration cases are not the only factor in the current growth.

Increased resources requested in FY 1997 by other agencies, particularly for border patrol, criminal investigator, and U.S. Attorney positions, will target violent crime, drugs, immigration and terrorism. These offenses will require partial detention and could push the detainee population well above these projections. To effectively support such initiatives, the USMS must be provided with sufficient resources to meet these anticipated increases.

In addition to the increase in jail days, the jail day rate to house the federal detainees is projected to continue to increase by five percent per annum. In FY 1996, the average jail day rate the USMS paid was \$55.26. The average rate expected to be paid in FY 1997 is \$58.02, and \$60.92 in FY 1998.

COOPERATIVE AGREEMENT PROGRAM

The Cooperative Agreement Program (CAP) provides capital investment funding to selected state and local governments for the renovation, construction and purchase of equipment for detention facilities in return for long-term, guaranteed jail space. Each CAP project is unique in nature and provides partial funding to the state or local governments. This funding enables them to add new jail capacity, renovate existing jail space, or upgrade existing facilities to establish acceptable conditions of confinement in accordance with federal, state and local detention standards.

State and local governments have been tremendously interested in CAP agreements. Not only do these agreements help the USMS, but they provide an economic stimulus to the local economies, both through the initial capital investment, and also through the per diem payments when the bed spaces become available. The acquisition of jail bed space through the CAP program also avoids the most expensive bed space acquisition option, the construction of a Federal jail facility. Although resources for CAP are now included in the Office of Justice Programs appropriation (requested amount \$35,000,000), the USMS retains all CAP program manager responsibilities.

Federal Prisoner Detention
Justification of Adjustments to Base
(Dollars in Thousands)

Increases Automatic, Non-Policy:

	Est.	NY	Amount
1. <u>Medical Hospital Service Costs</u>	\$1,518
This request provides for the expected increase in cost of hospital medical services due to the projected increase in the medical rate and of the increase in jail days. The requested amount is \$1,518,000.			
2. <u>Jail Day Rate Increase</u>	\$18,563
This request recasts the number of state and local jail days projected to be available at the 1997 funding level by applying an increase for the annual inflation wide averaged rate. The requested increase reflects the additional resources required to fund the same number of jail days in 1998 as could be funded in 1997. Jail day costs are projected to rise by an average of five percent from \$38.02 to \$60.92.			
3. <u>Security Guard Services</u>	\$206
This request applies the OMB pricing guidance to guard service costs and other miscellaneous expense categories. The increased costs identified result from applying a factor of 2.7 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing, transportation costs and utilities.

Summary Statement
Fees and Expenses of Witnesses

For the Fees and Expenses of Witnesses (FEW) appropriation, the Department requests a total funding level of \$75,000.00 for 1998 to remain available until expended. This resource level represents a reduction of \$25,702.000 below the 1997 enacted level. This reduction is proposed as a means of reducing the significant unobligated balances that have been carrying forward in this appropriation since 1993.

The Fees and Expenses of Witnesses activity provides for all fees and expenses associated with the provision of testimony on behalf of the Government. Specifically, there are two types of witnesses that are compensated under the provisions of this activity. Fact witnesses testify as to events or facts about which they have personal knowledge. These witnesses are paid a statutorily established rate of \$40 per day plus reasonable amounts for travel and certain other costs associated with their appearance. Expert witnesses provide technical or scientific testimony and are compensated based on negotiations with the respective Government attorney. Such negotiations are conducted within the scope of prescribed fee ranges as provided in DOJ Order 2110.43. Funding allocated to this activity is also used to pay the fees of physicians and psychiatrists who examine accused persons upon order of the court to determine their mental competency.

The Protection of Witnesses activity provides for the security of Government witnesses, or potential Government witnesses, and their families when their testimony, concerning organized criminal activity, may jeopardize their personal security. This program provides funding for expenses of witnesses enrolled in the Witness Security Program. Such expenses include, but are not limited to, subsistence, housing, medical and dental care, travel, documentation, identity changes, one-time relocation, costs associated with obtaining employment, and other miscellaneous expenses.

The Victim Compensation Fund was established by Section 1208 of the Comprehensive Crime Control Act (Title II of P.L. 95-473). The fund is used by the Attorney General to "pay restitution to, or in the case of death, compensation for the death of any victim of a crime that causes or threatens death or serious bodily injury and that is committed by any person during a period in which that person is provided protection under this chapter." In the case of death, an amount not to exceed \$50,000 may be paid to the victim's estate. Moreover, the act authorizes payment of an amount not to exceed \$25,000 to the estate of any individual whose death was caused by a protected witness before the enactment of this law.

The Private Counsel activity was established under 28 C.F.R. 50.15 and 50.16, whereby, the Civil Division is authorized to retain private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties.

The D.C. Superior Court Informant Program (SCIP) was established upon passage of the 1991 Dire Emergency Supplemental Appropriations Act. Unlike the Witness Security program, which provides permanent relocations and identity changes, the SCIP provides temporary relocation and protective services to witnesses who provide prosecution testimony in D.C. Superior Court cases.

Fees and Expenses of Witnesses
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored.

Fees and Expenses of Witnesses

For expenses, mileage, compensation, and per diems of witnesses, for expenses of contracts for the procurement and supervision of expert witnesses, for private counsel expenses, and for per diems in lieu of subsistence, as authorized by law, including advances, (\$100,702,000), to remain available until expended, of which not to exceed \$4,750,000 may be made available for planning, construction, renovations, maintenance, remodeling and repair of buildings, and the purchase of equipment incident thereto, for protected witness safesites; of which not to exceed \$1,000,000 may be made available for the purchase and maintenance of armored vehicles for transportation of protected witnesses; and of which not to exceed \$4,000,000 may be made available for the purchase, installation and maintenance of a secure, automated information network to store and retrieve the identities and locations of protected witnesses.

1998 Estimate	45,515

Mission: To continue to provide adequate funding for payment of fees and related expenses incurred by individuals who provide factual, technical or scientific testimony on behalf of the United States or court designated indigent individuals, as provided by law. Funds provided for this activity also guarantee the right of accused persons to a fair and impartial trial by ensuring that the accused is mentally competent to stand trial and that the court has testimony regarding the mental competency of the accused at the time of the alleged offense.

Organizational Goals:

To provide reasonable compensation for expert witnesses, who testify on behalf of the United States, at rates established by the Attorney General or the Assistant Attorney General for Administration, pursuant to 28 U.S.C. 524.

To provide adequate resources to compensate fact witnesses who testify on behalf of the Federal Government for the expenses associated with the attendance at legal proceedings. The court-attendance fee paid to fact witnesses is set by law (28 U.S.C. 1821). As a result of Public Law 96-346 (September 10, 1980), the amounts authorized for travel, per diem and mileage are set by regulations governing official travel by Federal employees and promulgated by the Administrator of the General Services Administration.

To provide adequate resources to compensate fact witnesses used by those defendants designated as indigent by the courts. Expenses are paid to those witnesses who appear in criminal proceedings in Federal court for the indigent defendants.

To provide payment for the fees and expenses of psychiatrists who perform court-ordered evaluations to determine the mental competency of defendants, pursuant to 18 U.S.C. 4241 and 4242.

Base Program Description: This program provides for payment of fees and expenses of expert witnesses who appear on behalf of the Government when scientific or technical expertise is required in the prosecution or defense of a case. The pursuit of complex litigation by the Department would not be possible without qualified experts to testify and to refute the non-legal particulars of individual cases. The testimony of expert witnesses is essential to the successful outcome of such litigation. While a wide array of specialized disciplines are involved in the Department's litigation, experts from certain disciplines are used extensively. For example, approximately sixty percent of expert witnesses used by the Department in 1989 were either physicians, psychiatrists, appraisers, engineers, or economists. Also, the testimony of fact witnesses is used in court proceedings by the Department's legal divisions and the U.S. Attorneys. Fact witnesses are needed in a wide range of court proceedings, as well as pre-trial conferences. Fees and expenses paid to fact witnesses are intended to defray the costs of appearing to testify and are set by law and/or regulation. Further, the importance of this program is underlined by the need to protect the rights of accused individuals. Courts often order the Government to pay the costs associated with mental competency examinations conducted by physicians or psychiatrists. These examinations are performed in an attempt to determine whether an accused person is mentally competent to stand trial and/or was mentally competent at the time of the offense.

Legal Activities
Justification of Program and Performance
Activity Resources Summary
(In thousands of dollars)

Activity: Protection of Witnesses

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	\$32,485
1998 Base	32,485
1998 Estimate	27,485

Mission: To increase the effectiveness of the Department's efforts to combat criminal activity in such areas as organized crime, drugs or narcotics, and murder or conspiracy to commit murder, by ensuring the safety of endangered or threatened witnesses.

Organizational Goals:

To protect witnesses and their families when the testimony of the witnesses may jeopardize their personal security

To compensate witnesses for subsistence costs such as housing, food, relocation, and incidental expenses as provided by the Witnesses Security Reform Act of 1984.

To provide orientation, documentation and family-oriented services to new WITSEC program entrants.

Base Program Description: The procedure for designating a person as a protected witness is set forth in Department of Justice OBD Order 2110.2 "Witness Protection and Maintenance Policy and Procedures." This order places within the U.S. Marshals Service the responsibility for the security of these witnesses and their families. This program provides for their financial maintenance including the following: subsistence expenses; housing; medical and dental expenses; travel; documentation expenses for identity changes; one-time relocation; costs for obtaining employment; and other miscellaneous expenses. This activity also provides for construction and maintenance of strategically located safe-site facilities to house protected witnesses before and during trial.

Activity: Victim Compensation Fund

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	\$0
1998 Base	0
1998 Estimate	(1,000) ⁴

Mission: To pay restitution, or in the case of death, compensation for the death, to any victim of a crime committed by a protected witness that results in death or serious bodily injury.

Organizational Goal: To provide compensation to those individuals, or, in the case of death, to the individual's estate, who are victimized by a protected witness.

Base Program Description: This program provides resources to compensate individuals who are victimized by protected witnesses. Section 1208 of the Comprehensive Crime Control Act of 1984 (Title II of P.L. 98-473), enacted October 17, 1984, authorized annual appropriations not to exceed \$1,000,000 for the Victim Compensation Fund. The Fund was initially funded by the 1985 Supplemental Appropriations Act (P.L. 99-88).

Restitution will not exceed \$50,000 for those victimized since the establishment of the Fund. Restitution not to exceed \$25,000 shall be paid to the estate of victims killed as a result of crimes committed by persons who have been enrolled in the Witness Security Program if such crimes were committed prior to enactment of P.L. 98-473.

⁴ The negative amount shown in the 1998 Estimate column for the Victim Compensation Fund will be offset against anticipated unobligated balances carrying forward from 1997. The current unobligated balance for this activity is \$1,704,000.

1998 Base	2,600
1998 Estimate	1,600

Mission: To continue to defend Federal employees personally sued for carrying out official duties.

Organizational Goal: To retain private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties.

BASE PROGRAM DESCRIPTION: This activity provides funding to allow the Department to retain outside private counsel to represent Government officers and employees who are sued for actions taken while performing their official duties. As provided for under 28 C.F.R. 50.15 and 50.16, the Civil Division is delegated the authority to retain such counsel and further provided that payments for such services will be payable from the Department of Justice appropriations.

Activity Superior Court Informants

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	\$1,400
1998 Base	1,400
1998 Estimate	1,400

Mission: To increase the effectiveness of Federal prosecutions in the District of Columbia by providing funding to temporarily relocate D.C. Superior witnesses who face potential danger as a result of their participation in Superior Court prosecutions.

Organizational Goals:

To provide funding to temporarily protect Superior Court witnesses and their families when the testimony of the witnesses may jeopardize their personal security.

To compensate Superior Court witnesses for subsistence costs such as food, temporary relocation, and other expenses incidental to their protection.

Base Program Description: This program provides for funding for the protective services offered to D.C. Superior Court witnesses. Specifically, funding is provided for subsistence expenses; travel; temporary relocation, and other miscellaneous expenses. Funding in 1996 was provided from available balances.

Legal Activities
Fees and Expenses of Witnesses
Justification of Multi-Activity Program Changes
(in thousands of dollars)

Estimates by Budget activity	1998 Base	1998 Estimate	1998 Program Change
Fees and Expenses of Witnesses	\$64,217	\$45,515	(\$18,702)
Protection of Witnesses	32,485	27,485	(5,000)
Victim Compensation Fund	0	(1,000)	(1,000)
Private Counsel	2,600	1,600	(1,000)
Superior Court Informants	1,100	1,400	0
Total	100,702	75,000	(25,702)

A decrease of \$25,702,000 is requested to reduce unobligated balances. Since 1993, the unobligated balances for the Fees and Expenses of Witnesses (FEW) appropriation have averaged approximately \$34,750,000. Based on the level of funding demand for this appropriation, an average of about \$82,980,000 from 1993 through 1996, it is reasonable to believe that these large unobligated balances will continue to carry forward unchecked without the adjustment sought in this request. The requested reduction, about 26 percent of the 1997 enacted funding level, will not adversely affect the operations of the FEW in 1998.

Unobligated balances brought into 1997 are as follows:

Fees and Expenses of Witnesses	\$23,567
Protection of Witnesses	7,170
Victim Compensation Fund	1,704
Private Counsel	1,839
Superior Court Informants	675
Total	35,155

COMMUNITY RELATIONS SERVICE

Approved: *[Signature]* Date July 17, 1995
 JAMES RENO
 Attorney General

Department of Justice
Salaries and Expenses, Community Relations Service
Summary Statement
Fiscal Year 1998

For FY 1998, the Community Relations Service (CRS) is requesting a total of 71 permanent positions, 56 workyears and \$7,500,000 for the prevention and resolution of racial conflict. This request represents an increase of 30 positions, 15 workyears and \$2,181,000 above the FY 1997 enacted appropriation.

CONFLICT PREVENTION AND RESOLUTION

In accordance with Title X of the Civil Rights Act of 1964 (42 USC 2000g), CRS provides assistance to communities and persons in the prevention and resolution of disputes, disagreements, and difficulties relating to perceived discriminatory practices based on race, color, or national origin. At the requested funding level, 71 positions, 56 workyears, and \$7,500,000 will be available for this activity.

CRS' continued efforts to provide a catalyst for local solutions to local problems is in keeping with the original legislative intent of Congress, which was to provide an effective alternative mechanism to federal enforcement action in local civil rights disputes. As a component of the Justice Department, CRS is uniquely situated to be effective at meeting this objective. CRS is able to gain immediate access to State and local governmental authorities who may be involved in conflicts in local communities. However, as a non-investigative and non-enforcement agency, CRS can play an impartial facilitator's role between these officials and community leaders in conflict over racial issues.

CRS conciliators are prohibited by law from being involved in investigations or other enforcement activities and are, therefore, free to create, through application of accepted mediation and conciliation techniques, an atmosphere of candor and trust among the local parties in dispute. CRS effectiveness on the local level is further enhanced by the strictly voluntary nature of its services; none of the parties is required to take part in CRS conciliation or mediation. The decision to participate is made only at the local level.

In FY 1996, CRS closed 827 cases involving significant community-wide conflicts of a racial and ethnic nature, fostering the peaceful reduction of racial and ethnic tension in all 50 states and the U.S. Virgin Islands. This was accomplished, despite deep budget cuts requiring staff reductions of nearly 50% and significant curtailment of travel to the local sites of community crisis and conflict by the remaining 34 mediators. Budget limitations forced CRS to decline more than 250 requests for conflict resolution assistance from Mayors, police chiefs, school superintendents, and community leaders. In other cases, CRS service was deferred, confined to telephonic assistance only, or restricted to short-term crisis response.

Justification of Proposed Changes in Appropriation Language

New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Community Relations Service

For necessary expenses of the Community Relations Service, established by title X of the Civil Rights Act of 1964, ISS.319.0001 plus all other provisions: \$7,500,000
Provided, That notwithstanding any other provision of law, upon a determination by the Attorney General that emergent circumstances require additional funding for conflict prevention and resolution activities of the Community Relations Service, the Attorney General may transfer such amounts to the Community Relations Service, from available appropriations for the current fiscal year for the Department of Justice, as may be necessary to respond to such circumstances: Provided further, That any transfer pursuant to this paragraph shall be treated as a reprogramming under section 605 of this Act and shall not be available for obligation or expenditure except in compliance with the procedures set forth in that section. (Reorganization Plan No. 1 of 1966; Department of Justice Appropriations Act, 1997.)

No substantive changes in language proposed.

Mission:

To assist communities to prevent and resolve racial and ethnic tensions and conflicts, to develop the capacity of these communities to address such conflicts without outside assistance.

General Goals:

1. To address racial and ethnic tension and conflict through the provision of conciliation, mediation, technical assistance and training.
2. To help local communities and state agencies establish and improve their own mechanisms for anticipating, preventing, and resolving racial tension or disputes.
3. To support Department of Justice initiatives in areas impacting CRS operations, such as implementation of community policing, prevention of violence in communities, responses to immigration crises, and addressing hate crimes, and helping to create healthy relationship between law enforcement officials and minority communities affected by church burnings.

BASF PROGRAM DESCRIPTION: Conflict Prevention and Resolution - Program Operations has base resources of 41 positions, 41 workyears, and \$5,492,000. All positions are occupied by staff directly engaged in conflict prevention and resolution work. Staff who are part of this decision unit assist communities to prevent and resolve disputes based on race, color, or national origin through conciliation, mediation, training and technical assistance.

- Through conflict resolution, CMS helps parties, many of whom are law enforcement agencies, to identify the major issues in conflict, to identify points of agreement within those issues, and to define the actions necessary for resolution of the conflict.
- Through its prevention and local capacity building efforts, CMS seeks to reduce the prospects for violence and community discord through dialogues, problem-solving workshops, and structured training interventions. In this context, training and technical assistance are provided that encompass areas such as implementing community

policing, avoiding excessive use of force, improving police/community relations, reducing violence in schools, dealing with hate incidents and hate groups, and understanding cultural diversity.

- CRS also undertakes and coordinates interagency projects each year in cooperation with public and private sector organizations, e.g., U.S. Attorneys, National Task Force on Church Burnings, the Federal Bureau of Investigation (FBI), and the National Organization of Black Law Enforcement Executives.

Program Operations Staff Support to Regional Conflict Resolution and Prevention Services:

Program operations staff provide regional support in the following areas: strategic and operational planning; coordination, policy development and guidance for program operations; security program management; management of information and technological systems; staff development and training; program evaluation; conference/planning and logistics; National Performance Review program implementation; legal interpretation, advice, and services; FOIA/Public Affairs program; records management and disposition; employment-management relations and EEO issues; and media/public relations.

ACCOMPLISHMENTS

Conflict Resolution

During FY 1995, CRS conciliation staff filed 1,836 new alerts, indicating an occurrence that could possibly require CRS case work; worked on 1,557 assessments to determine whether such matters were appropriate for a CRS response; and worked on 1,005 cases, in which CRS provided conciliation, mediation, technical assistance, or training services. CRS worked on 317 cases involving local law enforcement, 78 of those related to police use of force.

During late FY 1995 and throughout FY 1996, CRS staff was called upon in an unprecedented way to help communities across the nation prevent and resolve racial and ethnic conflicts. On June 24, 1996, CRS strength reached its lowest historic staffing level of 41 employees, a total of 7 headquarters staff and 34 field staff. Remarkably, this came at a time when the demand for CRS services was greater than it has been since the Los Angeles riots or

perhaps before. In a climate of heightened racial tensions and intolerance, brought on by the rash of church burnings occurring without apparent latus, episodes of law enforcement use of excessive force, open immigrant bashing, and increased confrontations involving Klan and other hate groups, CWS' limited resources were already stretched well beyond our capacity to respond. More than thirty years of CWS experience have demonstrated that conflicts are resolved only by working directly with local officials and community leaders, and that there is no substitute for the services delivered by experienced and impartial CWS conciliators. Despite severe staff limitations, CWS is responding at both the national and local levels to as many of these conditions and situations as possible. The following provides an overview of the challenges CWS faces in successfully delivering important conflict resolution and prevention services.

Church Burnings

During FY 1996, CWS has undertaken significant activity at both the national and local community levels. CWS is a principal member of the National Church Burning Task Force. The CWS national coordinator is managing the overall CWS response and chairs the Task Force's community outreach working group. During FY 1996 and into FY 1997, CWS will be the focal point for identifying the locations of emerging or overt conflict and coordinating the provision of federal resources. CWS is developing materials on early indicators of racial tension for local and federal authorities, and is providing technical assistance to local task forces organized by U.S. Attorney's offices nationwide.

During FY 1996, CWS deployed teams of conciliators on-site to respond immediately to racial tensions during any immediate crisis situations. CWS's best work is done as part of a prevention and outreach effort to vulnerable communities. Drawing on established relationships, CWS works to build trust in both the minority and law enforcement communities before the environment deteriorates into a crisis situation. In order to do this, we must field teams to advise elected officials, law enforcement, business and clergy, and local minority leaders; assess tension levels and identify issues; and establish common agendas for healthy discussion.

During FY 1996, CRS fielded an experienced, mobile mediation force in Atlanta to respond to organized and spontaneous protest activities and conflict situations at Olympic venues. CRS staff members, one fourth of CRS permanent personnel, were in Atlanta over the three-week period from July 19 - August 4, 1996. CRS was on-site to respond to racial tensions during the Olympic Opening and Olympic Games in Atlanta, Georgia. Throughout the time period immediately preceding the Olympics and during the Olympics, CRS implemented its operational plan of continuous networking with Federal, state, and local law enforcement agencies, the Atlanta Committee for the Olympic Games and other officials.

Democratic and Republican Conventions

that both the Democratic and Republican National Conventions. CRS mediation forces were helpful in a number of situations which otherwise might have deteriorated or led to more confrontations. CRS applied specific conciliation skills and knowledge to its work in the following areas: 1) CRS participated in a series of pre-planning and preparation meetings with all levels of law enforcement and identified protest groups to assure adequacy of communications and contingency planning; 2) CRS developed liaisons with all city, state, and federal officials in advance of the events; provided technical assistance, and shared insights and experience with lead officials; 3) CRS was familiar with the needs and attitudes of various national groups whose activities involved race or ethnic issues, especially the American Indian Movement, Refuse and Resist, and others who were involved in protest activities; 4) CRS was skilled in developing quick credibility with minority communities, on several occasions communicating with local residents to assure that a potentially explosive situation did not become exacerbated.

OTHER ONGOING CONFLICT RESOLUTION ACTIVITIES

Regional Conciliation Casework Activities

During FY 1996, each Regional and Field office continued to conduct its regular caseload of conciliation and mediation activities, as well as carry forward the casework of the conciliators who left CRS on June 22, 1996 as part of our 40 percent downsizing requirement. Regional offices, staffed by a Regional Director and two senior mediators, were responsible for alerting, assessing, and resolving community racial conflicts throughout their jurisdictions. While CRS cannot be certain that there will be civil unrest in any particular community, CRS Regional Tension Appraisals indicate that many communities are vulnerable and at risk for racial conflict apart from specific instances of church violence. Historically, the summer is a higher risk time period for racial conflicts. The prospect of increased summer tension is exaggerated by such issues as teenage summer unemployment, decreased recreational programs, community curfews, and aggressive crime enforcement.

CRS Participation in Distant Shore and Southwest Border Enforcement Plan

CRS' participation and resources are included in the Department of Justice's mass immigration response planning. During FY 1995/96, CRS conciliation staff participated in Operation Safehaven at the U.S. Naval Base in Guantanamo Bay, Cuba and Howard Airforce Base in Panama. In the event that Distant Shore or the Southwest Border Enforcement Plan are implemented, CRS would be called upon to provide mediation and conflict resolution services to both detained populations and state and local communities.

CRS Response to Tensions Over Stopped Up Enforcement Efforts by the Immigration and Naturalization Service

As the Immigration and Naturalization Service (INS) expands its enforcement activities at work sites and other locations, INS management anticipates a corresponding increase in community tensions. CRS has been advised by INS of anticipated need for CRS' services to address these issues. CRS also expects to provide support to the INS in their community outreach efforts.

Special Department of Justice Initiatives

CJS has been a helpful resource and advisor on community relations and racial/ethnic issues associated with the Department's initiatives. CJS participates in the Department's Environmental Justice Initiative and is conducting successful mediation activities at Superfund sites. We anticipate the need for additional mediation activities associated with environmental site remediation in minority neighborhoods. CJS joined with the OUSD and the Office of Education in the production of the recently released school conflict resolution curriculum guide. CJS also is continuing its partnership with OUSD and COPS in the youth-focused Community Policing Consultations.

FY 1997 AND FY 1998 PROJECTS

In FY 1997 and 1998, CJS plans to continue its work in the areas described above and focus its services in the following areas:

Reinvigorating Support for Community Policing

CJS will respond to requests from law enforcement entities and communities across this country for assistance in training police officers and community leaders to adopt and implement a collaborative community policing philosophy. These activities support the Administration's crime prevention philosophy, as initially espoused in the Violent Crime Law. They are also consistent with the Attorney General's directive that Department components come together and form a true partnership with local law enforcement.

Addressing Violence in the Nation's Schools

CJS also will maintain its program for the prevention and reduction of racial violence and conflict in our Nation's schools. Teaching children other ways to resolve disputes is a critical element in breaking the cycle of violence. With the growing concern about youth violence, the demand among state and local education officials for the CJS Conflict Management and Resolution (CMR) and peer mediation training programs has increased. Though it would not be possible for CJS to effectively respond to all of the local

educators who are interested in implementing CRR curricula, CRR will target its services to achieve the greatest impact possible.

The proposal conforms with the Attorney General's belief that a thoughtful, common sense approach is necessary to reduce violence. It also conforms with the Administration's desire to attack the problem of escalating youth violence across the country, and is extremely cost-effective when compared with the financial cost of hospitalization or incarceration, the cost in young lives, and the psychological trauma to the children and their families.

Addressing the Escalation of Hate Group Activity

CRR Conciliation resources will assist communities to establish and maintain environments that counter the growth of hate groups (target hardening against domestic terrorists), and which promote quick and effective response to victims of hate activity. CRR will coordinate with various Federal, state, and local entities to provide training and technical assistance on: police-community cooperation in addressing hate activity; building a statewide network and developing a statewide education program; what to do when hate literature is distributed in the community; trends in hate incidents and current hate organizations; police investigations of hate crimes occurring in the community and prosecution and conviction statistics; and responding to victims of hate crimes.

These activities will continue to build upon work CRR has done over the years with coalitions and groups committed to documenting and combatting hate incidents and hate crimes.

CRR's prevention case work directly addresses several of the Administration's major themes, including: empowering state and local government; emphasis on more direct service delivery to the public; cross agency collaboration to strengthen communities and families; expansion of the use of alternative dispute resolution; and enhanced recognition of the value of diversity and support for racial and ethnic harmony in an increasingly diverse society.

ADDITIONAL AREAS OF ANTICIPATED DEMAND FOR CMS MEDIATION AND CONCILIATION SERVICES DURING FY 1997 AND FY 1998

The following is an overview of the challenges CMS expects to face in delivering its conflict resolution and prevention services. It is based on the firsthand assessment submitted by CMS Regional Managers who were asked to undertake an analysis of the demand for CMS services anticipated in their respective geographical jurisdictions.

- I. Community tensions over national changes in immigration enforcement and welfare reform policies may require considerable CMS resources, especially in those communities with large populations of new arrivals and minority groups. Police Chiefs advise CMS that their officers' conflict resolution skill levels will be sorely tested and they expect CMS to equip their officers with enhanced new skills.
- II. Increased demand for CMS mediation services by tribal authorities, state officials and law enforcement involving a variety of issues including tax collection methods, toxic wastes, and intra-tribal tensions.
- III. Police/minority community tensions continue to remain very high in urban areas, indicated by volatile incidents and charges of excessive use of force.
- IV. Requests for CMS services from colleges and universities for CMS intervention to address conflicts between students and faculty and between faculty and faculty stemming from controversial speakers invited to speak on campus are expected to continue. Requests from campus security departments for assistance in preparing their staff to handle these crises to avoid unrest and/or lawsuits are anticipated.
- V. School systems seeking more assistance from CMS in Student Problem Identification and Resolution efforts to head off school disruption growing out of racial conflicts or perceptions are expected to increase for the foreseeable future.
- VI. Tensions over implementation of court ordered school desegregation have not disappeared. For example, school integration has been ordered in the state of Connecticut following a seven year fight. Requests for CMS assistance are anticipated from the U.S. Attorney and school officials in major Connecticut cities.
- VII. Requests for CMS conflict resolution and conciliation services by housing authorities undertaking extensive efforts to disperse public housing residents to resistant areas are expected to increase during FY-97 and FY-98.

- VI. CRS staff expects to assist with efforts undertaken by regional U.S. Attorneys working groups such as church burnings, gangs, and police urban youth initiatives.
- IX. Major national Marches on Washington (such as the 1993 Million Man March and the 1996 Hispanic March) may require multi-regional response by CRS during FY-97 and FY-98.
- X. CRS expects to address racial tensions over issues over Affirmative Action in educational forums and various forms of protest activities or conflict.

Conflict Resolution and Prevention
PROGRAM CHANGES:

	FOIA	FIS	Amount
Program Operations	30	15	\$2,008

The Community Relations Service is requesting a program enhancement of \$2,008,000 to address heightened community racial tensions through the provision of conflict resolution services by conciliation specialists and other staff located primarily in field locations.

The program enhancement is based on independent analyses of racial conflict and projected demands for CRS services. At least 12 riots (disturbances involving 50 or more people engaged in illegal and destructive behavior such as looting, assaults or arson) occurred in 1995, according to a study by criminologist Jack Levin. CRS reports show for FY 1996, 116 incidents of racially motivated violence resulting in injury or serious property damage, and 31 additional incidents of racially motivated violence resulting in serious injury or major property damage. Criminologists project a greater potential for riots based on demographics alone, citing such factors as an expected ballooning of the teenage minority population over the next decade, additional economic dislocation, and higher urban unemployment.

Firehand assessments by CRS Regional Managers. As noted above, project demand for CRS services to help resolve community racial conflict over intensified immigration and drug enforcement activities; volatile incidents and charges of excessive police use of force (e.g., St. Petersburg, Florida disturbances); tribal/state conflicts over tax collection methods and sovereignty issues; campus conflicts over the presence of controversial speakers and status of minority studies programs; and public school tensions growing out of racial conflicts.

BASE PROGRAM DESCRIPTION: Conflict Prevention and Resolution - Due to the drastic headquarters downsizing of CRS during 1996, virtually all of the functions of management and administration were transferred through a Comprehensive Memorandum of Understanding (MOU) with the Executive Office of United States Attorneys (EOUSA). Management and administrative functions undertaken for CRS by EOUSA include personnel, procurement, administrative processing, technological, accounting, financial and payment services.

A core of CRS Program Operations leadership staff will continue to provide executive direction and control including strategic and operational planning, coordination, policy development and guidance for program operations.

Justification of Adjustments to Base
(Dollars in thousands)

	Perm Est.	Work- years	Amount 1987	Amount 1988
1 1988 pay raise. This request provides for the proposed 2.5 percent pay raise to be effective in January of 1988 and is consistent with the Administration policy included in the 1988 President's Budget request. This increase includes locally pay adjustments as well as the general pay raise. The amount requested, \$44,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$74,000 for pay and \$10,000 for benefits).				\$44
2 Amendment of 1987 pay/paid. The pay amendment represents first quarter amounts (October through December) of the 1987 pay/paid of \$10,000. This request includes locally pay adjustments for the first quarter of the year plus appropriate benefits (\$25,000 for pay and \$5,000 for benefits).			30	
3 Within-grade increases. This request provides for the expected increases in costs of within-grade increases. The increase is based on an accurate dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-quarter pay/paid for pay and \$7,000 for benefits.			43	
4 Correspondence Management System. An increase of \$4,000 is requested in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.			4	
5 Investigation/Intelligence. Enclosure Order 10450 "Security Requirements for Government Employees" requires that appointments of new officers and employees of the Department of Justice be subject to investigation. The request is for the cost of additional personnel and resources required to conduct the investigation. The request is for the cost of additional personnel and resources required to conduct the investigation. The request is for the cost of additional personnel and resources required to conduct the investigation.			1	
6 General initial local adjustments. This request applies OMB pricing guidance in selected expense categories. The increased costs identified result from applying a factor of 2.5 percent against these subject classes where the price that the Government pays are established through the market system issued at by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and others.			11

Independent Counsel Permanent Indefinite Appropriation

Summary Statement

Fiscal Year 1998

In the 1988 Appropriations Act, Congress established a permanent indefinite appropriation to fund the expenses of Independent Counsel investigations and prosecutions. Under this appropriation, all necessary costs and expenses incurred in the pursuit of these investigations will be funded from amounts available in the Treasury.

Independent Counsel investigations were authorized by Congress in the 1978 Ethics in Government Act. The Authorization expired December 15, 1992, five years after the enactment of the Independent Counsel Reauthorization Act of 1987. However, the provisions of the chapter remained in effect for on-going investigations. In June 1994, the Independent Counsel Reauthorization Act of 1994 was signed into law.

The FY 1998 funding estimate includes funding for existing counsel, but does not include the effects of inflation or funding for future counsel.

Program Performance Information
Government Performance and Results Act Requirements

Mission: To implement the provisions of the Ethics in Government Act of 1978 (28 U.S.C. 591 et seq., as amended), pertaining to the appointment and functions of the various Independent Counsel.

Organizational Goals:

1. To investigate allegations of misconduct by high-level officials of the Executive branch whenever a preliminary investigation by the Attorney General results in an application for appointment of an Independent Counsel.
2. To conduct proceedings before grand juries and other investigations.
3. To review all documentary evidence from any source.
4. To initiate and conduct prosecutions in any court of competent jurisdiction, including the framing and signing of indictments, the filing of information, and the handling of all aspects of cases.

ACTIVITY: INDEPENDENT COUNSEL

1997 Appropriation Anticipated	\$9,500
1998 Base	9,500
1998 Estimate	9,500
Increase/Decrease	...

BASE PROGRAM DESCRIPTION. Independent Counsel investigations were authorized by Congress in the 1978 Ethics in Government Act. The authorization expired December 15, 1992, five years after the enactment of the Independent Counsel Reauthorization Act of 1987. However, the provisions of the chapter remained in effect for ongoing investigations. In June, 1994, the Independent Counsel Reauthorization Act of 1994 was signed into law.

In order to facilitate functioning of these counsel and maintain their independence from the Department of Justice, a working arrangement was implemented in 1986 between the Administrative Office of the U.S. Courts (AUSC) and the Department of Justice for the administrative support of Independent Counsel investigations. In a letter of agreement between the Department and AUSC, the Department was responsible for funding the appropriate costs of any Independent Counsel, while AUSC was responsible for the disbursement and accounting of such funding. The Independent Counsel Reauthorization Act of 1994 directs AUSC to provide administrative support and guidance to each Independent Counsel.

The Department provides funding periodically to AUSC. This funding is available to pay the appropriate costs of any active Independent Counsel. Under P.L. 100-202, an Act making further

continuing appropriations for 1988, a permanent indefinite appropriation was established. This authorization is included within the General Legal Activities appropriation language (101 Stat. 1329-9). All necessary funding is to be provided from general funds in the Treasury on an as needed basis. The Congress has directed the Comptroller General to conduct semiannual financial audits.

	INDEPENDENT COUNSEL INVESTIGATIONS COSTS			
	Subject	Outcome	FY Begun	Cost
COMPLETED: Special Counsel Paul J. Curran	Improper financial transactions between the Carter Peanut Warehouse and the National Bank of Georgia		1979	\$162,809

Summary Statement
Fiscal Year 1998

The Civil Liberties Act authorized a total funding level of \$1.65 billion. This fund is used for two purposes: to make redress payments of \$20,000 each to Japanese-Americans who were interned, evacuated, or relocated during World War II; and, to fund educational activities about the internment and evacuation to prevent the recurrence of any similar event. Funds are available until August 1998, the sunset date of the legislation.

No additional funds are being requested for 1998. Outlays for both payments to eligible individuals and Board related expenses, for 1997 and 1998, will be paid from available no-year funding.

BASE PROGRAM DESCRIPTION: The Civil Liberties Act of 1988 authorizes the appropriation of funds to establish a fund in the Treasury of the United States, Public Law 101-161, enacted November 21, 1989, established the fund as an entitlement program. The Civil Liberties Amendments Act of 1994 authorized an additional \$400 million, providing a total funding level of \$1.65 billion. Funds are available until expended.

This fund is used for two purposes: to make redress payments of \$20,000 each to Japanese-Americans who were interned, evacuated, or relocated during World War II, and, to fund educational activities about the internment and evacuation to prevent the recurrence of any similar event. Both activities are authorized by the Civil Liberties Act of 1988.

The redress provisions of the Act are administered by the Civil Rights Division. The General Services Administration (GSA) provides support for the educational activities, which is administered by a board appointed by the President.

OPA's workload includes making eligibility determinations on the remaining unique cases, and disbursing payments to eligible individuals. OPA has disbursed over 97 percent of the \$1.645 billion available, representing 80,120 cases. Additionally, OPA continues to monitor a helpline and respond to correspondence from individuals inquiring about the status of their claim. OPA continues its aggressive outreach efforts in the Japanese-American community, which have included several workshops around the country, and regular contact with community leaders through monthly updates and press releases. OPA also distributes pamphlets and other materials to the public with information regarding the redress program and unknown individuals.

OPA's goals for 1997 and 1998 include locating the remaining 3,100 individuals for whom OPA has been unable to gather current information in relation to OPA's historical records. OPA is required by the Act to account for each of these individuals. OPA also plans to make final legal determinations on approximately 400 unique cases. In addition, OPA will continue developing a phase-down plan for its operations, as the

program has a sunset date of August 1998. All computerized and hard-copy historical records relating to the interim period will be archived as part of this plan.

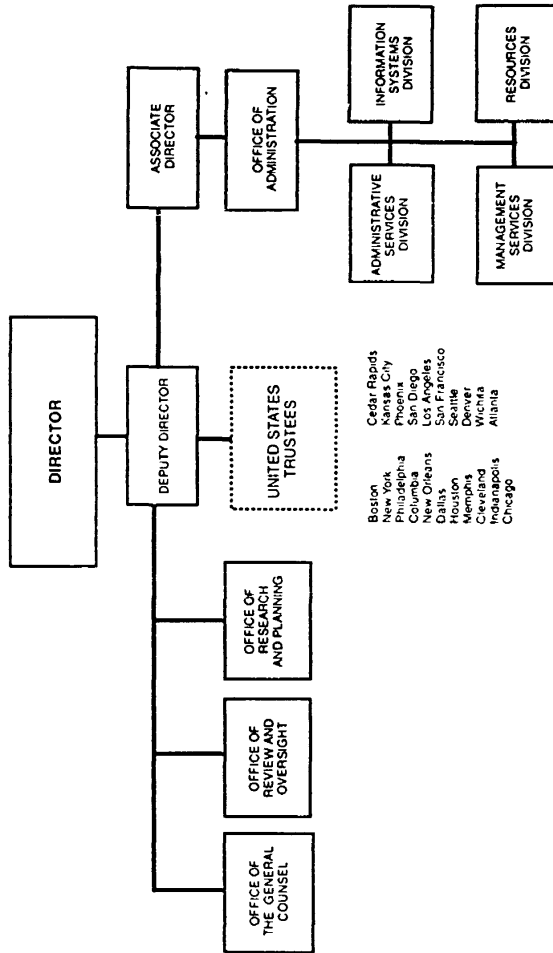

A July 6, 1995, Federal Appeals Court reversal in the case of *Douglas L. Ishida v. United States* will affect the eligibility of nearly 1,300 cases. Based on the adverse court decision substantial manpower support will be required to review these cases. Since approximately 3,000-5,000 other individuals, not currently identified, may file similar claims, the increase in the FY 1997 outlay projection is mostly attributed to approximately 1,000 cases which are expected to be eligible for redress based on the *Ishida* decision. Work has been completed on these cases and the Department is currently reviewing them. The Department is working on regulations making these cases eligible and published in the Federal Register. We anticipate the regulations will be finalized in February 1997 and payments will be made during the remainder of the fiscal year.

Further, another lawsuit, *Marion Kanemoto, et al. v. William Barr, et al.*, No. C92-20610, was filed on March 22, 1995. This case involves 14 plaintiffs who were minor children during the war and who were relocated to Japan with their parents. The Act excluded from eligibility any person who returned to Japan during the war. However, based on the Department's new legal interpretation of this statutory language that only those persons who returned voluntarily are ineligible, the minor children who returned involuntarily to Japan are now eligible for redress. Thus the lawsuit was stayed and regulations were finalized to make this category of claimants eligible. This regulation made about 130 current claims eligible for redress. OHA is unable to project the number of additional eligible persons, who have not yet contacted OHA, because of the lack of data. With some of the historical records, but may have as many as 200 additional cases not currently identified.

**United States Trustee Program
Salaries and Expenses
Summary Statement
Fiscal Year 1998**

The United States Trustee Program for 1998 is requesting \$116,721,000 in new offsetting collections authority, 1,145 positions and 1,068 workyears. This amount, along with an estimated \$3,000,000 in excess 1997 offsetting collections available for obligation on October 1, 1997, will bring the Program's total funding authority to \$119,721,000. This request represents an increase of \$10,594,000, 100 positions, and 51 workyears over the 1998 base level.

Mission: The United States Trustee Program acts in the public interest to promote the efficiency and to protect and preserve the integrity of the bankruptcy system. It works to secure the just, speedy, and economical resolution of bankruptcy cases; monitors the conduct of parties and takes action to ensure compliance with applicable laws and procedures; identifies and investigates bankruptcy fraud and abuse; and oversees administrative functions in bankruptcy cases.

Accomplishments: The fall of 1996 marked the ten-year anniversary of the permanent establishment of the United States Trustee Program as the independent agency responsible for overseeing the administration of bankruptcy cases.¹ As the Program enters its second decade, the National Bankruptcy Review Commission is proceeding with its charter to investigate and study issues and problems relating to the Bankruptcy Code and to report back to the Congress, the Chief Justice, and the President with its findings, conclusions and recommendations. It is interesting to note that the one subject that has not been discussed or even suggested as an agenda item of the Commission is the problem of "cronyism, bankruptcy rings, and insider appointments" that infested and infected the system prior to the establishment of the U. S. Trustee Program.

Those words which at one time dominated every discussion of bankruptcy reform, every report on the bankruptcy system, and every bankruptcy scandal, are no longer a part of the vocabulary of bankruptcy reform. The Program has carried out its intended role as the watchdog over the bankruptcy system, eliminating the costly, conflicting relationships that in past days polluted the bankruptcy process and undermined its integrity.

The National Academy of Public Administration concurred with this conclusion in its 1995 Report, "Alternative Structures for the United States Trustee Program," when it stated--

¹ The Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (P.L. 99-554).

² The Donovan Report of 1931; the Thatcher Memorandum, transmitted to Congress in 1931; and the Report of the Commission on the Bankruptcy Laws of the United States, 1973.

...the USPT was established to improve bankruptcy administration and to increase the public's confidence in the bankruptcy system. The overwhelming weight of testimonial evidence supports the conclusion that the program has achieved this primary mission.

The Program has taken significant steps to build upon its achievements and to improve its work:

- We have increased access to program operations and policies by actively soliciting and welcoming outside comments and constructive suggestions from the bankruptcy bench and bar, national bankruptcy associations, and the general public.

An Advisory Board has been created where bankruptcy judges join with U. S. Trustees to review comments, receive presentations from the bench and bar, and discuss policies and initiatives.

For the first time in its history, the Program has solicited public comment on its policies, (e.g., the Professional Fee and Expense Guidelines, and the Chapter 13 Ethical Standards). These policies have been revised to incorporate the comments and suggestions received. We will continue to seek public comment from the bar and other bankruptcy professionals during the early stages of policy development.

- The Program is working to move cases through the system more quickly.

In Chapter 7, a system to identify old cases has been in place since 1992, and the percentage of our caseload that is considered old (after 3 years) has been reduced from 17.2 percent in April 1992 to 3.3 percent in October 1996.

In Chapter 11, we are trying to replicate the success we have had in closing old chapter 7 cases. In the past in chapter 11, our practice has been to wait for evidence that a case is languishing before moving to dismiss or convert the case to a chapter 7. With better analysis, staff will seek early identification of hopeless cases or those that are "dead on arrival". If there is no hope that the debtor will successfully reorganize, early identification is critical to prevent cases from languishing and assets from dissipating. Our training has been redesigned to focus not only on bankruptcy law, but also on the dynamics of the bankruptcy process.

- We have begun a review of our statistics and data collection resources to determine what we currently collect, what we can reasonably expect to collect, and how we can use that information to produce benefits for the program through performance measurement, for the entire bankruptcy system, and for the public.

1996 Initiatives: By virtue of its unique position in the bankruptcy system, the United States Trustee Program has tremendous potential for future achievements. We are involved in every bankruptcy case from the time it is filed until it is finally closed. In its short history, we have made significant progress. This budget submission looks to the future to address the needs of the Program and the bankruptcy system. The Program's 1996 budget request, funded entirely from offsetting collections, requests the following enhancements:

- Caseload Initiative: \$4,952,000, 80 positions (35 attorneys), and 40 workyears to meet the historic increase in bankruptcy filings that exceeded 1.1 million filings during fiscal year 1996;
- Bankruptcy Fraud Initiative: \$1,049,000, 35 positions (12 attorneys), and 8 workyears to professionalize our efforts against fraud and address high profile issues in bankruptcy;
- National Bankruptcy Research Database: \$1,424,000, 2 positions, and 1 workyear to develop a National Bankruptcy Research Database that will provide a panoramic statistical view of the entire bankruptcy system;
- Automated Fee Application Review: \$2,000,000 to expand the Automated Fee Application Review Project to a number of large and small chapter 11 field offices;
- Security: \$608,000 to provide improvements in security at Program offices and meeting rooms throughout the country;
- Private Trustee Electronic Interface: \$700,000 to develop an electronic interface to facilitate the exchange of bankruptcy case data between private trustees and the United States Trustee Program and to increase the flexibility of the Program's oversight;
- Improved Criminal Database Access: \$104,000, 2 positions, and 1 workyear to improve criminal database access through agreements with the Financial Crimes Enforcement Network (FINCEN) at the Treasury Department and other organizations and agencies;
- Electronic Freedom of Information Act (FOIA) Access: \$257,000, 1 position, and 1 workyear to permit the Program to meet statutory requirements to respond to FOIA requests through the electronic transfer of data and documents.

United States Trustee System Fund

Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

United States Trustee System Fund

For necessary expenses of the United States Trustee Program, as authorized by 28 U.S.C. 589a(a), [\$107,950,000], to remain available until expended and to be derived from the United States Trustee System Fund. Provided, That notwithstanding any other provision of law, deposits to the Fund shall be available in such amounts as may be necessary to pay refunds due depositors. Provided further, That notwithstanding any other provision of law, [\$107,950,000], \$116,721,000 of offsetting collections derived from fees collected pursuant to 28 U.S.C. 589a(b) shall be retained and used for necessary expenses in this appropriation and remain available until expended. Provided further, That the sum herein appropriated from the Fund shall be reduced as such offsetting collections are received during fiscal year [1997], so as to result in a final fiscal year [1997] appropriation from the Fund estimated at \$0. Provided further, That any such fees collected in excess of [\$107,950,000], in fiscal year [1997], shall remain available until expended but shall not be available for obligation until October 1, [1997], \$116,721,000 1998

[Public Law 104-208, Department of Justice Appropriation Act, 1997]

Program Performance Information
Government Performance and Results Act Requirements**

Mission: The United States Trustee Program acts in the public interest to promote the efficiency and to protect and preserve the integrity of the bankruptcy system. It works to secure the just, speedy, and economical resolution of bankruptcy cases; monitors the conduct of parties and takes action to ensure compliance with applicable laws and procedures; identifies and investigates bankruptcy fraud and abuse; and oversees administrative functions in bankruptcy cases.

General Goals: The primary goals of the United States Trustee Program ("the Program") are --

1. To assure that bankruptcy cases are administered with dispatch and that all parties comply with their legal obligations.
2. To assure that the cost of administering bankruptcy cases is appropriately monitored so that it is economical and expeditious, that assets are not dissipated, and that distributions to creditors are maximized.
3. To assure that private trustees adhere to fiduciary standards and observe consistent national procedures and policies and to assure that violations of applicable criminal laws are referred to law enforcement and regulatory agencies.

BASE PROGRAM DESCRIPTION: The Administration of Cases Decision Unit has a base program of 995 positions (198 attorneys), 967 workyears, and \$100,894,000. The United States Trustee Program is entirely funded through fees paid by participants in the bankruptcy system. The Fiscal Year 1997 Appropriations Act reclassified all of the fees collected by the Program as offsetting collections. Thus, all funding requested for fiscal year 1998 is from offsetting collections. The Program estimates it will collect \$3,000,000 more in offsetting collections during fiscal year 1997 than it has the authority to spend. The 1997 Appropriations Act makes those excess offsetting collections available for obligation on October 1, 1997. The 1997 excess offsetting collections have been used to partially fund the requested fiscal year 1998 enhancements.

The Bankruptcy Reform Act of 1978 established the United States Trustee Program on a pilot basis in 18 Federal judicial districts. With the enactment of the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986 (P.L. 99-554), the United States Trustee Program was expanded nationwide to 88 Federal judicial districts. The six judicial districts of North Carolina and Alabama are exempt from the Program until the year 2002.

The major thrust of these nationwide reforms was to separate the adjudicative and administrative functions in bankruptcy cases. Congress created one agency with responsibility for the administration of bankruptcy estates and to serve as a "watchdog" over the entire bankruptcy process. The Program completed its nationwide expansion in 1989 under the transitional provisions of the 1986 Act. Currently, the Program operates 93 United States Trustee offices nationwide which are responsible for the oversight of over one million bankruptcy cases.

PROGRAM CHANGES		Pos.	FY	Amount
Caseload Increase.....		80	40	\$4,952

This initiative seeks to address the following objectives:

to ensure that bankruptcy cases are administered with dispatch and that all parties comply with their legal obligations.

to ensure that attention is paid to the administration of those cases where creditor interest is lacking.

This initiative requests 80 positions, 40 workyears (25 attorneys), and \$4,952,000 in offsetting collections funding to address the increase in bankruptcy filings that will occur over the 1996 - 1998 period in chapters 7 and 13 and the increase in the chapter 11 workload due to new post confirmation responsibilities. The request includes 25 attorneys, 25 bankruptcy analysts, 15 paralegals and 15 legal clerks.

In 1996, consumer bankruptcy filings increased at unprecedented rates, resulting in filings in excess of 1.1 million. The increase was initially detected during the first quarter of calendar year 1996. United States District Court Judge Paul A. Magnuson, Chairman of the Committee on the Administration of the Bankruptcy System for the Judicial Conference of the United States, testified before the Senate Judiciary Committee in April 1996, that bankruptcy filings for the first quarter of the calendar year increased by 25 percent over first-quarter 1995 filings.

This data was buttressed by an independent study completed by MasterCard International and reported in the *Wall Street Journal* on May 8, 1996, which found that bankruptcy filings rose 27 percent between January 1 and April 28, 1996, the largest 4-month rate of increase since 1986. The increase in filings continued throughout the year, resulting in more than one million bankruptcy case filings during the 12 months ending June 30, 1996.

This was the first time in history that there have been more than one million filings in a 12-month period. The previous 12-month high occurred in the 12 months ending September 30, 1992 when 977,434 cases were filed. Filings for the 12-months ending September 30, 1996, continued their upward trend with actual filings for that period totaling 1,111,917. Current estimates indicate bankruptcy filings, driven by very high levels of consumer debt, will continue to increase. Thus, the United States Trustee Program will face significant caseload increases over the next several years.

Filing statistics also indicate that the overall downturn in chapter 11 has abated. An analysis of individual judicial districts, shows that the rate of increase is substantial in some of our traditionally larger chapter 11 districts. During fiscal year 1996, chapter 11 filings grew by 30 percent in New York City, 37 percent in Baltimore, 11 percent in Chicago and 23 percent in Seattle.

Historically, bankruptcy filings ebb and flow. In the 16 years since 1980 for which there is actual data, total filings have increased in 12 of those years. Decreases occurred over the two-year period from 1982-1984 and again over the two-year period from 1992-1994. Since enactment of the Program's nationwide expansion legislation in 1986, total bankruptcy filings have grown by 119 percent from 507,544 in 1986 to 1,111,917 in 1996.

Filing increases seriously impact the responsibilities of the United States Trustee Program. The Program carries out its mission through two basic areas of responsibility:

- The non-discretionary tasks necessary to move the growing volume of cases through the bankruptcy courts serve to promote efficiency and help ensure the speedy resolution of bankruptcy cases; and
- Our supervisory responsibilities as the Bankruptcy Watchdog serve to protect and preserve the integrity of the bankruptcy system by requiring that participants in the system adhere to the standards of the law.

As filings increase, the administrative tasks grow proportionately and the important steps that the Program has taken to improve the integrity of the bankruptcy system are subsumed by the burgeoning caseload. Unlike other organizations, the workload of the United States Trustee Program is uncontrollable. The Program cannot decline cases and must perform certain tasks in every single bankruptcy filing. Every case must be reviewed before it closes to ensure that all assets have been disclosed and that estate funds are properly paid out to creditors. Until the time that a case is physically closed, no estate money can flow back into the system. The 14 percent growth in authorized staff that has occurred since our nationwide expansion is simply not sufficient to handle a 119 percent growth in caseload. In addition, the Program has sustained large cuts in on-board staff over the last several years. The FY 1997 budget included a reduction of 65 positions. Those reductions coupled with attrition and streamlining efforts have resulted in reductions of nearly 200 positions since FY 1993.

Without a modest increase in staff to address the additional caseload, our critical supervisory role will be diminished with a resultant decrease in system integrity. The increase in caseload per private trustee raises the possibility of mistakes, undue delays, or even embezzlements. Yet, as risks reach new heights, the Program's ability to confront these situations is constrained. Program staff will be so busy simply moving the growing caseload through the system that the more time consuming, supervisory responsibilities will simply fall by the wayside. Already, many of our offices are becoming dysfunctional as core staff leaves and hiring freezes prevent their replacement.

The Program's growth has also not kept pace with the growth in bankruptcy judgeships. There are presently 326 sitting bankruptcy judges, and the bankruptcy courts have requested the establishment of an additional 11 judgeships. The

current ratio of 1 attorney to every 1.6 bankruptcy judges causes tremendous pressure on our staff to meet the demands of the courts. Program attorneys are expected to actively participate in bankruptcy court hearings. Yet, it becomes increasingly difficult to manage those responsibilities when the courts sit in more than 200 locations than the Program has offices and attorneys in some areas are expected to appear in more than one case at a time.

The Program's workload is also impacted by its responsibilities for post-confirmation chapter 11 cases, those cases that have had reorganization plans confirmed by the bankruptcy court. These responsibilities include debtor oversight to assure required reports are filed, payments to creditors made, and plan provisions complied with. The 1996 appropriation included legislative language to extend chapter 11 quarterly fees into the post-confirmation stage. This legislative change was made at the request of the Program; however, the 1996 budget submission also included a request for an additional 37 positions and 19 workyears to meet those new responsibilities. No additional personnel resources were approved in the 1996 enacted appropriation. In fact, the Program's final appropriation was \$699,000 less than its FY 1995 enacted level and \$4.8 million below its 1996 base. Thus, the Program's responsibilities have grown while its personnel resources have diminished.

Finally, it is critical that the Program intensify its oversight of trustees who are appointed to serve in chapter 11 cases. There have been a number of instances in which the performance of trustees appointed in chapter 11 cases has been questioned and justifies the need for more intensive oversight.

The modest number of additional positions requested in this initiative will help to meet the additional responsibilities assumed by the Program (both in terms of post-confirmation responsibilities and increased responsibilities in the area of debtor fraud), as well as addressing the projected caseload increases. It is critical to ensuring that the United States Trustee Program has the resources necessary to continue to fulfill its role as the bankruptcy watchdog.

Bankruptcy Fraud.....	Pos.	FTE	Amount
	15	8	\$1,049

This initiative seeks to address the following objective:

eto assure that violations of applicable criminal laws are referred to law enforcement and regulatory agencies.

This initiative requests 15 positions (12 attorneys), 8 workyears and \$1,049,000 in offsetting collections to address high profile issues in bankruptcy fraud such as health care fraud, fraud against the low income and elderly and environmental fraud. The positions would be used to increase the professionalism of the Program's bankruptcy fraud efforts through the establishment of a national team of bankruptcy fraud specialists whose expertise would be available across Program regions to support the investigation of bankruptcy fraud. It would also include the hiring of an individual to coordinate this fraud component.

On February 29, 1996, the Attorney General announced Operation Total Disclosure, a nationwide cooperative law enforcement effort aimed at prosecuting bankruptcy fraud. In announcing this new initiative, the Attorney General noted that, "Our economy depends on there being a trustworthy system that protects lenders and is fair to everyone. Bankruptcy fraud victimizes all of us."

This new cooperative initiative combines the investigative efforts of the United States Trustee Program with those of the United States Attorneys, the Federal Bureau of Investigation, the litigating divisions of the Department of Justice, the Postal Inspection Service and the Internal Revenue Service in identifying and prosecuting bankruptcy fraud. It also provides joint training to participating agency staff to improve the investigative skills needed for cases involving financial fraud.

The initial success of Operation Total Disclosure has demonstrated that fraud in the bankruptcy system is widespread. The Program is increasingly urged by others (e.g., judges, trustees, national creditors' organizations) to do more to identify fraud and ensure that its perpetrators are sanctioned.

Where in the past the lightning rod of bankruptcy reform was the need to abolish "cronyism, bankruptcy rings and insider appointments," it is now the need to eliminate the widespread existence of debtor fraud. It is imperative that the Program respond to this threat to the system. Failure to do so will seriously undermine the underlying basis of our bankruptcy system -- that our national economic well-being is enhanced if those who encounter serious financial difficulties are provided a reasonable opportunity to restructure their financial affairs and repay their creditors.

The Program must increase its efforts to identify those large number of cases in which those who seek the protection of the bankruptcy system also contribute to its downfall by hiding assets or engaging in other illegal activities. Where appropriate, criminal referrals to other investigative and prosecutive agencies must be made. It is also critical that the imposition of civil remedies and sanctions are explored. Those individuals who willfully flaunt the law and undermine the integrity of the system must be held accountable for their actions. Civil remedies if appropriately applied can be an effective tool for demonstrating that fraudulent activities will not be tolerated.

This initiative will also address specific areas of bankruptcy fraud, including those scams which prey on the most vulnerable of our citizens, the low-income and elderly.

Health Care Fraud: In the last few years, there have been an increasing number of bankruptcy cases involving health care and welfare fraud. Chapter 11 reorganization petitions are often filed by perpetrators in these schemes to allow their activities to continue and to stall investigations of their actions. Examples of health care and welfare fraud include:

- **Bogus Health Care Plans** where the perpetrator establishes a bogus or grossly under-capitalized insurance plan to provide health care to individuals or companies at very favorable rates with no intent to provide services or pay claims;

•**Theft of Employee Contributions for Health Insurance** where the employer deducts the employee's share of insurance premium but does not remit the funds to the insurance company;

•**Sham Facilities** where nursing homes, shelters, drug rehabilitation programs, and other health-related homes are set up to secure federal and state funding but provide little or no service to the clients and convert the funds received for their own use. Often the perpetrators require clients to sign over their food stamps and welfare checks in order to remain at the shelter.

The Program has been able to identify these health care fraud schemes using a number of common characteristics in analyzing the cases. Some of these include complaints of poor or non-existent services, adverse publicity about the operations, the existence of ongoing investigations by state or federal regulators, failure to maintain normal books and records, the existence of unlicensed facilities, and the failure to remit deductions from employee paychecks to an insurance company.

Region 21 (Atlanta) has recently reported two cases involving health care fraud. The Augusta, Georgia-based Healthmaster Home Health Care, Inc., was sold at bankruptcy auction last year, after its owner pled guilty to Medicare fraud charges. In addition, the nation's largest private home-health care company, First American Health Care of Georgia, Inc., and its 30 subsidiaries in 23 states, filed chapter 11 petitions in the U. S. Bankruptcy Court for the Southern District of Georgia after a federal jury in Savannah found a co-owner guilty of 60 charges involving inflated bills submitted to Medicare which accounted for 97 percent of First American's annual revenues.

•**Fraud Against the Low Income and Elderly:** Petition mills and equity scams are a growing area of concern in bankruptcy because they prey on unsuspecting low income or elderly individuals in financial distress and offer a "too good to be true" solution to the individual's problems. Generally, the victim of the scheme is not aware that bankruptcy is part of the solution.

The individual running a petition mill or equity scam is a self-styled, unlicensed financial advisor/paralegal/eviction counselor who solicits clients from eviction and foreclosure publications. The perpetrator promises to help people with their financial problems suggesting that mortgage rates can be lowered, interest rates reduced, car payments lowered, and evictions or foreclosures halted. Examples of such fraudulent scams include:

•**Financial Counseling Skim:** Homeowners whose properties are in foreclosure are contacted and told that the consultant will find a new lender to take over the delinquent mortgage. The homeowner is instructed to make mortgage payments to the consultant who fails to refinance the mortgage, keeps the victim's payments and files bankruptcy, many times without the victim's knowledge.

•**Property Title Skim:** In this fraudulent scheme, the perpetrator will convince the victim to deed his home over to him for little or no cash. The victim then pays rent to the perpetrator who does not pay the existing mortgage or seek new financing. Bankruptcies are filed to delay foreclosure. The end result is the victim loses his home.

Eviction Mills: Individuals or companies prey on tenants/owners about to be evicted from their apartments or homes. The mill holds itself out as an eviction counseling service and, instead of providing actual eviction defense services, will file a bankruptcy in the tenant's/owner's name to stay eviction. Often the tenant/owner does not even know that a bankruptcy has been filed or that he will be evicted once the stay is lifted or the bankruptcy dismissed.

The U. S. Trustee Program has been successful in breaking up scams that prey on the low income and the elderly. In May 1995, the Associate Attorney General, along with the United States Attorney, the United States Trustee for Region 11 (Chicago), and the FBI, jointly announced seven separate multi-count indictments against bankruptcy petition preparers, who preyed upon distressed homeowners about to lose their homes to foreclosure. Over 100 individuals were victims of this scheme.

In March 1996 in Region 16 (Los Angeles), the operator of a financial and legal services business pled guilty to six counts of conspiracy, perjury and creating false tax returns in connection with the operation of a financial and legal services business. In the guise of helping poor people with evictions and other financial problems, the perpetrator would use clients' names and social security numbers to fraudulently obtain credit cards, cars, and other consumer goods for himself and then file bankruptcy for his clients. Bankruptcy petitions were filed for over 400 individuals without their knowledge, and using false social security numbers and other false information on the bankruptcy petitions.

In March 1996 in Region 21 (Atlanta) a federal grand jury returned a 30-count indictment against two individuals charging them with bankruptcy fraud, mail fraud, and social security violations. The perpetrators, falsely promising the victims that they could provide refinancing and legal assistance, filed fictitious chapter 13 petitions as part of a scheme to defraud homeowners facing mortgage foreclosures.

Environmental Fraud: The purpose of targeting environmental fraud is to look at companies that improperly use the bankruptcy laws to avoid massive liability arising from environmental toxins and pollutants. In many instances when a company is found to have violated environmental laws, it files for protection under the Bankruptcy Code. Environmental cases present administrative nightmares for private trustees, who are reluctant to accept such cases for fear of being targeted with personal liability. The initiative would establish a task force to look at specific cases and develop remedies to address the complex issues involved in these cases.

In Region 2 (New York) in January 1996, a United States District court convicted the owners of Envirotek, Ltd., a hazardous waste treatment and storage facility of bankruptcy fraud, perjury and conspiracy after an 8-week trial. The bankruptcy case was originally filed as a chapter 11 reorganization in February 1989. The defendants set up an elaborate scheme to divert and hide assets of the estate. Through the efforts of the Office of the United States Trustee, the debtor's operating authority was revoked in April 1989, and the case was ultimately converted to a chapter 7 liquidation. The conviction resulted from a criminal referral by the U. S. Trustee to the U. S. Attorney's office.

	Pos.	FTE	Amount
National Bankruptcy Research Database.....	\$1,309

This initiative seeks to address the following objectives:

to provide a source of empirical data about bankruptcy to be available to the Program and the Department, the bankruptcy bench and bar, the Congress and the general public.

to enable the Program to evaluate its performance and progress toward meeting its goals and missions using quantifiable data as a measurement tool.

This initiative requests \$1,309,000 in offsetting collections for the development of a National Bankruptcy Research Database. It builds upon the automation initiative requested in the Program's FY 1997 budget. In addition to the funding requested in the Administration of Cases Decision Unit, there is also a request for 2 positions, 1 workyear and \$115,000 associated with this project in the Management and Administration Decision Unit.

The United States Trustee Program has the potential to fill a void in bankruptcy administration -- the need for a panoramic statistical view of the entire bankruptcy system. Currently, there is no national database for bankruptcy statistical information. The Statistics Division of the Administrative Office of the United States Courts, compiles and reports filing statistics. However, their statistics capability does not extend to other questions which arise regarding bankruptcy. At the present time, no one is able to provide empirical data on questions such as --

• Who are the debtors filing cases?

• Why are they filing?

• What are they doing while they are in bankruptcy?

• Does bankruptcy help them?

• What are the results, e.g., the successes and failures of the cases?

The United States Trustee Program has a unique position in the bankruptcy system and could potentially fill this void in statistical collection and analysis of "inside the case" information. In every case, the debtor files schedules that summarize its financial condition and testifies in a § 341 Code (11 U. S. C. § 341) meeting relating to the causes of bankruptcy. The Program monitors all cases and their progress.

Unfortunately, the Program has not had the technological capability to capture and analyze all of this information. Analytical bankruptcy data could be a powerful tool in helping the United States Trustee and their staffs to do their jobs more effectively by providing a means for measuring performance and determining what works and what doesn't.

For example, it will enable the Program to capture and extract data such as the number of criminal referrals and complaints that are received, the amount of time required to respond to inquiries, the amount of time on average that

is required to appoint a private trustee in a bankruptcy case, and whether we are able to meet established timelines for performing certain functions such as reviewing final asset reports in chapter 7 cases.

It would also help bankruptcy professionals, academics, and ultimately the Congress when considering the workings of bankruptcy law or even larger trends in the economy. With this information, analysts might be better able to determine the underlying causes for fluctuations in filing statistics. For example, are the recent increases in chapters 7 and 13 filings a result of the abuse of consumer credit or are they related to downsizing, dislocation, and corporate re-engineering or to such factors as inadequate automobile and health insurance coverage?

The FY 1997 appropriation provided resources for a new automation system for the Program -- the U. S. Trustee Information Management System (USTIMS) which will include a new automated case management system (ACMS) and enhanced electronic communications capacity. The National Bankruptcy Research Database Initiative builds upon USTIMS. Bankruptcy case information will be extracted from the Automated Case Management System and other sources and input into a national database providing a complete and exhaustive source of nationwide bankruptcy data. Research and trend analysis staff will be able to manipulate the database to produce reports that will be made available to individuals both inside and outside the Program.

Automated Fee Application Review Expansion.....	Pos.	ZKS	Amount
	\$2,000

This initiative seeks to address the following objectives:

to assure that the cost of administering bankruptcy cases is appropriately monitored so that it is economical and expeditious, that assets are not dissipated, and that distributions to creditors are maximized.

The Program is requesting \$2,000,000 in offsetting collections to expand its automated fee application review pilot project to 9 or 10 of the Program's largest chapter 11 cities and several smaller chapter 11 cities.

The 1994 Bankruptcy Reform Act directed the United States Trustee Program to implement procedural guidelines for the review of professional fees in bankruptcy cases. The Program finalized those guidelines on January 30, 1996. These new guidelines facilitate the review of professional fee applications by better enabling the reviewer to evaluate the nature, extent, and value of the services for which the reimbursement of expenses is sought. The standardized format for providing professional fee information also permits automated review and analysis of the data. Routine computerized analysis of fee applications results in more thorough review of such applications, greater specificity in the nature of the objections filed with the court, and greater consistency in the nature of the objections raised.

The Program instituted a pilot project for the computerized analysis of professional fees in its Los Angeles Office. Legal firms which have agreed to participate in the pilot submit their fee applications in an electronic format. These fee applications undergo computerized analysis and a report highlighting items outside reasonable parameters is provided

to the United States Trustee. The project has been successful in identifying unauthorized expenses, excessive charges for authorized expenses, and tasks billed at a rate excessive for their nature. In some fee applications, those objectionable practices have accounted for nearly one-quarter of the total fees billed. The United States Trustee reviews the computerized analysis and determines whether an objection to the bankruptcy court is appropriate.

The cost of bankruptcy, and particularly the magnitude of professional fees in bankruptcy cases (roughly estimated to be in the range of \$1.2 - \$1.5 billion annually nationwide), has been an issue of concern to the Congress over the years. The tools are now available to perform a more thorough review of professional fee applications and to consistently identify unreasonable or unjustified items included in the fee request. It is also expected that computer analysis and review will impact the future billing practices of professionals.

Security.....	FOIA	RTS	Amount
.....	\$608

This initiative seeks to address the following objective:

To protect the integrity of the bankruptcy system by ensuring that threats against participants are dealt with appropriately and expeditiously.

This initiative requests \$608,000 in offsetting collections for improvements in the Program's security at its offices and meeting rooms throughout the country.

Since the bombing of the Murrah Federal Building in Oklahoma City on April 19, 1995, there has been heightened awareness of the need for security for U. S. Trustee Program offices and meeting rooms. The General Services Administration (GSA) has taken the lead in addressing perimeter security in federal buildings and leased space. This initiative requests funding for security upgrades that will not be addressed by GSA. The monies requested will be used to complete the installation of duress alarms and secured reception areas in the Program's district offices; provide duress alarms in our permanent space remote meeting rooms where § 341 Code meetings of debtors and creditors are held; provide magnetometers for meeting rooms in several of our major cities which are in building space that will not otherwise have access to such equipment; and provide for the use of contract security guards at § 341 Code meetings, as necessary.

The United States Trustee Program and the private trustees who use the Program's meeting rooms, must deal with literally millions of individuals every year during the § 341 Code meetings in which bankruptcy petitioners are required to reveal their assets. In recent months, both Program staff and private trustees have cited a need for heightened security. The bankruptcy process is adversarial, as debtors often are required to hand over assets that will be liquidated to satisfy credit obligations. The Program is becoming aware of the increased frequency of incidents in which the safety of trustees and program staff is threatened. Debtors are often agitated and have been found to carry guns and other weapons to meeting rooms. On some occasions, the bankruptcy court has intervened, asking United States Marshals to provide security for § 341 Code meetings.

The United States Marshal's Office in Atlanta, Georgia provided statistics regarding property taken by security personnel over several years at the Richard Russell Federal Building. It is interesting to note that immediately following the move of the U. S. Trustee's Office from the 14th floor of the building (inside the Marshal's security perimeter) to the 3rd floor (outside the security perimeter) in March 1992, the number of confiscated knives reported by the U. S. Marshal's Office dropped from 1,518 in March 1992 to 786 in April 1992 and subsequently has not exceeded 851. This 48 percent decline in knife confiscations is attributed to the fact that the Marshal's Service was no longer screening participants in § 341 Code meetings. The Marshal's Office also advised our Atlanta Office that confiscated handguns primarily belonged to two categories of individuals -- law enforcement personnel and people attending the § 341 Code meetings.

There are a number of examples which point to the need for increased security at § 341 Code meetings:

• The head of a local militia in upstate New York (Region 2) filed for bankruptcy protection under chapter 13 (wage earner repayment) of the Bankruptcy Code. The debtor had developed a repayment plan to satisfy the arrearage on his home mortgage; however, the mortgage holder objected to the plan. When the debtor was notified of the objection by the trustee at the § 341 Code meeting, he threatened the trustee and his staff. Being a member of the local militia, this debtor espoused the ideological, anti-government rhetoric typical of these groups, many of which question the constitutionality of the federal government, its laws and courts, including the bankruptcy process.

Many of the so-called patriot groups today are linked to extremely dangerous and violent militant groups of the 1980s such as the Posse Comitatus and The Order, both of which have been known to carry out acts of violence against those who interfered with their causes. The bankruptcy system becomes a target for many of these groups both by the nature of the process, particularly when foreclosures occur, and because of its extensive exposure to the public.

• The Program's Oklahoma City office (Region 20) has recently encountered Posse Comitatus opposition and problems. An agricultural sale of a Posse Comitatus member's farm, along with a number of random incidents of violence (e.g., shooting out the windows of vehicles) had the chapter 12 trustee so frightened for his personal security, that the bankruptcy judge directed the United States Marshal to provide security for the bankruptcy auction of real and personal property. The Marshals Service enlisted the additional support of the local sheriff and the state highway patrol to ensure that no violence occurred.

• In Ventura County, CA (Region 16) a gun dealer filed for bankruptcy protection. The filing of the bankruptcy petition resulted in threats against the petitioner. The situation was serious enough to require the provision of security at the § 341 Code meeting to protect Program staff and the trustee assigned to handle the bankruptcy.

• A chapter 13 trustee in West Palm Beach, Florida after being threatened by a debtor in a § 341 Code meeting, requested security for future meetings and inquired as to the availability of deputy U. S. Marshals to provide security at these meetings. This trustee noted that debtors must pass through metal detectors in order to perform benign tasks such as filing a petition with the bankruptcy court, while trustees remain unprotected against potentially dangerous debtors.

This initiative will permit heightened security for program staff, private trustees, and the millions of petitioners and public who appear at 341 code meetings by providing a means of summoning help in emergency situations and contracting for security guards to appear at meetings where it is suspected that a potential for violence exists.

Particulars	Pol.	Rs.	Amount
Private Trustee Electronic Data Interchange.....	\$200

This initiative seeks to address the following objectives:

to assure that private trustees adhere to fiduciary standards and observe consistent national procedures and policies.

to assure that the cost of administering bankruptcy cases is appropriately monitored so that it is economical and expeditious, that assets are not dissipated, and that distributions to creditors are maximized.

To increase the flexibility and reduce the burden on private trustees of assuring that cases are appropriately administered.

This initiative requests \$200,000 in offsetting collections for a pilot project to begin the development of an electronic interface to facilitate the exchange of bankruptcy case data between private trustees and the United States Trustee program.

Currently, the Program's oversight process is a manual one, requiring staff to review a variety of written materials. Program staff reviews reports on bankruptcy case assets after 180 days and prior to final distribution. They review trustee pleadings before the bankruptcy courts involving estate administration and the disposition of assets. Data is requested to ensure that cases are being closed as quickly as possible and that estate bank accounts are adequately collateralized.

Private trustees have complained about the amount of "paper" they must provide and the reality is that our staff is drowning buried in paper. The Program oversees 1,500 chapter 7 trustees, all of whom file semi-annual reports, and 169 outstanding trustees. The Program, acting on a suggestion of the National Academy of Public Administration (NAPA) in its early 1995 Report on Alternative Structures for the United States Trustee Program, is revising its trustee supervision initiatives to make the oversight process a more flexible one.

This pilot would allow the Program to design and test an electronic interface that would streamline the case management process, increase the flexibility of the Program's oversight, save time and money by providing a means for the Program, when appropriate, to perform desk audits rather than traveling distances to trustee offices, and provide for more timely transmission of reports.

Electronic transmission of documents is the future for government regulatory and oversight efforts. The incredible increase in information technology that has occurred in only the last two to three years, facilitates the elimination of paper copies that have been so necessary in the past. Smaller agencies such as the United States Trustee Program will be able to implement this new technology at reasonable costs where previously the cost of systems design for electronic transmission of documents was prohibitive, (e.g., the Securities and Exchange Commission's EDGAR system).

MANAGEMENT AND ADMINISTRATION

	POS.	FIS	Amount

1997 Appropriation Anticipated.....	50	51	\$8,055
1998 Base.....	50	50	8,233
1998 Estimate.....	53	53	8,702
Increase/Decrease.....	5	3	476

BASE PROGRAM DESCRIPTION: The Management and Administration Decision Unit has a base program of 50 positions (6 attorneys), 50 workyears, and \$8,233,000. This decision unit has a clearly defined leadership role in developing and directing the Program's long and short term goals, adopting uniform policies assessing the efforts of the Program's field offices, and conducting long-term research and planning; 2) supervising the Program's litigation activities; 3) conducting the inquiries into misappropriation of funds by private trustees; 4) developing audit policies and private trustee reporting requirements; 5) coordinating and supervising the resolution of the auditors and 6) providing administrative services such as personnel, procurement and contracts, automation, budget and finance, training, and facilities management.

The Executive Office for United States Trustees (EOUST) located in Washington, D.C. provides this centralized support. The EOUST is composed of the Office of the Director, the Office of the General Counsel, the Office of Review and Oversight, the Office of Research and Planning, and the Office of Administration.

Office of the Director: The Office of the Director provides comprehensive policy and management direction to the United States Trustees and their staff, as well as establishing policies and guidelines for the operations of the EOUST. It is responsible for developing and implementing streamlining initiatives, strategic planning, performance evaluation, and ensuring that the Program makes steady progress toward achieving its mission of improving the integrity of the bankruptcy system. The Office of the Director also has the primary responsibility for liaison with the Department, the Bankruptcy Courts, private trustee organizations, and the Congress.

General Counsel: The Office of General Counsel (OGC) provides legal support and training to attorneys in the field to ensure that the Program maintains consistently high standards of advocacy. It is involved in every major case, including all appeals. OGC is responsible for coordinating with the Department's Office of the Solicitor General. It provides house counsel services, reviewing program policies and proposing legislation. It also serves as the source of

ethics information and direction for Program personnel and is responsible for responding to inquiries made of the Program by Members of Congress and others.

Office of Review and Oversight: The Office of Review and Oversight (ORO) assists the U. S. Trustees in monitoring and supervising private trustees. It responds to questions from the field regarding issues of trustee supervision, analyzes financial records, and reviews the budgets of the chapter 13 standing trustees. ORO also collects program data and facilitates the peer review process.

Office of Research and Planning: The Office of Research and Planning is responsible for liaison with the public and the bankruptcy community on issues involving the bankruptcy process and the nature of the work performed by the United States Trustee Program. The office will also be responsible for developing and maintaining the national bankruptcy research database.

Office of Administration: The Office of Administration consists of four divisions -- Resources, Administrative Services, Management Services and Information Systems. The Office's responsibilities include managing the Program's independent personnel authority, managing a nationwide office space program, coordinating procurement actions and managing program-wide contracts, providing daily technical advice and support regarding the automated case management system and other computer-related activities, managing security, coordinating National Performance Review activities, managing the financial operation of the United States Trustee System Fund, and coordinating and developing the Program's budget and resource plan.

PROGRAM CHANGES:

Program	FY	Pos.	FTE	Amount
National Bankruptcy Research Database.....	2	1		\$115

This initiative seeks to address the following objectives:

• To provide a source of empirical data about bankruptcy to be available to the Program and the Department, the bankruptcy bench and bar, the Congress and the general public.

• To enable the Program to evaluate its performance and progress toward meeting its goals and mission using quantifiable data as a measurement tool.

This initiative requests 2 positions, 1 workyear, and \$115,000 in offsetting collections associated with the National Bankruptcy Research Database Initiative requested in the Administration of Cases Decision Unit. The request will fund 1 bankruptcy analyst/statistician position and 1 data clerk position.

The requested positions will support the establishment of a National Bankruptcy Research Database. An analyst/statistician in the Executive Office will analyze and manipulate the database to provide reports on the nationwide bankruptcy caseload, as requested by individuals both inside and outside the Program. The data clerk will support the manual entry of bankruptcy statistical data that will not be available through an electronic transfer from the Program's Automated Case Management System (ACMS).

Bankruptcy Fraud: Criminal Database Access.....	Pos.	FTE	Amount
	2	1	\$104

This request seeks to address the following objective:

to assure that violations of applicable criminal laws are referred to law enforcement and regulatory agencies.

This request includes 2 positions, 1 workyear, and \$104,000 in offsetting collections to permit the hiring and training of two personnel that would be available to perform computerized criminal database searches maintained by the Financial Crimes Enforcement Network (FinCEN) at the United States Treasury Department, as well as the databases that might be available for searches through other agencies. These computerized criminal database searches will support the Program's bankruptcy fraud activities.

One of the difficulties encountered in investigating bankruptcy fraud and referring cases for prosecution is that many of the fraudulent schemes are highly sophisticated and mobile, moving from state to state to avoid detection and ultimately prosecution. Because the Program currently has no national database, it is difficult to detect schemes such as serial filing in multiple jurisdictions.

FinCEN serves as the United States Government's source for the systematic collection and analysis of information to assist in the investigation of financial crimes. Through a combination of advanced technology and partnerships with the financial sector, FinCEN is able to identify data that will help to predict emerging trends and patterns of criminal financial activity.

This request will allow the Program to tap into FinCEN's analytical and technological capabilities or other databases that provide access to a variety of criminal and financial information that will assist in identifying fraudulent bankruptcy schemes or multiple filers across state lines and judicial jurisdictions.

Electronic Freedom of Information Act Access.....	Pos.	FTE	Amount
	1	1	\$257

This request seeks to address the following objective:

to assure that the U. S. Trustee Program is able to meet the objectives of the Electronic Freedom of Information Act Amendments of 1996.

This initiative requests 1 position, 1 workyear and \$257,000 to meet the requirements of the Electronic Freedom of Information Act amendments of 1996. The Electronic FOIA Amendments bring FOIA into the "Information Age" by requiring that agencies maintain records in forms or formats that are readily electronically reproducible, to provide better agency compliance with the time limits imposed by FOIA, and to provide for expedited processing of certain requests.

General Goal: Provide Administrative support to move cases expeditiously through the Bankruptcy Process.

General Goal: Provide Administrative support to move cases expeditiously through the Bankruptcy Process.		
PERFORMANCE INDICATOR INFORMATION		
DESCRIPTION OF KEY INDICATORS		
TYPE	KEY INDICATOR	INDICATOR SIGNIFICANCE
	Chapter 7	
Output Activity	8 Reduce the number of nonpanel trustee administering cases	Non-panel trustees are those trustees who have open cases but are not being assigned new cases. Generally, non-panel trustees are not assigned new cases because of a performance problem. Once a trustee has been removed from the panel, there is little incentive to move cases through the bankruptcy system.
Outcome	16 Reduce the number of old chapter 7 cases	This indicator tells the Program how successful it is in meeting its goal of expeditiously moving cases through the bankruptcy process. A case is defined as "old" after 3 years.
Output Activity	Chapter 11	
Outcome	12 Reduce the time needed to file a reorganization plan with the court	This indicator tells the Program how long it is taking for chapter 11 cases to develop reorganization plans and file those plans with the bankruptcy courts.
Outcome	16 Reduce the number of old cases as a percentage of total closed	This indicator tells the Program how successful it is in meeting its goal of expeditiously moving cases through the bankruptcy process. A case is defined as "old" after 3 years.
EXTERNAL FACTORS AFFECTING PERFORMANCE		
Explanation of Factor		
External Factor	Actions of the Bankruptcy Courts	The Program does not have the statutory authority to close a bankruptcy case, or to remove a trustee from a case. That authority resides with the bankruptcy court. The only recourse the Program has for dealing with a problem trustee is to remove that trustee from panel rotation, so that the trustee will not be assigned new cases. The Program must petition the court to close cases in which the debtor is not acting in good faith.
Bankruptcy Funds		The United States Trustee Program must participate in every bankruptcy case. The Program does not have the ability to decline a case, as do other funding components of the Department.
Resources		Because the Program's workload is mandatory and it cannot decline to participate in a case, the staffing resources available have a direct impact on the ability to move cases through the process.

General Goal: Maximize the Return of Estate Assets to Creditors

GENERAL									

General Goal: Maximize the Return of Estate Assets to Creditors			
PERFORMANCE INDICATOR INFORMATION			
TYPE		DESCRIPTION OF KEY INDICATORS	INDICATOR SIGNIFICANCE
		KEY INDICATOR	
		Chapter 7	
Outcome	18	Reduce the Cost of Administering Cases	The less it costs to administer a bankruptcy case, the higher the return to creditors
Outcome	19	Chapters 7/12/13 Increase the percentage distribution to unsecured priority creditors	Unsecured creditors are the last individuals to be paid in a bankruptcy case. Increasing distribution to unsecured creditors is a measure of how well the system is doing in holding down the cost of administration of bankruptcy.
Outcome	20	Chapter 11 Increase % of Chapter 11 cases with confirmed reorg. plans	Historically, only about 15 percent of all chapter 11 cases ever achieve a reorganization plan that has been confirmed by the bankruptcy court. Because the purpose of chapter 11 is to give business debtors a second chance, it is critical that the debtor develop a plan that is viable and can be implemented.
Outcome		All chapters Reduce unreasonable professional fees	Professional fees are a significant component of the cost of bankruptcy. Estate monies that are not spent on professional fees can be returned to creditors.
EXTERNAL FACTORS AFFECTING PERFORMANCE			
External Factor		Explanation of Factor	
Actions of the Bankruptcy Courts		The Program does not have the authority to reduce professional fees. It can motion the court to reduce the fees.	
Bankruptcy Filings		The United States Trustee Program must participate in every bankruptcy case. The Program does not have the ability to decline a case, as do other litigating components of the Department.	
Resources		Staffing resources have a direct impact on the Program's ability to perform its supervisory or regulatory functions. When staffing resources are low, particularly in relation to bankruptcy filings, all of the staffing efforts are aimed at simply moving the cases through the process.	

General Goal: Assure compliance with national procedures and policies and assure that violations of applicable criminal laws are referred to law enforcement and regulatory agencies.

DESCRIPTION OF KEY INDICATORS											
TYPE	KEY INDICATOR	INDICATOR SIGNIFICANCE									
Output/ Activity	8 Criminal Referrals	Violations of criminal law are referred to the U. S. Attorneys for prosecution or the FBI for further investigation. Program staff receive referrals often from outside sources in writing and perform the initial review of the complaint. If warranted, the complaint and supporting documentation are provided to the FBI and/or the U. S. Attorney's Office in the jurisdiction for further action. Program staff work closely with the staff of these agencies to explain the case, and communicate the significance of the problem.									
	11 Reduce the number of trustee audit deficiencies	This indicator tells the staff in the field how well individual trustees are doing in managing their caseload. Private trustees who are responsible for bankruptcy estates have an obligation to maintain fiduciary standards and to abide by Program policies. Trustees are audited periodically by field staff, as well as by the Department's Office of the Inspector General.									

General Goal: Assure compliance with national procedures and policies and assure that violations of applicable criminal laws are referred to law enforcement and regulatory agencies.	
PERFORMANCE INDICATOR INFORMATION	
External Factor	Explanation of Factor
Workload of other federal agencies	The ability to successfully get bankruptcy fraud cases processed depends on the workload of other agencies
Bankruptcy Filings	The United States Trustee Program must participate in every bankruptcy case. The Program does not have the ability to decline a case. The ability of the staff to dedicate time to criminal referrals is directly related to the number of bankruptcy filings per staff. When staffing resources are low in relation to filings, efforts are focused on moving the caseload through the bankruptcy process and the more time preventive case supervisory responsibilities suffice.

Less Excess Fee Collections			(3,000)
1998 Estimate	1,145	1,068	116,721

NOTE: The United States Trustee Program anticipates it will collect \$3 million more in fees than it is authorized to use in FY 1997. FY 1997 appropriations language makes those fees available for obligation October 1, 1997. The \$3 million in excess fee collections is used to partially fund 1998 enhancements.

United States Trustee System Fund
Justification of Adjustments to Base
Payroll in FY98

Adjustments to Base

Increases /Automatic, non-policy:

	FYS	Amount
<u>1998 pay raise</u>	\$1,581
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the President's Budget Request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$1,581,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$1,275,000 pay and \$306,000 benefits = \$1,581,000).		
<u>Annualization of 1997 pay raise</u>	565
This request provides for the annualization of the first quarter amount (October through December) of the 1997 pay raise to be 3.0 percent. The amount requested \$565,000 represents the pay amounts for the first quarter of the year plus appropriate benefits (\$456,000 for compensation and \$109,000 for benefits).		
<u>Administrative Salary Increase</u>	108
This request provides for an expected annual pay adjustment of administratively determined salaries for the Assistant U.S. Trustee (\$87,000 for pay and \$21,000 for benefits = \$108,000).		
<u>Accident Compensation</u>	31
This increase reflects the billing provided by the Department of Labor (DOL) for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$31,000.		
<u>Mileage Allowance Rate Increase</u>	7
The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$7,000 is requested in 1998 to cover this rate adjustment.		
<u>Correspondence Management System</u>	11
An increase of \$11,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.		
<u>Investigation/Reinvestigation</u>	1
Executive Order 10450 - Security Requirements for Government Employees requires that appointments of each civilian officer, employee in any department or agency of the Government shall be made subject to each investigation. Additionally, the request is for the purchase of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to ensure that the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.		

	<u>YVA</u>	<u>Amount</u>
General pricing level adjustments.....	...	230
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		
6 Total Increases.....	---	2,534
Decreases:		
Annualization of FY 1997 Restructuring Savings.....	(33)	(1,357)
This annualizes savings from the reductions included in the FY 1997 President's Budget for the Program's restructuring initiative.		
Total Adjustments to Base.....	(33)	1,177

JUSTICE MANAGEMENT DIVISION

* LOCATED IN JAO FOR ADMINISTRATIVE PURPOSES.

Approved: *[Signature]* Date: Nov 17, 1995

JANET RENO
Attorney General

The Department of Justice is requesting \$376,000,000 for expenses of the Assets Forfeiture Fund (the Fund) for 1998. Based on current projections, the Department estimates that the Fund will receive \$400,000,000 in interest earned on ECI balances which is not available for general operations. Receipts in the Fund in 1998 will be \$390,000,000, including \$100,000,000 in interest earned on ECI balances which is not available for general operations. Included in the 1998 budget plan is an increase of \$353,000,000 for mandatory Program Operations Expenses of the Fund. This is \$9,100,000 more than the revised estimate for 1997, primarily due to increases in equitable sharing associated with a modest increase in receipts. Also included in the 1998 budget plan is an increase of \$25,000,000 for Program Operations Expenses of the Fund. These estimates are well below 1996 and 1995 estimates. This estimate reflects the recent decline in asset forfeiture program activity by all of the program components. The annual appropriation for investigative expenses is an important element in the development of long term investigations, that will, in turn, produce new seizures and forfeitures as we attempt to investigate the use of the forfeiture sanction.

The primary purpose of the fund is to provide a stable source of resources to cover the costs of an effective asset seizure and forfeiture program, including the costs of seizing, evaluating, inventorying, maintaining, protecting, advertising, forfeiting, and disposing of property. Prior to creation of the fund in 1985, costs of these activities had to be diverted from agency operational funds. The more effective an agency was in seizing property, the greater the drain on its appropriated funds. Creation of the fund is responsible, in large measure, for the production of surplus revenues to assist in the implementation of an aggressive and well-managed forfeiture program. A secondary benefit of an aggressive and well-managed forfeiture program is that it functions effectively in its primary role, surplus revenues will not be generated.

Since the creation of the fund, the asset seizure and forfeiture program grew rapidly. The inventory of property in custody increased from 3,664 properties valued at \$115 million at the end of 1985 to over 32,000 properties valued at about \$1.9 billion at the end of 1992 (\$1.5 billion excluding cash). Since that time, the level of seizures has been declining. The U.S. Marshals Service has continued to process and dispose of assets seized in prior years. This has kept fund receipts close to projected levels. However, as of the end of 1996, there were just over 78,000 assets in custody valued at less than \$1.4 billion (less than \$1.2 billion excluding U.S. cash and properties under seizure). For at least the past eighteen months, the significant effect of this decline is that criminal organizations have hundreds of millions of dollars more in their coffers to support their illicit operations each year.

These receipts are available to pay the Program Operations Expenses, i.e., audatory expenses, of the forfeiture program, and recognize the equity of innocent parties. For 1978, the Department is estimating \$53,000,000 for these purposes. These receipts are available to pay the Program Operations Expenses, i.e., audatory expenses, of the forfeiture program, and recognize the equity of innocent parties. For 1978, the Department is estimating \$53,000,000 for these purposes. These receipts are available to pay the Program Operations Expenses, i.e., audatory expenses, of the forfeiture program, and recognize the equity of innocent parties. For 1978, the Department is estimating \$53,000,000 for these purposes.

The fund has served as a catalyst to involve more Federal, State and local investigative agencies in the forfeiture program. In 1991, the U.S. Secret Service joined the Bureau of Alcohol, Tobacco and Firearms, joined the Department of Justice's Asset Forfeiture program, and in 1992, the U.S. Customs Service joined the program. As a result of the effectiveness of asset seizure and forfeiture as Law Enforcement Agencies Subcommittees legislation that created a support important law enforcement goals, the Treasury, Postal, and General Government Appropriations Subcommittee legislation that created a separate Treasury Forfeiture Fund that became operational in 1996, replacing the Clinton Initiative Fund and pulling Treasury agencies out of the Department of Justice's Forfeiture program, making close coordination and cooperation more difficult. In 1994, the Office of Criminal Investigations, Food and Drug Administration (FDA) joined the operation and management of the fund. The funding of police and prosecutors' operations, not only the cost of criminal investigations, but also from the perspective of preserving the due process rights of citizens.

In summary, the asset forfeiture program not only represents an effective law enforcement tool against criminal organizations but also provides financial support to other federal law enforcement efforts. Without this resource, agency funds would be seriously taxed to maintain, preserve, and liquidate seized assets, and law enforcement projects supported by the fund could be curtailed or delayed. The fund could not be used to wait the possibility of another seizure. Unfortunately, this important program is in limited decline, a decline that directly benefits criminal organizations nationwide.

Assets Forfeiture Fund
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. Deleted matter is enclosed in brackets.

Assets Forfeiture Fund

For expenses authorized by 28 U.S.C. 524(c)(1)(A)(i),(B),(C), (f), and (g), as amended, \$33,000,000 to be derived from the Department of Justice Assets Forfeiture Fund.

(28 U.S.C. 524: Department of Justice and Related Agencies Appropriations Act, 1997, Public Law 104-208.)

Explanation of Changes

The deletion of "(C)" is a technical amendment that gives effect to the statutory change made by Section 114 of Public Law 104-208, dated September 30, 1996. Section 114 removed subparagraph C from the list of uses to be specified in annual appropriations acts. The effect of this change is to treat payments of awards based on the amount of a forfeiture the same as other costs of a forfeiture.

Crosswalk of 1997 Changes
(Dollars in thousands)**

Activity/Program: Assets Forfeiture Fund	1997 President's Budget Request	Congressional Action	Changes in the Estimate	1997 Appropriation As Requested
Permanent, Indefinite Authority				
1. Program Operations.....	\$403,000	...	-\$59,100	\$343,900
2. Prior Year Super Surplus.....	7,321	7,321
3. 1996 Super Surplus.....	27,000	27,000
Appropriated, Definite Authority				
4. Investigative Expenses.....	30,000	-\$7,000	...	23,000
Total Budget Authority.....	<u>433,000</u>	<u>-7,000</u>	<u>-24,379</u>	<u>401,421</u>

Explanation of Change in Appropriated, Definite Authority

Other Requested Changes:

The Congress reduced the amount of annual definite authority available for investigative expenses.

Explanation of Change in Permanent, Indefinite Authority

Changes in the Estimate:

The most significant factor resulting in a major re-estimate of permanent, indefinite expenses is a sharp decline in new seizures and forfeitures with an associated decline in new receipts to the fund. Receipts in 1996 were \$134 million, a decline of \$11 million from 1995. Receipts in 1997 are projected at \$59 million, a decline of \$75 million from 1996. Receipts in 1998 are projected at \$59 million, a decline of \$20 million from 1997. Special contract services are projected at \$40 million (a decline of \$7 million), and joint law enforcement operations are projected at \$30 million (a decline of \$3 million). Minor adjustments are reflected for other costs categories based on updated information. In addition, approximately \$7.5 million in prior year super surplus balances were not obligated in 1996, as expected, and a 1996 surplus of \$27 million was declared.

Fielded BCGI tools and interest are subject to change. As actions are approved, BCGI tools delivered by Covi Order. These actions are posted as updates (i.e., redactions to grant recipients, rather than as separate change orders). In summary, the flow is used as the "back" for the BCGI request to include proper data (real and immateriality for transactions).

Asset Forfeiture Fund
Investigative and Prosecution
Performance and Results Act Requirements
Asset Forfeiture Program

MISSION: To disrupt, damage and dismantle criminal organizations, through the use of civil and criminal forfeiture, by removing those assets that are essential to the operation of those criminal organizations, and to punish the criminals involved by denying them use of the proceeds of their crimes.

PROGRAM GOALS:

- To provide resources necessary to identify forfeitable property and to seize, manage, and dispose of property seized for forfeiture, including expenses of perfecting the forfeiture and recognizing legitimate interests of innocent third parties.
- To provide central accountability for the management and use of forfeited cash and property and the proceeds of sale of forfeited property.
- To provide the maximum level of funding authorized in support of ongoing investigations.

PROGRAM OBJECTIVES:

- To pay expenses for detention, inventory, safeguarding, maintenance of property seized for forfeiture, and the disposal of forfeited property.
- To pay case-related expenses for perfecting the forfeiture of seized property.
- To ensure that valid third-party interests are not jeopardized unreasonably in the enforcement of forfeiture statutes.
- To strengthen overall asset seizure and forfeiture efforts by funding certain program-related expenses allowable by statute.
- To promote effective law enforcement by sharing amounts realized from forfeitures with State, local, and foreign law enforcement agencies that contributed directly to the forfeiture.
- To pay awards for information and assistance leading to civil or criminal forfeitures involving any Federal agency participating in the fund.
- To equip conveyances for law enforcement purposes.
- To assist in major investigations and prosecutions by making funds available to purchase evidence of violations of the Controlled Substances Act, the Controlled Substances Import and Export Act, RICO, or criminal money laundering laws.

SAME PROGRAM DESCRIPTION:

Identifying, seizing, and forfeiting illegal assets plays an increasingly important role in the Federal Government's efforts to stop crime and punish criminals. When assets are seized, they are placed in a Federal Assets Forfeiture Fund account. Real property and other assets of the enterprise can disrupt operations severely. This, in turn, can create further difficulties for these illicit syndicates. However, not until 1985 was there a suitable funding source to cover the direct expense associated with an aggressive asset forfeiture program, such as storage, security, maintenance, liens, mortgages, auctions, and advertising. The Comprehensive Forfeiture Act of 1984, part of the Comprehensive Crime Control Act of 1984, (P.L. 98-473, title II, Chapter III), remedied this problem by creating the Assets Forfeiture Fund within the Department of Justice.

Over the Fund was in place, the Department began placing greater emphasis on the identification, location, seizure and forfeiture of assets as a standard aspect of major investigations. In addition, the Department sought and obtained authority to share forfeited assets with State and local law enforcement agencies and foreign governments that assisted in the law enforcement effort leading to the forfeiture. Today, hundreds of joint investigations involving thousands of State and local law enforcement officials are occurring across the country. Also, there are a greater number of cases involving assets in foreign countries.

After seizure, the Federal investigative agencies have a critical role in getting the legal forfeiture process started by: (1) providing personal notice to the owner, and advertising the seizure to the public; (2) handling claims for the property from owners, lienholders, and State and local agencies with an "equitable share" in the property; and, (3) if the forfeiture is uncontested, issuing a "Declaration of Forfeiture", closing out the case file, and notifying interested parties of the outcome. If the asset under seizure is real property or valued in excess of \$500,000, or if a claimant files a claim and posts a cost bond, then the case is referred to the appropriate U.S. Attorney's Office for judicial forfeiture proceedings. Following a forfeiture determination, whether judicial or administrative, there are often petitions from innocent owners that need to be investigated and answered. Finally, if the forfeited property is not transferred to a Federal, State or local agency for official use, or destroyed, it must be marketed and sold. Only then can revenues be deposited in the fund.

Depending on the type of property involved, the strength of the market, the need to address petitions, and other factors, this entire forfeiture and disposal process may take 12 to 24 months. During this process, the property must be properly maintained to protect its value and efficiently disposed of after forfeiture. Revenue generated from the sale of the property is deposited into the Assets Forfeiture Fund. The Department of Justice is responsible for the later disposition of the property and for replenishing the fund. Under current law, proceeds from forfeited assets are deposited into the Assets Forfeiture Fund and administered by the Department of Justice. There are also statutory exclusions for certain fish and wildlife seizures, the proceeds from administrative forfeitures by the non-Justice agencies, and the net proceeds from forfeitures under 1882A. Once property is sold, the equitable interest, if any, earned by direct participation in the case, is distributed to the appropriate State and local law enforcement agencies. Often, in lieu of sale or property, the property is placed into official use by a participating State and local law enforcement agency or by a Federal agency.

For several years, the Federal agencies involved in the forfeiture program worked together to build a unified Federal forfeiture program, with consistent policies and procedures applicable to all agencies. The U.S. Customs Service was the only significant forfeiture agency operating under independent authority. However, in 1993, Congress enacted a major division in the Federal Forfeiture program by creation of a Treasury Forfeiture Fund to replace the Customs Forfeiture Fund. Beginning in 1994, three Treasury law enforcement agencies formerly participating in the Department of Justice Forfeiture program (Customs, Coast Guard, and Fish and Wildlife Service) are now depositing their forfeited proceeds into the Treasury Fund. In these instances where the seizures resulted from a joint operation involving an agency participating in the Justice fund, a sharing of the proceeds with the Justice fund will occur. The reverse is also true. Efforts to coordinate the practices and policies of both forfeiture programs and funds continue in order to ensure the vitality and integrity of this important law enforcement tool.

ANNUAL PERFORMANCE GOALS:

The following performance measures have, traditionally, been identified in the fund's annual financial statements, after the close of the fiscal year. With regard to the number of assets in inventory and their value, annual objectives are not established in advance of a fiscal year in order to avoid even the appearance of targeting or a "speed trap" approach to forfeiture. The decline projected in the ratio of net income being paid out as equitable sharing reflects improved performance in recovering direct costs prior to computing equitable shares. Additional performance measures will be developed after the Consolidated Asset Tracking System (CATS) is fully implemented.

	1996 Actuals	1997 Estimate	1998 Estimate
Assets in Inventory, end-of-year.....	28,421	29,000	30,000
Value of Assets in Inventory, end-of-year.....	\$1,138,800,000	\$1,190,000,000	\$1,359,000,000
(exclusive of BCCI cash)			
Total Deposits to Assets Forfeiture Fund.....	\$334,132,735	\$375,000,000	\$390,000,000

Level of proceeds generated from the sale of forfeited property.....	\$73,506,451	\$85,000,000	\$93,000,000
Level of asset management and disposal expenses incurred.....	\$35,500,515	\$35,000,000	\$37,000,000
Ratio of asset management and disposal costs to the disposed property value.....	45.62	41.28	39.82
Ratio of Equitable Sharing Payments to Net Income.....	46.12	43.01	40.02

RECEIPTS

For 1999, the Department estimates that receipts to the fund will be about \$390,000,000, an increase of \$17,000,000 compared to the revised, lower estimate for 1997. This amount includes estimates of \$150,000,000 in forfeited cash, \$150,000,000 in proceeds from the sale of property, \$30,000,000 in interest on investments, and \$60,000,000 in miscellaneous income. The investment income includes \$15,000,000 earned from ECI cash on deposit. ECI interest earnings are subject to distribution by court order and are not available for operational costs of the fund. Factors considered in arriving at the total 1998 net income estimate include:

- (1) The level of production of Assistant U.S. Attorneys (AUSA), investigative agents, and U.S. Marshals Service (USMS) personnel in handling seizures and forfeitures, and contract personnel assisting in processing seizures. The program was declined, based upon the direction of the Attorney General to the Department, and the Department's decision to focus additional analytical effort on the forfeiture aspects of major cases. By 1998, these efforts should begin to show positive results.
- (2) The decline in seized asset inventory reflects many factors. A major factor in the decline was the concern over "double jeopardy" created by the Ninth Circuit's decision in *United States v. \$1,500,000*, 97-1522 (9th Cir. 1997). The court held that civil forfeiture of criminal property constituted "jeopardy" for purposes of double jeopardy. This decision has been cited by the Ninth Circuit in subsequent cases, and the Department is currently reviewing the impact of this decision on its forfeiture program. The Department is also reviewing the impact of the Supreme Court's decision in *United States v. \$120,000*, 97-1522 (S. Ct. 1997), which held that civil forfeiture is not a punishment and therefore does not constitute "jeopardy" for purposes of double jeopardy. This decision eliminated a major barrier to reinvigoration of the use of the forfeiture sanction.
- (3) The increased emphasis on money laundering and international forfeitures could generate substantial additional receipts annually. Hundreds of millions of dollars in illegal proceeds have been secreted overseas. If progress is made in piercing the international banking veil, more of these funds will be subject to repatriation and forfeiture. While the repatriation of assets is not currently a significant source of fund receipts, the Department has made significant progress in recent years in explaining and convincing foreign governments that such cooperation is in their best

SYSTEMS AND OPERATIONS EXPENSES

Indefinite (mandatory) authority

Management and Disposal of Seized Assets	FY 1997 Estimate	FY 1998 Estimate	Increase/Decrease
1. Management of Seized Assets	\$35,000,000	\$37,000,000	\$2,000,000

weather, important areas requiring funding in the assessment, containment, and removal of hazardous waste from seized property. The estimate for 1988 reflects an increase of \$15 million for this activity, compared to about 19.5 million in 1987. The USGS and DEA will continue to utilize the Corps for disposal of toxic and hazardous substances. The Fund has been instrumental in allowing for the development of an environmentally sensitive method for hazardous waste disposal. These costs include the expenses of packaging, transporting and destroying precursor chemicals and other hazardous materials seized at clandestine lab sites by certified hazardous waste disposal firms. The Department of Justice is also using the Army Corps of Engineers, on a reimbursable basis, to provide site surveys and assessments of environmental damage from seized properties with suspected hazardous waste contamination. The Corps also provides estimated costs for the clean up of such properties. This service facilitates more informed decisions on the forfeiture or release of such property.

Other Asset Specific Expenses

FY 1997 Estimate	FY 1998 Estimate	Increase/Decrease
\$24,000,000	\$25,000,000	\$1,000,000

Also included in this expense category is an estimate of \$11 million for expenses associated with the prosecution of a forfeiture case or the execution of a forfeiture judgment, such as advertising, travel and subsistence, court and deposition reporting, courtroom exhibit services, and expert witness costs. In forfeiture cases, the services of foreign counsel may be necessary. In this area, advertising is the single

most significant expense. Under current law, the Department must advertise each seizure three consecutive weeks in a newspaper of general circulation in the area of the seizure. This is in addition to the cost of direct notice to all putative claimants by certified mail or otherwise. Thus, this expense is directly related to the volume of seizures. In 1996, advertising expense totaled approximately \$6 million. If the volume of seizures continues to decline, advertising expense will decline. The Department projects that advertising expenses are expected to decline to only \$5 million. An increase in advertising costs is projected for 1998. It is essential that these expenses be met in order that the asset title converts properly, at the same time ensuring due process rights of citizens.

1997 Estimate	1998 Estimate	Increase/Decrease
\$170,000,000	\$180,000,000	\$10,000,000

3. Equitable Sharing Payments

Equitable sharing payments represent the transfer of portions of federally forfeited cash, and proceeds from the sale of forfeited property, to state and local law enforcement agencies and foreign governments that directly assisted in targeting or seizing the property. Most law enforcement agencies, for example, result in property forfeitures whose proceeds are shared among the participating agencies. A substantial number of cases by the Federal Bureau of Investigation (FBI) and DEA include participation by state and local law enforcement agencies. The FBI estimates that approximately 60 percent of its cases, involving about 40 percent of a net value, involve state and local agencies. For DEA, about 75 percent of its cases involve state and local agencies. The Department estimates that approximately 50 percent of the cases of the Federal, state and local agencies, the percentage of net proceeds shared increased over the years. The level of equitable sharing workload of the USAS also reflects this trend. In 1996, the USAS executed 1,327 sharings. By 1998, the number of sharings is expected to be about 28,000 per year. From 1989 through 1996, sharing payments averaged about 45 percent of net income. This percentage is increasing as federal investigative agencies are conducting fewer independent investigations. Thus, the decline in sharing since 1995 reflects the decline in overall receipts, not a decline in the rate of sharing.

1997 Estimate	1998 Estimate	Increase/Decrease
\$40,000,000	\$41,000,000	\$1,000,000

4. Special Contract Services

The Department of Justice asset forfeiture program is making extensive use of contract personnel to manage the massive paper flow associated with forfeiture. During 1996, the Department reduced significantly the number of contract personnel nationwide to perform data entry, data processing, and clerical functions. This reduction was made possible by the use of contract support, which is a more efficient way of doing the work. Automated data bases, process the terms of thousands of equitable sharing requests, or maintain the terms of thousands of forfeiture case files. For all practical purposes, the forfeiture program would grind to a halt, income to the fund would reduce to a trickle, expenses for maintenance and storage would increase, and the market value of property languishing in inventory would be adversely affected. The increase for 1998 reflects primarily rate increases instead of increased numbers of workers.

1997 Estimate	1998 Estimate	Increase/Decrease
\$36,000,000	\$18,000,000	-\$18,000,000

5. ADP Equipment

The major information system development plan initiated in 1990 should be fully implemented in 1997. From an automation viewpoint, 1997 will be a period of rapid change for the Department's information systems. The Department is currently in the process of implementing a new information management system, which will tie together all the information in the Department's information management system. Existing agency data bases will have been converted to CUIS. Operating procedures updated. System users retrained, and parallel testing concluded. For the first time, on a full-year basis, in 1997, the Department of Justice will be able to prepare complete reports on all asset forfeiture activity on a contemporaneous basis. Investigative and prosecutive agencies will be able to access the actual results of their efforts, and office, agency and Department managers will be able to assess the efficiency of the forfeiture program and estimate future program results. In addition, the Department is currently in the process of implementing a new information management system, which will tie together all the information in the Department's information management system. This system will produce more informative financial statements that reflect the full economic activity of the asset forfeiture program. Other alternatives will be pursued.

CUIS will tie several hundred locations together into a national telecommunications network, provide modern technology to perform many tasks currently done manually or to make automated tasks more efficient, eliminate redundant entry of information, provide consistency among the agencies performing the same functions, provide current information to field personnel on the status and results of their cases, integrate

limited financial analysis capabilities into the inventory management process, provide a rational process for the estimation of program income and expenses, provide a formal basis for the assessment of staffing requirements, and provide for: (1) recurring costs of operation and maintenance of the C&IS telecommunications network; (2) recurring costs of system and equipment maintenance; (3) recurring costs of user training; (4) recurring costs of the user support facility (e.g., a "help" line); and (5) data center charges in support of the network. The amount requested for 1998 represents a reduction of \$8,000,000 from 1997 estimates as the result of nonrecurring implementation costs.

	FF 1997 Estimate	FF 1998 Estimate	Increase/Decrease
Training and Printing	\$5,000,000	\$4,750,000	-\$250,000

Training on forfeiture and forfeiture-related subjects will continue to be a priority due to the constant evolution and development of asset forfeiture law and policy, and because of the addition of new staff. In 1997 and 1998, training of agents will be emphasized as part of the ongoing efforts to increase the effectiveness of the forfeiture program. The Department will continue to support the training of staff of law enforcement agencies, including the FBI, DEA, and other federal, state, and local law enforcement agencies. The Department will continue to support the training of staff of the Criminal Division and the U.S. attorneys. The Department will continue to sponsor 6-10 training conferences per year, including basic and advanced seminars for forfeiture attorneys, training courses for all support personnel, and specialized criminal and civil forfeiture courses for select judges, etc. This plan includes funding for three money laundering conferences, support for conferences put on by other federal, state, and local law enforcement agencies, and up to four international conferences. Printing costs reflect the continuing need to provide current legal advice and support by updating and distributing its forfeiture manual, and for printing numerous pamphlets directly relating to forfeiture issues, policies, and procedures.

	FF 1997 Estimate	FF 1998 Estimate	Increase/Decrease
Other Program Management Expenses	\$9,000,000	\$9,500,000	\$500,000

This category includes several types of expenses that are important to the overall management of the asset forfeiture program. This funding will be used to support the Department's efforts to improve its performance, including the acquisition of policy development and other services projects designed to improve program performance. This funding will provide travel and per diem funds for temporary duty assignments needed to correct program deficiencies. In addition, the Department recently awarded a task order contract with a national accounting services firm. When the USFS learns that seizure of a business is imminent, they will be able to prepare a task order to obtain the professional services needed to conduct a valuation of business inventory, to complete an assessment of assets and liabilities of the business, or to perform other related services to facilitate informed decisions on the management and disposition of seized assets. The Department will continue to fund the acquisition of a new computer system for the management of the Department's forfeiture program, and the Department will continue to fund the acquisition of a new computer system for the management of the Department's forfeiture program. Such audits are now also required by law. This category also includes the non personnel costs of the U.S. Marshals Service's seized asset program, now within the Business Services Division, and all administrative costs of the Asset Forfeiture Management Staff, Justice Management Division.

	FF 1997 Estimate	FF 1998 Estimate	Increase/Decrease
Contracts to Identify Assets	\$3,000,000	\$4,000,000	\$1,000,000

In 1999, the Department approved funding of \$2.9 million for fund participants to procure contracts to aid in the identification of forfeitable assets. In the past, the FBI used the funds to pay for subscription services to nationwide public records data systems, and DEA established program in field divisions to perform significant research and analysis of seized assets. This funding offers significant savings toward a goal that will enhance the Department's ability to identify and seize assets. This funding offers significant savings toward a goal that will enhance the Department's ongoing effectiveness of forfeiture as a law enforcement tool. Frequently assets obtained with ill-gotten gains are discovered only with the aid of sophisticated data bases. With more flexible authority to fund this type of service, the forfeiture program will make strides in its

The resources requested for 1993 will be used to identify assets during the investigative stage of the case where such research will enhance the effectiveness of an asset forfeiture sanction. If the government can improve upon the identification of ill-gotten assets, the insidious nature of the criminal wrongdoing can be better demonstrated and reinforced before the jury. Such evidence tends to result in stiffer penalties for hard-core criminals who may have dodged such penalties in the past by successfully concealing such assets, only to be released to continue, and finance, further criminal activities with such assets. It is just this kind of "criminal financing" that the forfeiture laws are intended to deter.

9.	Storage, Protection, and Destruction of Controlled Substances	FF 1997 Estimate \$1,000,000	FF 1998 Estimate \$750,000	Increase/Decrease -\$250,000
This is an uncontrollable asset-specific expense consisting of the costs of warehousing and guarding controlled substances, and the costs associated with the removal, transportation, and destruction of these substances. This funding was also used to purchase sites for the storage of controlled substances.				
10.	Joint Federal/State and Local Law Enforcement Operations	FF 1997 Estimate \$30,000,000	FF 1998 Estimate \$30,000,000	Increase/Decrease ...
Public Law 102-393, referred to as the 1993 Treasury Appropriation Act, amended title 28 U.S.C. 534(c), vesting one authority for the Federal Bureau of Investigation to pay for "overseas, travel, fuel, training, equipment, and other costs of state or local law enforcement officers that are incurred in a joint law enforcement operation with a federal law enforcement agency participating in the fund." Such cooperative efforts have significant potential to benefit both federal and state and local law enforcement efforts. The Department has implemented policy for the allocation of resources to this new authority, and during 1998, \$10.5 million of this authority was provided to support the Department's efforts to combat the drug trade in the Southwest. The Department's efforts to combat the drug trade in the Southwest, an additional \$9 million was set aside for continued bond and seed projects. In 1997 and 1998, providing receipts materialized as projected, a total of \$30 million is set aside for these activities. Such expenditures are fully consistent with the Attorney General's top program priorities including those efforts to reduce violent crime, and to reduce the inordinate expansion of organized crime, among others.				
	Awards for Information Leading to a Conviction	FF 1997 Estimate \$1,000,000	FF 1998 Estimate \$1,000,000	Increase/Decrease \$1,000,000

Section 116 of Public Law 104-208, dated September 30, 1996, amended the Justice Fund statute to treat payments of awards based on the amount of the forfeiture the same as other costs of a forfeiture. Historically, this authority represented less than 10 percent of award payments. Based on the reduced level of award payments in recent years, we estimate approximately \$3 million in such awards in 1998.

Assets Forfeiture Fund
Status of Congressionally Requested Studies, Reports and Evaluations

Reference: M.R. 106-106, page 19: "Review feasibility of consolidating asset management disposition contracts with vendors providing these services for both the U.S. Marshall's Service and the Department of the Treasury agency."

We understand that the committee is concerned about two issues, the timelines of disposal of forfeited assets and the high costs incurred in property management and disposal. Timeliness of disposal is a major factor in the level of costs incurred. We have compared our recent experience with property management to recent years. A report has been prepared and will be forwarded to the committee as soon as appropriate clearances are obtained. The report reflects our efforts to improve disposal times for certain categories of property but our experience is not uniform. Further, additional analysis must be completed before we can isolate the reasons for delay in those areas where delays are evident. In part, our ability to complete this analysis is dependent upon implementation of the Consolidated Asset Tracking System (CATS) this year. One of the major benefits of CATS is that it will enable more aggressive management of various properties within the forfeiture community.

The feasibility of consolidating property management functions, with the Treasury Department as less promising. The Treasury Department has no personnel at the field level, with property management and a national contractor, who are able to manage joint contracts for locally provided services. The Justice Department utilizes hundreds of contractors locally under the direction and oversight of the U.S. Marshals Service. Attempting to consolidate these two approaches directly is not practical. Consolidation with the Treasury Department is only feasible if (1) the Department of Justice turn all its property management and disposal functions over to a central, national contractor, (2) the U.S. Marshals Service turn all its property management and disposal functions over to a central, national contractor, or (3) the U.S. Marshals Service and the Treasury Department have serious reservations concerning the merger of responsibility for property management and disposal under a national contractor. Our experience is that this approach makes it difficult for the selling agency and the U.S. Attorney's Office to gain access to important information during prosecution of the case or conduct of ancillary proceedings. Further, we have had negative experiences when the national contractor has expressed reluctance over accepting responsibility for a certain property because the contractor perceives the property as affecting its profit margin adversely. This is unacceptable. The U.S. Marshals Service reluctance to accept responsibility for additional assets controlled and represented by the Treasury agency arises, while the Treasury Department reluctance to accept responsibility for the assets controlled and represented by the U.S. Marshals Service arises, from the fact that while meeting other, often competing demands for services, has created significant conflict in certain offices. Even if additional staff are made available by the Treasury, the consolidated program will place even greater demands on the Service. Also, as noted earlier, one reason Treasury sought a national contractor is because it had no staff available to manage this function in the field. The creation of a separate, field based agency (a federal service bureau) to support all federal forfeitures has not been fully explored. The major questions to be answered are how it would be staffed, how it would be managed to avoid interagency rivalries, and whether it could operate more efficiently than the current arrangement. It may not be practical if property management and disposal are to be consolidated. The U.S. Marshals Service is currently studying the feasibility of consolidating its property management and disposal functions, and meeting its six goals in improving the current practices and program controls in an attempt to keep costs under control and to improve accountability and efficiency in both funds.

CIVIL DIVISION

Approved:  Date: 7-3-90
 ALICE THOMPSON
 Attorney General

Department of Justice
Radiation Exposure Compensation
Administrative Expenses
Fiscal Year 1998

The Radiation Exposure Compensation Act of 1990 offers an apology and monetary compensation to individuals exposed to radiation released during above-ground nuclear weapons tests and uranium mining. The Act was amended by the National Defense Authorization Act for FY 1991 to include payments to individuals who participated onsite in atmospheric nuclear tests. Payments to affected individuals come from the Radiation Exposure Compensation Trust Fund authorized by the Act. Although the program activities of the Department of Defense and the predecessors to the Department of Energy precipitated the need for the Act, the Attorney General is responsible for the disbursement of the Fund and has delegated the administration of the Fund to the Civil Division's Radiation Exposure Compensation Program.

To administer the Program, the Civil Division was provided new positions and funds through a direct allocation to the General Legal Activities appropriation in 1992. In order to more effectively reflect the administrative costs associated with the program, the Civil Division requested that the Department transfer funds from the General Legal Activities appropriation. The 1993 appropriation was scored against the Defense classification and through a reimbursable agreement, was made available to the Civil Division under Object Class 25.0 (Other Services). Between 1996 and 1997, funding was reduced by \$655,000 to the current level of \$2,000,000. This decrease aligned funding more closely with actual costs incurred. Initially, a staff of 17 was hired to handle the expected deluge in claims. Currently, the program has 13 employees, including attorneys, paralegals, claims examiners, a nurse and a legal assistant.

The Program was implemented in April 1992. Through 1996, a total of 6,086 claims and appeals have been processed. While the number of receipts dropped in 1996, the complexity and the labor-intensity of the workload increased. Relatively fewer claims and appeals were found to be meritorious without additional information or verification, which required additional processing time. In 1996, 737 claims and appeals were processed, compared to 982 terminations in 1995.

Statutory and regulatory changes are being considered by the Administration which would bring the Program in line with current medical knowledge. Such changes would reverse the downward trend in receipts and claims for the next several years. Accordingly, the Civil Division will continue to require \$2,000,000 in budget authority to cover costs associated with administering the Program through 1998.

Base Program Description

The Radiation Exposure Compensation Act of 1990 offers an apology and monetary compensation to individuals exposed to radiation released during above-ground nuclear weapons tests and uranium mining. The Act was amended by the National Defense Authorization Act for FY 1991 to include payments to individuals who participated onsite in atmospheric nuclear tests. Payments to affected individuals come from the Radiation Exposure Compensation Trust Fund authorized by the Act. The Act provides for payments to individuals who developed specified diseases, based on the type of exposure: \$50,000 to individuals who lived downwind of nuclear test sites, \$75,000 to persons who participated onsite in atmospheric nuclear tests and \$100,000 to individuals employed as uranium miners.

Although the program activities of the Department of Defense and the predecessors to the Department of Energy provided the funding for the Act, the Secretary of Defense transferred responsibility for the administration of the Fund to the Department of the Interior. In March 1992, the Program published regulations structured to minimize the documentation requirements for individual claimants while providing maximum possible protection against fraud and abuse. To receive compensation, a claimant need only prove that he or she resided in one of the specified areas during the specified time period, participated in or was downwind of a nuclear weapons test or was an employee in an uranium mine and developed one of the designated ailments within a certain number of years. Additionally, should a claim be denied, a streamlined appeals process enables a claimant to seek review of a decision from the designated Appeals Officer within 60 days of the denial.

In addition to adjudicating claims and ensuring compliance with governing laws and regulations, the Program conducts extensive outreach. A team of Program staff are available on the Navajo Indian Reservation one week per month to individually respond to questions from current claimants and assist potential claimants in completing claim forms. This one-on-one contact is extremely beneficial in advising claimants of the current status of their claims, responding to specific questions and ensuring that future claimants are given the opportunity to successfully enter the Program. Representatives of the Navajo Nation routinely express their appreciation of these efforts and have requested that Program staff continue to provide this valuable service.

Outreach also includes the issuance of numerous press releases, the establishment and support of a toll-free phone line and participation in highly publicized events such as the annual Navajo Nation Fair and other community-based forums. At these events, staff members explain the Act and regulations and respond to

questions. Participants receive handouts, copies of regulations, claim forms and guidebooks. To further publicize the Program, the staff submits notices about the Program to several oncology association publications.

Other ways in which the Program has sought to facilitate the process for claimants and speed the delivery of service abound. For example, Program staff created special claims forms and guidebooks for each of the three claimant categories. Substantial effort was expended to make the forms and guidebooks easily usable by persons without an attorney. The Civil Division has fulfilled requests for over 11,000 of these claims packages. Program staff also developed release forms to obtain information from state, federal and private sources to assist claimants.

In addition, the Civil Division designed and implemented an automated system which maintains information about the claimants, victims, illnesses and radiation exposure. The system tracks actions due and completed by the staff and generates tickler reports used to manage the workload, schedule processing and assure that all cases are handled in a timely manner. The system also generates various letters and notices along with mailing labels to be sent to the claimants. Finally, the system enables the staff to provide prompt answers to the numerous status inquiries received.

1998 Resource Requirements

Work is expected to intensify through 1998 with the adoption of regulatory and statutory changes. Receipts are expected to increase 34 percent in 1998. The total number of claims and appeals processed in 1998 is expected to increase significantly, to 885. The increased number of claims processed, combined with the higher approval rates, are expected to increase awards nearly 30 percent from 1996. The current budget authority of \$2,000,000 should be sufficient to cover costs associated with outreach efforts and claims processing through 1998.

Accomplishments

More than any other Civil Division component, the Radiation Exposure Compensation Program provides a service directly to the public. Since its inception, Program managers have set performance targets which measure the Government's performance in processing claims. The Government has consistently exceeded its targets in its claims' fulfillment criteria and receive compensation. The performance targets have been set in two critical steps in the processing of claims: (1) limit the number of days between receipt of a claim and the date of the acknowledgement letter; to five; (2) limit the number of days between the date of the acknowledgement letter and the date of the initial request for information; to forty.

1. The "Acknowledgement" letter notifies claimants that a claim has been received, apprises them of their claim number and informs them of when they can expect to receive a decision. The more quickly the claimants are contacted, the more readily the most common questions are answered and the more opportunity they have to provide necessary documents and receive compensation.

2. A "request for information" letter notifies claimants of deficiencies in a claim, and informs them of the information needed to fulfill eligibility criteria and receive compensation.

In 1996, 96 percent of claimants were sent an acknowledgment letter within five days of receipt of their claims and 91 percent of claimants whose claims required additional information were notified within forty days of the dispatch of the acknowledgment letter. The program continues to strive for the optimum in service to claimants by setting performance targets of 95 percent for both indicators.

CIVIL DIVISION

Approved:  Date: 7-3-90
 DICK THOMPSON
 Attorney General

**Department of Justice
Radiation Exposure Compensation
Payments to the Radiation Exposure Compensation Trust Fund
Summary Statement
Fiscal Year 1998**

The Radiation Exposure Compensation Trust Fund was established to permit the payment of claims to individuals exposed to radiation as a result of atmospheric nuclear tests and uranium mining in accordance with the Radiation Exposure Compensation Act of 1990. The Act was amended by the National Defense Authorization Act for FY 1991 to include payments to individuals who participated onsite in atmospheric nuclear tests. The Act provides for payments to individuals who developed specified diseases, based on the type of exposure: \$50,000 to individuals who lived downwind of nuclear test sites, \$75,000 to persons who participated onsite in atmospheric nuclear tests and \$100,000 to individuals employed as uranium miners.

Although the Fund is available for disbursement only by the Attorney General, the program activities of the Department of Defense and the predecessors to the Department of Energy precipitated the need for the Act. Thus, the Department of Justice seeks appropriations on their behalf under functional classification 050 - Defense. To make payments to claimants, the Fund was appropriated \$30,000,000 in 1992; \$170,750,000 in 1993; and \$30,000,000 in 1997.

The Attorney General has delegated the administration of the Fund to the Civil Division's Radiation Exposure Compensation Program. Full-scale implementation of the Program began in April 1992. Through 1996, the Program received 5,823 claims, approved 2,660 awards totaling \$197,535,000 and denied 2,793 claims. Payments to claimants through 1996 totaled \$192,869,000. The award amounts drive the payment amounts, however, in any given year, payment totals differ from award totals due to the timing of the actual payments.

Statutory and regulatory changes are currently being considered by the Administration which would bring the Program in line with current medical knowledge. If the changes are adopted, the Program's workload and funding requirements are expected to increase in 1998 and beyond. To estimate the resource requirements for a modified Program in 1998, the Department of Justice assumes the following: (1) receipts will increase 54 percent over 1996 levels; (2) filings by miners will dominate the receipts, growing from 10 percent of the receipts in 1996 to 60 percent in 1998; (3) the number of claims and appeals processed will increase 20 percent from 1996 to 1998; and (4) the number of awards approved will increase nearly 30 percent over 1996.

Taken together, these assumptions point to the Program's approval of about 166 awards totaling \$29,575,000 in 1998. Payments in 1998 are estimated to be \$28,037,000. The balance of funds at the start of 1998, plus projected interest, is expected to be approximately \$23,656,000. Given these projections, payments will exhaust monies available in the Trust Fund in August 1998.

The Department of Justice seeks an appropriation of \$4,381,000 for 1998 under the functional classification 050 - Defense to cover projected payments to claimants in 1998. An advance appropriation of \$29,000,000 for 1999 is also sought.

1997 Appropriation Anticipated	\$30,000
1998 Estimate	\$4,381

Basic Program Description

The Radiation Exposure Compensation Trust Fund was established to permit the payment of claims to individuals exposed to radiation as a result of atmospheric nuclear tests and uranium mining in accordance with the Radiation Exposure Compensation Act of 1990. The Act was amended by the National Defense Authorization Act for FY 1991 to include payments to individuals who participated onsite in atmospheric nuclear tests. The Act provides for payments to individuals who developed specified diseases, based on the type of exposure: \$50,000 to individuals who lived downwind of nuclear test sites, \$75,000 to persons who participated onsite in atmospheric nuclear tests and \$100,000 to individuals employed as uranium miners.

The Act authorizes a permanent, indefinite appropriation of "such sums as may be necessary to carry out its purposes." Amounts appropriated are to remain available until termination of the Fund in 2012, 22 years after the date of enactment. To make payments to claimants, the Fund was appropriated \$30,000,000 in 1992 and \$10,750,000 in 1993. During 1997, \$30,000,000 in appropriations will be available -- \$16,264,000 became available October 1, 1996, and \$13,736,000 will become available September 30, 1997.

Although the Fund is available for disbursement only by the Attorney General, the program activities of the Department of Defense and the predecessors to the Department of Energy precipitated the need for the Act. Thus, the Department of Justice seeks appropriations on their behalf under functional classification 050 - Defense.

The Act requires that any award be offset by the amount of previous payments that were based on the same injuries for which the claim under the Act was submitted. Examples of these offsets are disability and survivor's payments made by the Department of Veterans Affairs (VA), litigation awards and certain payments made by the Social Security Administration (SSA). Due to these offsets, the dollar value of awards will not always be in the amounts of \$50,000, \$75,000 or \$100,000. Moreover, the acceptance of payments under the program is a final settlement of all claims against the United States. Since \$100,000 is the maximum program award, eligible claimants may prefer the financial advantages of lifetime annuities paid by the VA or SSA.

The Attorney General has delegated the administration of the Fund to the Civil Division's Radiation Exposure Compensation Program. The program was established in April 1981 when the program received \$23 million in initial appropriations. Through April 1998, the program has received \$23,656,000 in appropriations. Through April 1998, the program has paid \$197,531,000 in awards to 2,791 claimants. The award amounts drive the payment amounts, however, in any given year, payment totals differ from award totals due to the timing of the actual payments. On average, two months elapse from approval of an award, to claimant's acceptance, to payment of the award.

The President's Advisory Committee on Human Radiation Experiments, charged with investigating the history of experimentation conducted by the Federal Government during the Cold War, recommended that the Administration consider statutory and regulatory changes which would bring the program in line with current scientific knowledge. The changes are expected to increase approval rates and the number of awards in 1998 and beyond.

The projections which follow assume the adoption of regulatory and statutory changes:

- Receipts are likely to surge to \$26 in 1998 -- a 54 percent increase over 1996 levels. This higher level of receipts will continue in 1999.
- The number of claims and appeals processed in 1998 is expected to increase significantly, to 885. In 1999, processing will increase to 989 claims and appeals.
- The increased number of claims processed, combined with higher approval rates, are expected to increase awards 30 percent from 1996. About 366 awards are expected to be approved in 1998 and about 371 in 1999.
- The dominance of miner claims will become more pronounced -- an estimated 60 percent of 1998 and 1999 awards. The effect of the predominance of miner claims is an increase in the value of the average award, from \$70,000 in 1996 to nearly \$81,000 in 1998 and 1999.

Detailed workload estimates for 1998 and 1999 are included in the chart on page 9. In 1998, about 366 awards totaling \$29,575,000 are expected to be approved. Associated payments are projected to total \$28,037,000. The balance of funds at the start of 1998, plus projected interest, is expected to be approximately \$23,656,000. Given these projections, payments will exhaust monies available in the Trust Fund in August 1998. An appropriation of \$4,381,000 will be required to make payments to claimants for the remainder of 1998.

In 1999, about 371 awards totaling \$29,950,000 are expected to be approved. Associated payments are projected to total \$29,942,000. An appropriation of \$29,000,000, plus expected interest, will be required to make payments to claimants in 1999. The following chart depicts the estimated Trust Fund payments, interest earnings and balances.

CRIMINAL DIVISION

Interagency Law Enforcement
Interagency Crime and Drug Enforcement
Summary Statement
Fiscal Year 1998

The Interagency Crime and Drug Enforcement appropriation request for 1998 totals \$294,967,000. This funding will be used to support and maintain the Organized Crime Drug Enforcement Task Force (OCDETF) Program. A total of 3,015 reimbursable positions and 2,960 reimbursable workyears in 7 Department of Justice components will be funded through this appropriation. Reimbursement to participating agencies in the Department of Transportation and the Department of the Treasury is no longer included since resources will be available from other appropriation accounts in those Departments.

The OCDETF program consists of a nationwide structure of 9 regional Task Forces with participation by agency representatives from the Drug Enforcement Administration (DEA), Federal Bureau of Investigation (FBI), Immigration and Naturalization Service (INS), U.S. Marshals Service (USMS), U.S. Attorneys (USA), U.S. Customs Service (USCS), Bureau of Alcohol, Tobacco and Firearms (BATF), the Internal Revenue Service (IRS), and the U.S. Coast Guard. Attorneys from the Criminal Division and the Tax Division also provide support as required. These Task Forces utilize the combined resources and expertise of its member Federal agencies in cooperation with State and local investigators and prosecutors to target and destroy major narcotic trafficking and money laundering organizations. A multi-faceted attack on highly sophisticated drug cartels requires unique capabilities combined into a comprehensive and orchestrated investigation and prosecution. Four objectives continue to guide the selection and conduct of investigations:

- To target, investigate and prosecute individuals who organize, direct, finance, or are otherwise engaged in high-level illegal drug trafficking enterprises, including large-scale money laundering organizations;
- To promote a coordinated drug enforcement effort in each region and encourage maximum cooperation among all drug enforcement agencies;
- To work fully and effectively with State and local law enforcement and prosecution agencies; and
- To make full use of financial investigative techniques, including tax law enforcement and forfeiture actions.

The OCDETF Approach

The management hierarchy of the OCDETF Program consists of the Assistant Attorney General -- Criminal Division, the Executive Office for OCDETF, the OCDETF Washington Agency Representatives Group (WARG), the OCDE Core City United States Attorneys, and members of the OCDETF Coordination Groups.

Headquarters and Field Organization

The Attorney General has delegated policy and administrative management and oversight for the OCDETF program to the Assistant Attorney General for the Criminal Division. In cooperation with headquarters representatives from the participating agencies, the Criminal Division monitors OCDETF activities nationwide; resolves program and policy issues that arise; and provides resource information to the Attorney General and the Deputy Attorney General. Primary oversight is provided by the WARG, chaired by a Deputy Assistant Attorney General and composed of senior managers from each member agency. It provides regular coordination and special multi-regional operational coordination, shares information on agency program management, and prepares issue and policy papers. A small administrative staff (known as the OCDETF Executive Office) located in the Criminal Division serves as the repository of information relating to OCDETF issues, and supports headquarters and field OCDETF activities by collecting and maintaining OCDETF statistics and managing OCDETF funding.

Within each of the OCDETF regions, one judicial district accepts responsibility for management of the OCDETF program within the region. Although this responsibility does not convey line authority over other U.S. Attorneys or over the personnel of investigative agencies, it does carry a duty to emphasize OCDETF activities in the region, and facilitate interaction among the various agencies and representatives of districts in the region. An OCDETF Regional Advisory Committee is composed of all the U.S. Attorneys within the region, the regional AUSA Coordinator, each agency's regional Coordinator, and the senior representatives of the investigative agencies throughout the region. This committee assists the U.S. Attorney charged with overseeing OCDETF activities within the region, ensuring compliance with policies and procedures set forth in the OCDETF Guidelines, and in otherwise developing effective strategies for responding to local, regional, and national drug trafficking threats.

The OCDETF Regional Coordination Group, generally housed in the U.S. Attorney's office, is composed of the lead AUSA and a Coordinator from each of the participating Federal investigative agencies. The Coordination Group serves all districts within a region. It is by decision of this body that cases throughout the region are approved. It is in response to their judgment that funding is allocated to State and local officers who assist in the investigation of OCDETF cases. It is through their activities that interagency, inter-district, and inter-regional cooperation is obtained and coordinated. The Regional AUSA Coordinator chairs the Coordination Group and maintains communications among OCDETF districts, across regions, and between the regions and the administrative staff in Washington.

The direction of a complex, multi-agency investigation carried on by skilled Federal and State/local agents need not be dictated by any one agency. Although the agency that first recommended the investigation generally plays the primary role in its management, the Coordination Groups draw upon the experience of all the participants. OCDETF investigators and attorneys are not limited to making a case based on one agency's jurisdiction. Rather, they have the opportunity to use the strongest statutes available. The data bases from which information can be obtained and the agencies' ability to use it is vastly expanded. The various Federal information systems, as well as State and local data bases, are available and easily accessed. More personnel strength and broader expertise in highly technical areas are available. The Coordination Group also provides a framework within which investigations can be simultaneously pursued in several parts of the country. Each Coordination Group has points of contact with its counterpart in the other regions. Thus, contacts are not between strangers, but between persons who view themselves as members of the same national priority program.

State and Local Participation

From the program's inception, State and local law enforcement elements have worked closely with OCDETF. The OCDETF Guidelines promote the coordinated involvement of State and local authorities in investigating, apprehending, and prosecuting major drug traffickers and their organizations. The increase in State and local participation significantly expands the available information and resources and broadens the choice of venue for prosecution.

Four features facilitate such coordination within the OCDETF program. First, States and local agencies are eligible for reimbursement from the Federal Government for designated expenses incurred when they participate in OCDETF cases. Second, State and local enforcement officials can be deputized as Federal officers under appropriate circumstances. Third, the OCDETF program facilitates the cross-designation of attorneys, with designated Federal attorneys participating in State prosecutions and State attorneys in Federal prosecutions. Finally, State and local law enforcement agencies benefit from their participation in OCDETF through the equitable sharing of asset seizures and forfeitures from these cases.

On an annual basis, OCDETF enters into approximately 1,200 agreements with State and local governments nationwide involving more than 6,000 State and local officers. Although local agencies continue to pay the salaries of their investigators who work on OCDETF cases, they are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

In 1997, the Department of Justice Assets Forfeiture Fund (AFF) provided \$5.3 million in funding for this program. The Treasury Department is providing an additional \$1 million from its asset forfeiture fund for State and local officers who participate in OCDETF cases sponsored by one of the three Treasury bureaus.

Regional Restructuring

On December 3, 1996 the Department of Justice received notification that the appropriate Congressional Committees had concurred with the reorganization plan for the OCDETF Program. This plan realigns the regions to respond more effectively to current and emerging drug trafficking patterns, to cluster district with common problems, and to enhance communications and coordination within and among regions. The result of this realignment is a reduction in the number of OCDETF regions from 13 to 9.

As the architects and principals of this plan, the United States Attorneys are in the process of formalizing plans to establish Advisory Councils in each of the new OCDETF regions. The Advisory Councils include United States Attorneys and Special Agents-in-Charge for the OCDETF agencies within each region, who will assume primary responsibility for the successful implementation of the restructuring. Together, they will address cross-cutting drug trafficking issues and work to formulate coordinated and aggressive regional and national strategies for strengthening the Federal, State and local law enforcement response.

The Advisory Councils will choose the location of the OCDETF Core City that will serve as the central site for coordination and communication within the region, among other regions, and with the OCDETF Executive Office. They will also select the Assistant U.S. Attorneys and agency representatives who will comprise the Regional Coordination Group. This group will provide full-time support to the Advisory Council in the administration of the OCDETF Program, including the coordination and analysis of regional drug trafficking patterns and trends.

The 1998 request consists of four budget activities incorporating the resources of 7 member agencies. Resource requests for 1998 for these activities are summarized below.

Law Enforcement

This activity provides resources for the investigations conducted by OCDETF members. The total resources requested in 1998 are 1,920 reimbursable positions (1,418 agents), 1,907 reimbursable workyears and \$200,041,000. The focus of OCDETF investigations is on the organized criminal enterprise leadership involved in drug trafficking and the breakup of the infrastructure of organized criminal enterprises. This includes the seizure and forfeiture of assets of organized criminal enterprises involved in narcotics trafficking. This activity provides resources to reimburse law enforcement agencies in the Department of Justice for investigative activities related to OCDETF.

Drug Intelligence

The drug intelligence request for the OCDETF program in 1998 totals 176 reimbursable positions (64 agents and 71 intelligence analysts), 176 reimbursable workyears, and \$13,971,000. This activity includes resources to maintain Regional Drug Intelligence Squads (RDIS) in eight cities. The squads will gather and disseminate raw data for strategic, operational and tracking intelligence purposes and provide regional intelligence linkage to the National Drug Intelligence Center (NDIC) and member agency headquarters.

Prosecution

The prosecution activity request for the OCDETF program in 1998 totals 907 reimbursable positions (499 attorneys), 865 reimbursable workyears, and \$79,447,000. This funding is utilized for the U.S. Attorneys, the Criminal Division and the Tax Division for their investigative support and prosecutorial efforts toward OCDETF cases. Litigation efforts are targeted selectively on the criminal leadership involved in drug trafficking and are intended to dissolve organized illicit enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

Administrative Support

The administrative support activity request for the OCDETF program in 1998 totals 12 reimbursable positions and workyears, and \$1,508,000. This activity provides policy guidance, central coordination, and administrative support to the headquarters and regional participants of all member agencies.

Interagency Law Enforcement
Interagency Crime and Drug Enforcement
Justification of Proposed Changes in Appropriation Languages

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.]

Interagency Crime and Drug Enforcement

For necessary expenses for the detection, investigation, and prosecution of individuals involved in organized crime drug trafficking not otherwise provided for, to include intergovernmental agreements with State and local law enforcement agencies engaged in the investigation and prosecution of individuals involved in organized crime drug trafficking, (8359,430,000) and of which \$50,000,000 shall remain available until expended. Provided, That any amounts obligated from appropriations under this heading may be used under authorities available to the organizations reimbursed from this appropriation: Provided further, That any unobligated balances remaining available at the end of the fiscal year shall revert to the Attorney General for reallocation among participating organizations in the succeeding fiscal year, subject to the reprogramming procedures described in Section 806 of this Act.

(Department of Justice Appropriations Act, 1997.)

\$284,967,000

Examination of changes
 No substantive changes proposed.

Interagency Law Enforcement
Interagency Crime and Drug Enforcement
Program Performance Information
General Performance and Results Act Requirements

Mission:

The mission of the Organized Crime Drug Enforcement Task Force (OCDETF) program is:

- To target major drug trafficking and related crime organizations;
- To mobilize the optimum combination of Federal, State, and local law enforcement for conducting complex long-term investigations of the activities of those organizations; and
- To successfully prosecute violators of the criminal drug and related crime statutes.

Organizational Goals and Objectives:

The goal of the OCDETF program is to dismantle or disrupt major drug trafficking and related crime organizations by taking it out of existence or by causing significant interference in the conduct of its business.

The objectives of the OCDETF program are:

1. Target, investigate and prosecute individuals who organize, direct, finance, or otherwise engage in high-level illegal drug trafficking and related crime organizations;
2. Promote a coordinated drug enforcement effort within each region and between regions, and encourage the maximum cooperation and coordination among the United States Attorney Offices and all Federal drug and drug-related law enforcement agencies;
3. Work fully and effectively with State and local law enforcement and prosecution agencies; and
4. Make full use of financial investigative techniques, including money laundering and tax enforcement and forfeiture actions against assets obtained as a result of illegal drug trafficking or related criminal activity.

Interagency Law Enforcement
Interagency Crime and Drug Enforcement
Program Performance Information
(Dollars in thousands)

ACTIVITY: LAW ENFORCEMENT

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	2,670	2,639	\$267,111
1998 Base	1,920	1,907	200,041
1998 Estimate	1,920	1,907	200,041
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Law Enforcement activity has a base of 1,920 positions, 1,907 FTE, and \$200,041,000. These resource levels reflect the transfer in 1998 of resources for all participating agencies in the Departments of Transportation and the Treasury to other appropriation accounts. The transfers result in a base adjustment of -750 positions, -732 workyears, and -\$74,442,000.

OCDETF investigations focus on the leadership of major organized criminal enterprises involved in drug trafficking and the breakup of the enterprises' infrastructures, including the seizure and forfeiture of assets of organized criminal enterprises involved in narcotics trafficking. This activity provides resources to reimburse law enforcement agencies in the Department of Justice for OCDETF investigative and prosecutive activities.

The coordination of investigative and prosecutorial activities and the sharing of information are at the heart of the OCDETF approach. OCDETF principles reflect a recognition of the drug trafficking problem as one demanding a national and international approach and a realization that localized programs alone will not suffice because most drug trafficking cases represent only one piece of a much larger puzzle. In an environment in which large-scale drug trafficking networks can involve multi-national suppliers, sophisticated money launderers, and multiple domestic distribution organizations, an approach based on coordinated activity and shared information is imperative.

Major drug trafficking organizations routinely violate many different statutes in multiple jurisdictions. The expertise of agencies with a variety of skills and missions, operating effectively across jurisdictional boundaries, is essential to the OCDETF approach.

Participating investigative agencies from the Department of Justice include the Drug Enforcement Administration (DEA), the Federal Bureau of Investigation (FBI), the Immigration and Naturalization Service (INS), and the U.S. Marshals Service (USMS).

- DEA's narcotics investigative experience, knowledge of drug distribution organizations, and close working relations with State and local authorities are essential to OCDETF.

- The FBI brings to OCDETF the ability to gather and analyze intelligence data, to deploy and manage sophisticated electronic surveillance and undercover operations, and skills in targeting organized criminal enterprises.
- INS Investigation Division personnel identify, investigate and assist in the prosecution of members of drug trafficking and related enterprises who are foreign nationals or aliens illegally in the United States, thereby effecting the dismantling of those organizations.
- USMS provides an OCDETF coordinator in each region to ensure that adequate resources and support are available for preventing jury tampering and disruption in the courtroom; managing asset seizures and forfeitures; and apprehending OCDETF fugitives.

Although funding to support the participation of investigative agencies in the Department of Transportation and the Treasury is proposed for transfer to other appropriation accounts in 1998, the continued effective use of the expertise of these components is an indispensable tool in the OCDETF program.

The Department of Transportation participates in the OCDETF program through the U.S. Coast Guard. In coastal regions, Coast Guard coordinators provide valuable intelligence and guidance on cases with maritime connections and they serve as liaison with the military services.

Participating Department of the Treasury agencies include the Bureau of Alcohol, Tobacco and Firearms (BATF); the Internal Revenue Service (IRS); and the U.S. Customs Service (USCS).

- BATF's special role in enforcing Federal firearms, explosives, and arson laws gives the program access to special expertise in dealing with drug traffickers who are well-armed and increasingly prone to violence.
- IRS actively participates in OCDETF cases through its investigation of tax-related violations of the Internal Revenue Code. IRS's Criminal Investigation Division also investigates money laundering operations, enforces major provisions of the Bank Secrecy Act, and assists in asset seizure and forfeiture actions.
- USCS is a major interdictive agency for drug shipments entering through all ports of entry into the United States. Along with IRS, USCS is also effective in conducting financial investigations. Through the analysis of computer data collected under the Bank Secrecy Act, USCS has the capacity to track the international movement of cash, persons, and commodities.

ACTIVITY: DRUG INTELLIGENCE

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	176	176	\$13,618
1998 Base	176	176	13,971
1998 Estimate	176	176	13,971
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Drug Intelligence activity has a base of 176 positions, 176 FTE, and \$13,971,000.

The Regional Drug Intelligence Squads (RDIS) were first funded through the OCDEF appropriation in 1993. The mission of the RDIS is to gather, analyze, and disseminate raw and processed data for strategic, tactical and operational intelligence support of drug trafficking investigations. These squads provide the regional intelligence linkage to the National Drug Intelligence Center (NDIC) and to respective agency headquarters.

Participants in the RDIS program include State and local law enforcement agencies, the FBI, DEA, USCS, IRS, INS, BATF, the USMS, the Department of Defense, and the National Guard Bureau. Resources support existing squads in Los Angeles, New York City, Washington, D.C., Houston, Miami, Phoenix, Chicago, and Atlanta.

The Department of Justice's Office of Investigative Agency Policies (OIAP) is in the process of refining the mission, goals, objectives, and implementation plans for RDIS and the NDIC within the context of the total intelligence program.

ACTIVITY: PROSECUTION

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	907	865	\$77,232
1998 Base	907	865	79,447
1998 Estimate	79,447
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Prosecution activity has a base of 907 positions, 865 FTE, and \$79,447,000.

This funding is used to reimburse the Department of Justice U.S. Attorneys, Criminal Division, and Tax Division for their investigative support and prosecutorial efforts on OCDEF cases. Litigation efforts are targeted selectively on the criminal leadership involved in drug trafficking and are intended to dissolve organized illicit enterprises. This includes activities designed to secure the seizure and forfeiture of the assets of these enterprises.

The fundamental purposes of the prosecution effort are: (1) to maximize the effectiveness of limited Federal resources by focusing prosecution on targets whose removal would result in the greatest and most lasting effect against the nation's drug abuse problem; and (2) to enhance prosecutive effectiveness by building upon previous experience.

The prosecution activity employs several methods particularly well-suited for use against priority targets. Among them are use of Continuing Criminal Enterprise (CCE) and Racketeering Influenced Criminal Organization (RICO) statutes; increased concentration of financial investigations; expanded use of electronic surveillance and undercover operations; and vigorous enforcement of asset forfeiture statutes. Utilization of these investigative/prosecutive tools, supplemented by the enhanced sentencing guidelines, has been instrumental to the success of the OCDETF effort.

(The United States Attorneys)

One of the principles of the OCDETF program is early attorney involvement in the development of case strategy. OCDETF prosecutors are available to provide the necessary legal services and counsel that investigators require. They are not expected to rush cases to completion, but rather to move deliberately toward successful and comprehensive conclusions. Cases handled by OCDETF attorneys are typically more complex and long-term than those of their non-OCDETF counterparts. The thrust of OCDETF prosecution is to encourage the maximum level of cooperation at the district, regional, national, and international level by having the U.S. Attorneys coordinate the activities of the agencies participating in the program.

The OCDETF program implements a major Administration initiative to combat organized crime and drug trafficking requiring continuing and intensive participation by AUSAs in the development of investigative and litigative strategy to ensure that the evidence growing out of investigations will be complete, conclusive, proper and admissible.

(Criminal Division)

The OCDETF initiative against organized drug traffickers has increased the demands on the Criminal Division to provide certain types of prosecutorial assistance and to participate directly in the development of particular cases.

Many OCDETF investigations depend upon electronic surveillance to obtain evidence on the activities of wrongdoers. Pursuant to 28 U.S.C. 2518, all electronic surveillance must be authorized by the Attorney General or a designated Assistant Attorney General. Before authorization, all Title III applications are reviewed by the Criminal Division Office of Enforcement Operations (OEO), and a recommendation is made to the Assistant Attorney General. Following authorization of a wiretap or wireless interception of communications, reports must be collected and reviewed on the fruits of the surveillance.

In addition to employing electronic surveillance techniques, many OCDETF prosecutions rely on witnesses whose personal safety is endangered by criminal elements. The Criminal Division reviews all prosecutors' requests to ensure that the witness meets the qualification requirements of the program and then makes a determination as to the level of protection to be afforded to the witness.

In addition, Criminal Division litigators often lead or assist in the prosecution of OCDETF cases when requested by a U.S. Attorney's office or an investigative agency.

(Tax Division)

The Tax Division provides nationwide review and coordination of all tax changes in OCDETF cases. Experienced Tax Division attorneys, each assigned as a liaison official to one of the OCDETF regions, work closely with coordinators and with the AUSAs and IRS Special Agents. These Tax Division attorneys provide advice, guidance, and expertise in developing and handling OCDETF investigations involving tax crimes.

In addition to assisting in individual case development, Tax Division liaison attorneys train new AUSAs and OCDETF investigators in tax matters. They attend regional conferences to participate in panel discussions on narcotics/tax prosecutions. The liaison attorneys communicate frequently with regional IRS coordinators to keep abreast of new developments which might be of particular importance not only to the Tax Division but to other drug enforcement components. The Tax Division has also maintained a clearinghouse of legal and investigative materials and information, and coordinates the dissemination of this information to regional personnel.

ACTIVITY: ADMINISTRATIVE SUPPORT

	Perm. Pos.	FTE	Amount
1997 Appropriation Enacted	12	12	\$1,469
1998 Base	12	12	1,508
1998 Estimate	12	12	1,508
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Administrative Support activity has a base of 12 positions, 12 FTE, and \$1,508,000.

The OCDETF Executive Office provides policy guidance, central coordination, and administrative support to member agencies at headquarters, regional and district levels. The Executive Office has day-to-day responsibility for providing administrative support to the regions and is responsible for financial management oversight, records management, administering the State and local overtime program, and maintaining the Management Information System.

The Executive Office responds to information requests from the Attorney General, Deputy Attorney General, Assistant Attorney General of the Criminal Division, member agencies, and the United States Attorneys. The Executive Office conducts site visits to discuss OCDETF program issues and activities and to solicit feedback on issues and concerns of regional committees, attorneys, and investigative agents.

The OCDETF Management Information System provides the data necessary to evaluate OCDETF program performance which is used in reports to the Attorney General, the President, Congress, and the public. The Case Monitoring System consists of three standard reports: Investigation Initiation; Indictment/Information; and Disposition/Sentencing. Other monitoring reports include Investigations/Prosecution Status Reports and various activity reports.

Performance Measurement Information

Since 1982, the Organized Crime Drug Enforcement Task Force (OCDEF) program has demonstrated its proficiency and diversity as an integral element of Federal law enforcement efforts, not only against drug traffickers, but also against violent offenders, gangs, money laundering organizations, and corrupted public officials. During 1998, OCDEF continued to achieve significant successes against these offenders.

In 1998, the OCDEF program initiated 588 investigations resulting in 1,495 cases filed, and charges lodged against 4,668 defendants. During 1998, 3,945 defendants were convicted and 3,492 were sentenced to prison as a result of OCDEF case prosecutions. The conviction rate was 83.9 percent and 88.5 percent of the guilty defendants were sentenced to prison.

Selected Cases Samples:

Operation White Dove: This operation led to the October 16, 1998, conviction of Juan Garcia Abrego on all counts contained in a sweeping indictment charging that Garcia Abrego operated a Continuing Criminal Enterprise (CCE) of drug trafficking, money laundering, and bribery of a public official. Garcia Abrego now stands convicted of importing tonnage quantities of cocaine and marijuana into the United States over the ten year period from 1985-1995, and subject to life imprisonment. The jury also found that \$350 million of his assets are subject to forfeiture. Since 1988, this OCDEF investigation has resulted in the seizure of more than 13,000 kilograms of cocaine and more than \$67 million in drug proceeds, all of which were attributed to the Abrego drug organization. Garcia Abrego's alliance with Colombia's Cali cartel and his close ties with corrupt officials enabled him to forge a powerful criminal organization operating on both sides of the U.S./Mexican border. This case was investigated by the FBI, the IRS Criminal Investigation Division, DEA, the U.S. Customs Service, the Texas Department of Public Safety, and prosecuted by the United States Attorney's Office for the Southern District of Texas, with the cooperation of the Mexican Attorney General's Office. This 8-year effort brought down the leader of an organization that distributed drugs to most of the major urban areas throughout the United States and protected its enterprise through corruption and violence.

Operation Crackshot: This Midwest OCDEF operation resulted in the conviction and/or cooperation of over 70 individuals connected with gangs trafficking crack cocaine and victimizing the public housing projects of Peoria, Illinois. The combined investigative expertise and resources of the FBI, IRS, U.S. Marshals Service, Illinois State Police, Peoria County Sheriff, and City of Peoria Police, was focused on two large Chicago-based drug trafficking organizations, the "Gangster Disciples" and the "Vice Lords." Crackshot was coordinated with similar OCDEF cases in Chicago and elsewhere. Violent crime in the Peoria housing projects was down approximately 70 percent this past winter.

Operation Comenciones: In South Florida, following a 2-year OCDEF/MDTA investigation by the U.S. Attorney's Office, U.S. Customs Service and the DEA, 58 individuals were charged with RICO (18 U.S.C. §§1961-68), and federal narcotics and money laundering offenses. The indictment charged the leadership of the Cali Cartel, Miguel Rodriguez-Orejuela, his brother Gilberto Rodriguez-Orejuela, Helmer Herrera-Buitrago and Jose Santacruz-Londono, and their lieutenants, advisers and underlings, with importing and distributing more than 20 tons of cocaine; obstructing justice; murder of a cooperating witness; and the laundering of narcotics trafficking proceeds. The indictment charges several attorneys with arranging for representation and substance payments for arrested cartel workers in exchange for their agreeing not to cooperate and to falsely exonerate the cartel leadership; relaying threats from the leadership to the arrested workers; falsifying documentary evidence for use in a civil forfeiture trial, among other criminal acts. This investigation has severely impaired the operations of the cartel and has removed many of its critical players in the United States.

Zorro II: On May 2, 1996, Federal, State and local agents concluded the second phase of an OCDETF law enforcement operation code-named "Zorro." This operation targeted a Mexican-run cocaine smuggling and distribution network in the United States and the Colombian cartel with which it worked. This Operation is a significant narcotics operation because it simultaneously dismantled the organization that owned the cocaine and a second organization that ran the transportation system. It represented the first coordinated multi-district enforcement action taken as part of the Southwest Border Initiative.

Approximately 130 individuals were charged with offenses relating to the importation and distribution of cocaine. Twenty-nine persons were charged in documents made public in Chicago and Midland, Texas. Fifteen of the individuals were arrested in Los Angeles, Chicago, El Paso, Houston and Midland. More than 90 court-authorized wiretaps were used in the investigation. To date 5,598 kilograms of cocaine powder, approximately three quarters of a kilogram (730 grams) of crack cocaine and 1,018 pounds of marijuana were seized in connection with the operation.

Over 40 State and local police agencies, the DEA and the FBI and seven other Federal agencies across the country combined resources and expertise in this cooperative effort. Prosecutors in the field also worked with these Federal, State and local investigators. The coordination and support provided by the Criminal Division's Narcotics and Dangerous Drug Section and the Office of Enforcement Operation was also critical to the enforcement actions taken in this operation.

Performance Measurement Exhibits

A transfer of non-Department of Justice member agency resources is proposed in 1998. Because the performance information presents in the following exhibits represents an aggregation of workload from all participating agencies, the resources for the agencies impacted by this transfer will be reflected throughout the performance measurement tables.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL: 1. Target, investigate, and prosecute individuals who organize, direct, finance, or are otherwise engaged in high-level illegal drug trafficking and related drug crime organizations.

1/ Data extracted from OCDETF Case Management System. FY 1996 data is based on information received through January 14, 1997. Approved OCDETF investigations are defined in the OCDETF Guidelines and in the OCDETF Management Information System Manual as "umbrella" activities which include multiple agency cases, agency investigative matters, United States Attorney matters and indictments as defined by the agencies and the United States Attorneys' offices. Agencies and the United States Attorneys' offices maintain activity tracking systems at a level of greater detail than the OCDETF system. For reporting purposes, OCDETF uses the terminology "investigation initiated" to mean the process of identifying, documenting, reviewing, approving and reporting investigations that meet OCDETF criteria.

2/ Represents data extracted from the Executive Office for United States Attorneys (EOUSA) Case Management System. FY 1996 data represents information received through end of September, 1996. FY 1997 and FY 1998 targets are estimated based on FY 1996 straightline projections.

A. Definitions of Terms or Explanation for Indicators:

The general goal of the OCDETF program is to dismantle or disrupt targeted drug trafficking and related crime organizations, by taking them out of existence (or by breaking them up to the extent that reconstruction of the same criminal organization is impossible) or by causing significant interference in the conduct of business by the targeted criminal organizations.

Violent Crime Activity

Violent drug trafficking organizations have become aggressively active across broad sections of the country. Structured organizations are currently operational across OCDETF regional lines and trends indicate that this expansion will continue. It has become necessary to expand and enhance current enforcement structures in order to thwart this expansion and reduce the harm they cause.

With the escalation of drug-related violence, OCDETF has focused on criminal organizations which use or threaten to use harmful means to conduct their criminal drug related activities. There are violent drug trafficking organizations which are very properly OCDETF targets. In the May 1994 OCDETF Violence Survey, the United States Attorneys' Offices reported that 20% of all OCDETF investigations involved organizations which demonstrated actual violence during the course of the criminal activity for which OCDETF was investigating them. It was also found that an additional 32% of the OCDETF investigations demonstrated potential violence.

Organized gangs involved in violent crime as well as drug trafficking are a high priority for OCDETF. Three conditions must be present if a violent crime initiative is to fit into the OCDETF pattern: 1) there must exist a nexus between the narcotics trafficking and the violence; 2) the violence must be organizational or gang-related such as Crips and Bloods rather than some individual crime spree; and 3) it must be determined that the OCDETF approach represents the most effective method to deal with the organizational problem that has been identified.

B. Factors Affecting FY 96 Program Performance.

EXTERNAL FACTORS:

OCDETF Caseload Decline

FY 1993 represented the OCDETF program's high-water mark in terms of resources. From that point to FY 1996, the work-year level has declined by 13 percent and funding by nearly 7 percent. While the erosion of base resources can be tied directly to the workload decline, there are also other reasons.

The number of OCDETF case initiations have been decreasing over the past several years. There were 857 cases initiated in 1993, 726 in 1994, and 637 in 1995. As of January 14, 1997, 387 case initiations have been reported for 1996. This is not a reflection that there is less being done in the program, but rather a reaffirmation that OCDETF cases focus on disrupting or dismantling major drug trafficking organizations. By their very nature, OCDETF cases are intensive,

long-term efforts characterized by careful coordination between prosecutors and investigators. In the last few years, the OCDETF program has concentrated its efforts and resources on a fewer number of the most complex and high-level drug organizations, rather than cases against single defendants.

More frequently, we are seeing a greater number of multi-district OCDETF cases, linking the investigation of an organization's cells that span across the entire United States. In order to achieve the goal of dismantling major drug trafficking organizations, OCDETF cases typically continue for several years rather than several months. The increasing complexity of cases requires a greater emphasis on financial analyses, such as money laundering and tax crimes, and the use of Title III investigations than in the past. It is through these means, that the financial and command centers of major drug operations may be destroyed, and the strongest case possible made against their leaders.

The most effective way to accomplish this objective is to coordinate the investigation and prosecution of all levels of a targeted organization -- from the top level managers to the street dealers. Thus the goal is not to tally up numbers regardless of impact upon the organization, but rather to structure investigations and prosecutions to disrupt and destroy the organization.

Better intelligence, additional and more complex investigations, and increasing numbers of trials and appeals have placed growing demands on the OCDETF program overall. OCDETF-related investigations are much more labor intensive in nature than routine investigations. The complexity/intensity and quality of investigations has exploded at a time when resources are also on the decline.

Internal Streamlining Activities

Consistent with the government-wide mandate for streamlining, the OCDETF program continues to work diligently to identify areas for policy, procedural, operational and administrative improvement, to reduce administrative burdens and costs borne by both headquarters and field components.

OCDETF Regional Restructuring

On August 2, 1996, the Attorney General approved a proposal to reduce the number of OCDETF regions from thirteen to nine. On December 3, 1996 the Department received final notification that Congress had concurred with the regional reorganization plan. The original scheme of thirteen regions, devised in 1983, is no longer the most meaningful configuration. The revised regional structure is intended to respond more effectively to current and emerging drug trafficking patterns, to cluster districts with common issues and drug trafficking threats, and to enhance communication and coordination within and among districts. The new plan also complements the current and proposed locations of HIDTAs.
